Olson, Gustav Kuhn, 2016-11-18 Magicians have dazzled audiences for many centuries however few researchers have studied how let alone why most tricks work The psychology of magic is a nascent field of research that examines the underlying mechanisms that conjurers use to achieve enchanting phenomena including sensory illusions misdirection of attention and the appearance of mind control and nuanced persuasion Most studies to date have focused on either the psychological principles involved in watching and performing magic or neuromagic the neural correlates of such phenomena Whereas performers sometimes question the contributions that modern science may offer to the advancement of the magical arts the history of magic reveals that scientific discovery often charts new territories for magicians In this research topic we sketch out the symbiotic relationship between psychological science and the art of magic On the one hand magic can inform psychology with particular benefits for the cognitive social developmental and transcultural components of behavioural science Magicians have a large and robust set of effects that most researchers rarely exploit Incorporating these effects into existing experimental even clinical paradigms paves the road to innovative trajectories in the study of human behaviour For example magic provides an elegant way to study the behaviour of participants who may believe they had made choices that they actually did not make Moreover magic fosters a more ecological approach to experimentation whereby scientists can probe participants in more natural environments compared to the traditional lab based settings Examining how magicians consistently influence spectators for example can elucidate important aspects in the study of persuasion trust decision making and even processes spanning authorship and agency Magic thus offers a largely underused armamentarium for the behavioural scientist and clinician On the other hand psychological science can advance the art of magic The psychology of deception a relatively understudied field explores the

intentional creation of false beliefs and how people often go wrong Understanding how to methodically exploit the tenuous twilight zone of human vulnerabilities perceptual logical emotional and temporal becomes all the more revealing when top down influences including expectation symbolic thinking and framing join the fray Over the years science has permitted magicians to concoct increasingly effective routines and to elicit heightened feelings of wonder from audiences Furthermore on occasion science leads to the creation of novel effects or the refinement of existing ones based on systematic methods For example by simulating a specific card routine using a series of computer stimuli researchers have decomposed the effect and reconstructed it into a more effective routine Other magic effects depend on meaningful psychological knowledge such as which type of information is difficult to retain or what changes capture attention Behavioural scientists measure and study these factors By combining analytical findings with performer intuitions psychological science begets effective magic Whereas science strives on parsimony and independent replication of results magic thrives on reproducing the same effect with multiple methods to obscure parsimony and minimise detection This Research Topic explores the seemingly orthogonal approaches of scientists and magicians by highlighting the crosstalk as well as rapprochement between psychological science and the art of deception

**The Illusionist Brain** Jordi Camí, Luis M. Martínez, 2022-06-07 How magicians exploit the natural functioning of our brains to astonish and amaze us How do magicians make us see the impossible The Illusionist Brain takes you on an unforgettable journey through the inner workings of the human mind revealing how magicians achieve their spectacular and seemingly impossible effects by interfering with your cognitive processes Along the way this lively and informative book provides a guided tour of modern neuroscience using magic as a lens for understanding the unconscious and automatic functioning of our brains We construct reality from the information stored in our memories and received through our senses and our brains are remarkably adept at tricking us into believing that our experience is continuous In fact our minds create our perception of reality by elaborating meanings and continuities from incomplete information and while this strategy carries clear benefits for survival it comes with blind spots that magicians know how to exploit Jordi Cam and Luis Mart nez explore the many different ways illusionists manipulate our attention making us look but not see and take advantage of our individual predispositions and fragile memories The Illusionist Brain draws on the latest findings in neuroscience to explain how magic deceives us surprises us and amazes us and demonstrates how illusionists skillfully hack our brains to alter how we perceive things and influence what we imagine

**Experiencing the Impossible** Gustav Kuhn, 2019-03-12 This thought provoking tour through the science of magic will make you question what you know about your brain and your reality A psychologist and magician shows how the scientific study of magic reveals intriguing and often unsettling insights into the mysteries of the human mind What

do we see when we watch a magician pull a rabbit out of a hat or read a person's mind. We are captivated by an illusion we applaud the fact that we have been fooled. Why do we enjoy experiencing what seems clearly impossible or at least beyond our powers of explanation. In *Experiencing the Impossible* Gustav Kuhn examines the psychological processes that underpin our experience of magic. Kuhn, a psychologist and a magician, reveals the intriguing and often unsettling insights into the human mind that the scientific study of magic provides. Magic Kuhn explains creates a cognitive conflict between what we believe to be true for example a rabbit could not be in that hat and what we experience a rabbit has just come out of that hat. Drawing on the latest psychological, neurological and philosophical research he suggests that misdirection is at the heart of all magic tricks and he offers a scientific theory of misdirection. He explores among other topics our propensity for magical thinking, the malleability of our perceptual experiences, forgetting and misremembering, free will and mind control and how magic is applied outside entertainment, the use of illusion in human computer interaction, politics, warfare and elsewhere. We may be surprised to learn how little of the world we actually perceive, how little we can trust what we see and remember and how little we are in charge of our thoughts and actions. Exploring magic Kuhn illuminates the complex and almost magical mechanisms underlying our daily activities. **Grimoire For The Apprentice Wizard** Oberon Zell-Ravenheart, 2004-02-04

**Popular Performance** Adam Ainsworth, Oliver Double, Louise Peacock, 2017-04-20 There is no fourth wall in popular performance The show is firmly rooted in the here and now and the performers address the audience directly while the audience answer back with laughter applause or heckling Performer and role are interlaced so that we are left uncertain about just how the persona we see onstage might relate to the private person who presents it to us Popular Performance defines and surveys varieties of performance where the main purpose is to entertain and where there is no shame in being trivial frivolous or nonsensical as long as people go home happy at the end of the show Contributions by new and established scholars focus particularly on how it is made explaining the techniques of performance and production that make it so appealing to audiences With sections examining how popular performance works in a range of historical and contemporary examples readers will gain insights into performance forms associated with the variety tradition music hall vaudeville cabaret variety performance forms associated with circus wild west shows clowning issues relating to the identity of the performer in relation to magic burlesque pantomime in contemporary performance issues relating to venue and

Marcusson-Clavertz, 2015-07-25 Many people have experienced such unusual phenomena as dreams that later seem to  
correspond with unforeseeable events thinking of a long lost friend just before he or she unexpectedly calls or the ability to  
feel the presence of deceased loved ones What many do not realize is that these types of experiences have been researched  
for more than a century by eminent scientists including Nobel laureates Most of these researchers have concluded that some  
of these phenomena do occur although we are far from explaining them to everyone's satisfaction This book is the first in  
almost 40 years to provide a comprehensive scientific overview of research in the field of parapsychology explaining what we  
know and don't know about so called psi phenomena such as telepathy precognition or psychokinesis Contributors evaluate  
the evidence for these phenomena accounting for factors such as selective memory wish fulfillment and incorrect methods or  
analyses in some cases offering psychological physical and biological theories Instructors considering this book for use in a
