Lost Paradises And The Ethics Of Research And Publication:

Lost Paradises and the Ethics of Research and Publication Francisco M. Salzano, A. Magdalena Hurtado, 2003-11-20 In 2000 the world of anthropology was rocked by a high profile debate over the fieldwork performed by two prominent anthropologists Napoleon Chagnon and James V Neel among the Yanomamo tribe of South America The controversy was fueled by the publication of Patrick Tierney's incendiary *Darkness in El Dorado* which accused Chagnon of not only misinterpreting but actually inciting some of the violence he perceived among these fierce people Tierney also pointed the finger at Neel as the unwitting agent of a deadly measles outbreak Attracting a firestorm of attention Tierney's book went straight to the heart of anthropology's most pressing questions What are the right ways to study a tribal people How can scientists avoid unduly influencing those among whom they live What guidelines should govern the interactions economic social medical and sexual between a scientist in the field and the people being studied This volume represents anthropology's thoughtful measured reply to the issues raised by this heated controversy Placing the dispute within the context of ongoing debates over the ethics of biomedical research among human populations the contributors to this volume discuss how the interaction between investigators and their subjects can most sensibly be governed They consider the responsibility of the media in disseminating anti scientific and pseudo scientific views and how scientists might best educate journalists to enable them to effectively educate others In the wake of what was widely construed as a major scientific scandal this landmark volume lays out in detail the principles and ground rules of anthropological and scientific fieldwork

Inventing the Thrifty Gene Travis Hay, 2021-09-10 Though First Nations communities in Canada have historically lacked access to clean water affordable food and equitable health care they have never lacked access to well funded scientists seeking to study them Inventing the Thrifty Gene examines the relationship between science and settler colonialism through the lens of Aboriginal diabetes and the thrifty gene hypothesis which posits that Indigenous peoples are genetically predisposed to type 2 diabetes and obesity due to their alleged hunter gatherer genes Hay's study begins with Charles Darwin's travels and his observations on the Indigenous peoples he encountered setting the imperial

context for Canadian histories of medicine and colonialism It continues in the mid twentieth century with a look at nutritional experimentation during the long career of Percy Moore the medical director of Indian Affairs 1946 1965 Hay then turns to James Neel s invention of the thrifty gene hypothesis in 1962 and Robert Hegele s reinvention and application of the hypothesis to Sandy Lake First Nation in northern Ontario in the 1990s Finally Hay demonstrates the way in which settler colonial science was responded to and resisted by Indigenous leadership in Sandy Lake First Nation who used monies from the thrifty gene study to fund wellness programs in their community Inventing the Thrifty Gene exposes the exploitative nature of settler science with Indigenous subjects the flawed scientific theories stemming from faulty assumptions of Indigenous decline and disappearance as well as the severe inequities in Canadian health care that persist even today

Authorial Ethics is a normative study that deals with the many ways in which writers abuse their commitment to truth and integrity It is divided by academic discipline and includes chapters on journalism history literature art psychology and science among others Robert Hauptman offers generalizations and theoretical remarks exemplified by specific cases Two major abrogations are inadvertent error and purposeful misconduct which is subdivided into falsification fabrication and plagiarism All of these problems appear in most disciplines although their negative impact is felt most potently in biomedical research and publication Professor Mary Lefkowitz the classicist provides an incisive foreword *The Nature of Difference* George Ellison,Alan H. between the biological and social sciences. Biological Anthropology and Ethics Trudy R. Turner, 2012-02-01 Biological anthropologists face an array of ethical issues as they engage in fieldwork around the world. In this volume, human biologists, geneticists, paleontologists, and primatologists confront their involvement with and obligations to their research subjects, their discipline, society, and the environment. Those working with human populations explore such issues as who speaks for a group, community consultation and group consent, the relationship between expatriate communities and the community of origin, and disclosing the identity of both individuals and communities. Those working with skeletal remains discuss issues that include access to and ownership of fossil material. Primatologists are concerned about the well-being of their subjects in laboratory and captive situations and must address yet another set of issues regarding endangered animal populations and conservation in field situations. The first comprehensive account of the ethical issues facing biological anthropologists today, Biological Anthropology and Ethics opens the door for discussions of ethical issues in professional life.

Assessing Social Science Research Ethics and Integrity Harry Perlstadt, 2024-01-19 This book discusses the development of key issues in research ethics relevant for clinical sociologists concerning client rights to confidentiality, privacy, and informed consent. It describes the US human research protection system used by clinical and applied sociologists through a history of research ethics, including the landmark Belmont Report and the creation of the regulatory structure of Institutional Review Boards (IRBs) in the United States. It also discusses ethical research systems in other nations like Canada, the UK, Australia, and New Zealand. The book provides a comprehensive account of controversial studies in the US, including Milgram's Obedience to Authority, Zimbardo's Stanford Prison Experiment, and the US Public Health Service and the Tuskegee Syphilis Study, and analyzes how ethical concerns in these studies were or were not resolved. This book covers a topic of core interest to clinical and applied sociologists and other social science practitioners who do research, as well as students and teachers in research ethics courses in anthropology, psychology, political science, sociology, and philosophy, thereby broadening an awareness of clinical sociology.

Parasites, Pathogens, and Progress Robert A. McGuire, Philip R. P. Coelho, 2011-09-30 The crucial role played by diseases in economic progress, the growth of civilizations, and American history. In Parasites, Pathogens, and Progress, Robert McGuire and Philip Coelho integrate biological and economic perspectives into an explanation of the historical development of humanity and the economy, paying particular attention to the American experience, its history, and development. In their path-breaking examination of the impact of population growth and parasitic diseases, they contend that interpretations of history that minimize or ignore the physical environment are incomplete or wrong. The authors emphasize the paradoxical impact of population growth and density on progress: An increased population leads to increased market size, specialization, productivity, and living standards. Simultaneously, increased population density can provide an ecological niche for pathogens and parasites that prey upon humanity, increasing morbidity and mortality. The tension between diseases and progress continues with progress dominant since the late 1800s. Integral to their story are the differential effects of diseases

on different ethnic racial groups McGuire and Coelho show that the Europeanization of the Americas for example was caused by Old World diseases unwittingly brought to the New World not by superior technology and weaponry The decimation of Native Americans by pathogens vastly exceeded that caused by war and human predation The authors combine biological and economic analyses to explain the concentration of African slaves in the American South African labor was more profitable in the South because Africans evolutionary heritage enabled them to resist the diseases that became established there conversely Africans ancestral heritage made them susceptible to northern cold weather diseases European disease resistance and susceptibilities were the opposite regionally Differential regional disease ecologies thus led to a heritage of racial slavery and racism

Life on Ice Joanna Radin, 2017-03-27 After the atomic bombing at the end of World War II anxieties about survival in the nuclear age led scientists to begin stockpiling and freezing hundreds of thousands of blood samples from indigenous communities around the world These samples were believed to embody potentially invaluable biological information about genetic ancestry evolution microbes and much more Today they persist in freezers as part of a global tissue based infrastructure In *Life on Ice* Joanna Radin examines how and why these frozen blood samples shaped the practice known as biobanking The Cold War projects Radin tracks were meant to form an enduring total archive of indigenous blood before it was altered by the polluting forces of modernity Freezing allowed that blood to act as a time traveling resource Radin explores the unique cultural and technical circumstances that created and gave momentum to the phenomenon of life on ice and shows how these preserved blood samples served as the building blocks for biomedicine at the dawn of the genomic age In an era of vigorous ethical legal and cultural debates about genetic privacy and identity *Life on Ice* reveals the larger picture how we got here and the promises and problems involved with finding new uses for cold human blood samples

Ecologies and Politics of Health Brian King, Kelley A. Crews, 2013-05-07 Human health exists at the interface of environment and society Decades of work by researchers practitioners and policy makers has shown that health is shaped by a myriad of factors including the biophysical environment climate political economy gender social networks culture and infrastructure Yet while there is emerging interest within the natural and social sciences on the social and ecological dimensions of human disease and health there have been few studies that address them in an integrated manner *Ecologies and Politics of Health* brings together contributions from the natural

and social sciences to examine three key themes the ecological dimensions of health and vulnerability the socio political dimensions of human health and the intersections between the ecological and social dimensions of health The thirteen case study chapters collectively present results from Africa Asia Latin America the United States Australia and global cities Section one interrogates the utility of several theoretical frameworks and conventions for understanding health within complex social and ecological systems Section two concentrates upon empirically grounded and quantitative work that collectively redefines health in a more expansive way that extends beyond the absence of disease Section three examines the role of the state and management interventions through historically rich approaches centering on both disease and non disease related examples from Latin America Eastern Africa and the United States Finally Section four highlights how health vulnerabilities are differentially constructed with concomitant impacts for disease management and policy interventions This timely volume advances knowledge on health environment interactions disease vulnerabilities global development and political ecology It offers theoretical and methodological contributions which will be a valuable resource for researchers and practitioners in geography public health biology anthropology sociology and ecology Moments of Truth in Genetic
