Parallel and Distributed Processing, 1999 *Optical Bistability III* Hyatt M. Gibbs, Paul Mandel, Nasser Peyghambarian, S. Desmond Smith, 2012-12-06 This is a collection of papers presented at the Topical Meeting on Optical Bistability OB3 held December 24 1985 in Tucson Arizona The increase in attendance to almost 200 shows that interest continues to grow in the subject of optical bistability OB and its wider implications both in application to optical digital computing and to basic physics notably instabilities and spatial effects The maturing of the field is evidenced by the fact that the number of experimental papers has caught up with the number of theoretical ones These trends were already apparent in OB2 and the 1984 Royal Society Meeting on Optical Bistability Dynamical Nonlinearity and Photonic Logic Progress in experimental topics included guided wave OB mostly thermal picosecond switching studies on quite a number of new materials optical computing and pattern recognition using arrays of nonlinear etalons Theoretical progress ranged from rather practical calculations on device performance noise effects on switching and transverse and longitudinal spatial effects to fundamental studies of dynamics instabilities and chaos The Conference also included both theoretical ideas on optical computer architecture and intrinsic OB circuit elements such as full adder as well as the first demonstration of an intrinsic optical circuit in the form of a cascaded loop with buffer stores A first demonstration of a simple pattern recognition algorithm using 2-D arrays of spots on a ZnSe interference filter was reported
