Lee, Francesco M. Marincola, 2020-03-25 This book addresses the biological processes relevant to the immune phenotypes of cancer and their significance for immune responsiveness based on the premise that malignant cells manipulate their surroundings through an evolutionary process that is controlled by interactions with innate immune sensors as well as the adaptive recognition of self non self Checkpoint inhibitor therapy is now an accepted new form of cancer treatment Other immuno oncology approaches such as adoptive cell therapy and metabolic inhibitors have also shown promising results for specific indications Immune resistance is common however limiting the efficacy of immunotherapy in many common cancer types The reasons for such resistance are diverse and peculiar to the immune landscapes of individual cancers and to the treatment modality used Accordingly approaches to circumvent resistance need to take into account context specific genetic biological and environmental factors that may affect the cancer immune cycle and which can best be understood by studying the target tissue and correlated systemic immune markers Understanding the major requirements for the evolutionary process governing human cancer growth in the immune competent host will guide effective therapeutic choices that are tailored to the biology of individual cancers Handbook of Magnetic Resonance Spectroscopy In Vivo Paul A. Bottomley, John R. Griffiths, 2016-12-19 This handbook covers the entire field of magnetic resonance spectroscopy MRS a unique method that allows the non invasive identification quantification and spatial mapping of metabolites in living organisms including animal models and patients Comprised of three parts Methodology covers basic MRS theory methodology for acquiring quantifying spectra and spatially localizing spectra and equipment essentials as well as vital ancillary issues such as motion suppression and physiological monitoring Applications focuses on MRS applications both in animal models of disease and in human studies of normal physiology and disease including cancer neurological disease cardiac and muscle metabolism and obesity Reference includes useful appendices and look up tables of relative MRS signal to noise ratios typical tissue concentrations
