Morán-López, 2007-05-08 Oaxaca Mexico was the place chosen by a large international group of scientists to meet and discuss on the recent advances on the understanding of the physical prop ties of low dimensional systems one of the most active fields of research in condensed matter in the last years The International Symposium on the Physics of Low Dim sions took place in January 16 20 2000 The group of scientists converging into the historical city of Oaxaca in the state of the same name had come from Argentina Chile Venezuela several places in Mexico Canada U S A England France Italy Germany Russia and Switzerland The presentations at the workshop provided sta of art reviews of many of the most important problems currently under study Equally important to all the participants in the workshop was the fact that we had come to honor a friend Hans Christoph Siegmann on his sixty fifth birthday This Festschrift recognizes the intellectual leadership of Professor Siegmann in the field and as a sincere homage to his qualities as an exceptional friend college and mentor Those who have had the privilege to work closely with Hans Christoph have been deeply impressed by his remarkable analytic mind as well as by his out of range kindness and generosity Hans Christoph has contributed to the understanding of the difficult and very important problem of the magnetic properties

Theory, Preparation, and Some Applications Luis M. Liz-Marzán, Michael Giersig, 2003-03-31 Proceedings of the NATO Advanced Research Workshop held in Puszczkowo Poland 16-19 May 2002 Lower-Dimensional Systems and Molecular Electronics Robert M. Metzger, Peter R. Day, George C. Papavassiliou, 2013-11-11 This volume represents the written account of the NATO Advanced Study Institute Lower Dimensional Systems and Molecular Electronics held at Hotel Spetses Spetses Island Greece from 12 June to 23 June 1989. The goal of the Institute was to demonstrate the breadth of chemical and physical knowledge that has been acquired in the last 20 years in inorganic and organic crystals, polymers and thin films which exhibit phenomena of reduced dimensionality. The interest in these systems started in the late 1960s with lower dimensional inorganic conductors in the early 1970s with quasi one dimensional crystalline organic conductors which by 1979 led to the first organic superconductors and in 1977 to the first conducting polymers. The study of monolayer films Langmuir-Blodgett films had progressed since the 1930s but reached a great upsurge in the early 1980s. The pursuit of non linear optical phenomena became increasingly popular in the early 1980s as the attention turned from inorganic crystals to organic films and polymers. And in the last few years the term molecular electronics has gained ever increasing acceptance although it is used in several contexts. We now have organic superconductors with critical temperatures in excess of 10 K, conducting polymers that are soluble and processable and used commercially we have films of a few monolayers that have high in plane electrical conductivity and polymers that show great promise in photonics we even have a few devices that function almost at the molecular level.
