about territory are captured in seven rules some of which are intuitive while others contradict conventional wisdom Rather than anticipating the transcendence of the territorial states this book argues that the unmistakable direction of international politics is toward encompassing ever more physical space as the territory of states

**Economies of Signs and Space** Scott Lash, John Urry, 1993-12-09 This is a novel account of social change that supplants conventional understandings of society and presents a sociology that takes as its main unit of analysis flows through time and across space Developing a comparative analysis of the UK and US the new Germany and Japan Lash and Urry show how restructuration after organized capitalism has its basis in increasingly reflexive social actors and organizations The consequence is not only the much vaunted postmodern condition but also a growth in reflexivity In exploring this new reflexive world the authors argue that today's economies are increasingly ones of signs information symbols images desire and of space where both signs and social subjects refugees financiers tourists and financiers are mobile over ever greater distances at ever greater speeds
