Magnetism Principles And Applications:

Environmental Magnetism Michael Edwin Evans, Friedrich Heller, 2003-04-14 Magnetism is important in environmental studies for several reasons the two most fundamental being that most substances exhibit some form of magnetic behavior and that iron is one of the most common elements in the Earth's crust Once sequestered in a suitable material magnetic particles constitute a natural archive of conditions existing in former times Magnetism provides a tracer of paleo climatic and paleo environmental conditions and processes *Environmental Magnetism* details the occurrence and uses of magnetic materials in the natural environment The first half of the volume describes the basic principles The second half discusses the applications of magnetic measurements in various environmental settings on land in lakes in the ocean and even various biological organisms Material is broadly applicable to environmental studies Case histories illustrate key points Extensive bibliography makes further research quick and easy

Digital Methods and Remote Sensing in Archaeology Maurizio Forte, Stefano Campana, 2017-02-10 This volume debuts the new scope of Remote Sensing which was first defined as the analysis of data collected by sensors that were not in physical contact with the objects under investigation using cameras scanners and radar systems operating from spaceborne or airborne platforms A wider characterization is now possible Remote Sensing can be any non destructive approach to viewing the buried and nominally invisible evidence of past activity Spaceborne and airborne sensors now supplemented by laser scanning are united using ground based geophysical instruments and undersea remote sensing as well as other non invasive techniques such as surface collection or field walking survey Now any method that enables observation of evidence on or beneath the surface of the earth without impact on the surviving stratigraphy is legitimately within the realm of Remote Sensing The new interfaces and senses engaged in Remote Sensing appear throughout the book On a philosophical level this is about the landscapes and built environments that reveal history through place and time It is about new perspectives the views of history possible with Remote Sensing and fostered in part by immersive interactive 3D and 4D environments discussed in this volume These perspectives are both the result and the implementation of technological cultural and epistemological advances in record keeping interpretation and conceptualization Methodology presented here builds on the current ease and speed in collecting data sets on the scale of the object site locality and landscape As this volume shows many disciplines surrounding archaeology and related cultural studies are currently involved in Remote Sensing and its relevance will only

increase as the methodology expands

Thermal Stability of Metastable Magnetic Skyrmions Louise Desplat,2021-02-04 The energy cost associated with modern information technologies has been increasing exponentially over time stimulating the search for alternative information storage and processing devices Magnetic skyrmions are solitonic nanometer scale quasiparticles whose unique topological properties can be thought of as that of a Mobius strip Skyrmions are envisioned as information carriers in novel information processing and storage devices with low power consumption and high information density As such they could contribute to solving the energy challenge In order to be used in applications isolated skyrmions must be thermally stable at the scale of years In this work their stability is studied through two main approaches the Kramers method in the form of Langer s theory and the forward flux sampling method Good agreement is found between the two methods We find that small skyrmions possess low internal energy barriers but are stabilized by a large activation entropy This is a direct consequence of the existence of stable modes of deformation of the skyrmion Additionally frustrated exchange that arises at some transition metal interfaces leads to new collapse paths in the form of the partial nucleation of the corresponding antiparticle as merons and antimerons

Frontiers in Earth Science - Editor's Choice 2017 Valerio Acocella,2018-03-29 2017 has been an exciting year for our innovative open access journal Frontiers in Earth Science many new articles have been published and are now indexed in Web of Science ESCI new sections have opened for submissions including Solid Earth Geophysics and our Editorial Board has been successfully leading the peer review process and providing comprehensive reviews to our authors Have a look at our archive to read about the feeding habits of dinosaurs human influence on in the African humid period volcanic hazard models or how glaciers flowing into the ocean surrounding Greenland have changed over time Launched at the end of 2013 our Journal consists of several specialties whose number has increased with time and currently stands at 19 also including a few specialties co listed in other fields <https://www.frontiersin.org/journals/earth-science> The present selection is not exhaustive as new ones are being launched and or are under consideration for development This growth has been paralleled by a yearly increase in the number of contributions and the Editorial Board members reflecting the health of the Journal Now also indexed in Web of Science Emerging Sources Citation Index ESCI Frontiers in Earth Science is ambitious to become the leading open access journal in its field The idea of creating an Editor s Choice eBook has been in our minds for a while as we wanted to create an environment for the Chief Editors to highlight their choice of representative papers in the Journal we are happy to present now our first edition The eBook offers a quick though representative window into the different specialties

giving additional visibility to some of the most interesting studies published in 2016 and 2017 It provides a glimpse into the state of the art of Earth Science on the cusp of 2020 Earth Science studies the different spheres of the Earth geosphere atmosphere hydrosphere and partly biosphere and as such it provides a holistic perspective of our planet This discipline in addition to understanding our environment enables us to face major natural challenges such as improving the management of natural resources promoting environmental sustainability and forecasting and managing natural hazards Acocella 2015 and references therein On this basis the contributions grouped in this eBook even though appearing distinct in subject methods goal and impact should be considered as different aspects of the same system Indeed the selection of these contributions aims to capture a multidisciplinary and common understanding of our planet with its interconnected processes and challenges It is important to note that in many cases it has not been easy to select a representative study per specialty and thus the papers included in this eBook should therefore not be considered as the representative ones but rather as a concise selection of key papers We hope you enjoy reading our first edition of the Editor s Choice eBook Jessica Journal Manager and Valerio Field Chief Editor
