*Magic and Memory in Giordano Bruno* Manuel Mertens, 2018-06-12 In *Magic and Memory in Giordano Bruno* Manuel Mertens unravels the enigmatic knot between the mnemonic treatises and the magical writings of the sixteenth century Italian philosopher Giordano Bruno Since long the magical orientation of the Brunian art of memory has been a preoccupation for Bruno scholars like Paolo Rossi Frances Yates and Rita Sturlese This serious study of the philosophical underpinnings of both Bruno's mnemonic treatises and his writings on magic shows that Bruno believed his mnemonic

method could prevent demons from corrupting the cognitive process Mertens's focus on Bruno's idea of deification through memory and the philosopher's view on fiery heroic spirits points to a surprisingly literal reading of the heretic's last words

*Oil and Modern World Dramas* Alireza Fakhrkonandeh, 2023-03-31 The first to focus on the representations of oil in dramatic literature theatre and performance *Oil and Modern World Dramas* is a pioneering volume in the emerging field of Oil Literatures and Cultures and the more established field of World Literatures Through close analysis Fakhrkonandeh demonstrates how these dramatic works depict oil both in its perceived nature and character as an overdetermined matter sign object a symbol of freedom autonomy speed wealth modernity enlightenment a commodity a social cultural agent a social relation and a hyper object This book is also distinguished by its innovative and critically manifold conceptual framework positing the petro literatures and petro cultures an inextricable part of a global network *Oil and Modern World Dramas* not only demonstrates how the chosen works of petro drama manifest these concepts in their social political vision aesthetics and historical ontological dynamics but also reveals how they deploy such assemblage based approaches both as a cartographical means and aesthetic method for exposing the systemic Capitalocenic nature of petro capitalist exploitation and as means of proposing ways of resistance and producing alternative modes of subjectivity community relationality and economy

*Computer Aided Verification* Ruzica Piskac, Zvonimir Rakamarić, 2025-07-22 This open access 4 volume set constitutes the proceedings of the 37th International Conference on Computer Aided Verification CAV 2025 held in Zagreb Croatia in July 23-25 2025 The 51 regular papers presented together 24 tool papers 4 case study papers in these proceedings were carefully reviewed and selected from 305 submissions The accepted papers cover a wide spectrum of topics from theoretical results to applications of formal methods These papers apply or extend formal methods to a wide range of domains such as concurrency machine learning and neural networks quantum systems as well as hybrid and stochastic systems

*Exploring Quantum Contextuality with Photons* Zheng-Hao Liu, 2023-11-20 This thesis highlights research explorations in quantum contextuality with photons Quantum contextuality is one of the most intriguing and peculiar predictions of quantum mechanics It is also a cornerstone in modern quantum information science It is the origin of the famous quantum nonlocality and various nonclassical paradoxes It is also a resource for many quantum information processing tasks and even universal quantum computing Therefore the study of quantum contextuality not only advances the comprehension of the foundations of quantum physics but also facilitates the practical applications of quantum information technology In the last fifteen years the study of quantum contextuality has developed from a purely theoretical level to a stage where direct experimental tests become amenable However the experimental research on contextuality at the current stage largely focuses on direct validations of some most famous predictions of contextuality while other forms of contextuality and its practical applications in quantum information science are rarely involved The research in this thesis is committed to bridge this gap from two directions 1 to construct and test stronger forms of contextuality and relieve the

requirements of contextuality experiments on experimental platforms and 2 to explore the connections between contextuality and the other concepts in quantum information science and directly demonstrate the application of contextuality in broader scenarios Specifically the thesis have discussed the research topics about the relationship between quantum contextuality and nonlocality the all versus nothing paradoxes from quantum contextuality the ore and post selection paradoxes from quantum contextuality and the topological protection and braiding dynamics of quantum contextuality in quasiparticle systems

*Digital Quantum Information Processing with Continuous-Variable Systems* Takaya Matsuura,2023-02-06 The book provides theoretical methods of connecting discrete variable quantum information processing to continuous variable one It covers the two major fields of quantum information processing quantum communication and quantum computation leading to achievement of a long sought full security of continuous variable quantum key distribution QKD and proposal of a resource efficient method for optical quantum computing Firstly the book provides a security of continuous variable QKD against arbitrary attacks under a realistic condition such as finite communication rounds and the use of digitized information processing The book also provides the unified view for conventionally used approximate Gottesman Kitaev Preskill GKP codes which encodes qudits on a continuous variable system enabling direct comparison between researches based on different approximations The book finally proposes a resource efficient method to realize the universal optical quantum computation using the GKP code via the direct preparation of the GKP magic state instead of GKP Pauli states Feasibility of the proposed protocol is discussed based on the existing experimental proposals for the GKP state preparation

Quantum Computation with Topological Codes Keisuke Fujii,2015-12-15 This book presents a self consistent review of quantum computation with topological quantum codes The book covers everything required to understand topological fault tolerant quantum computation ranging from the definition of the surface code to topological quantum error correction and topological fault tolerant operations The underlying basic concepts and powerful tools such as universal quantum computation quantum algorithms stabilizer formalism and measurement based quantum computation are also introduced in a self consistent way The interdisciplinary fields between quantum information and other fields of physics such as condensed matter physics and statistical physics are also explored in terms of the topological quantum codes This book thus provides the first comprehensive description of the whole picture of topological quantum codes and quantum computation with them
