Magnetism In Metals Metallic Compounds:

Magnetism in Metals and Metallic Compounds Jan Lapuszanski, 2012-12-06 The Proceedings presented here contain the notes of lectures delivered during the Eleventh Winter School of Theoretical Physics held at Karpacz Poland February 19 March 4 1974 The School was primarily devoted to new concepts in the theory of magnetism in metals alloys and metallic compounds but as can be seen from the table of contents of the book other topics of the theory of magnetism were also discussed in the course of the lectures The organizers agreed to such a broadening of the scope in order to satisfy particular requests from the Polish participants for whose benefit the School was organized These local interests are clearly reflected in the Proceedings and are responsible for a certain inhomogeneity of the topics selected for presentation Nevertheless we have a strong hope that these materials will be interesting to many physicists not only in Poland for the subjects discussed here are important not only on the local level as the lectures contain quite fresh unpublished results or excellent up to date reviews The first part of the volume contains lectures directly corresponding to the title of the School i.e. selected topics of the theory of metallic magnetism with slight bias toward rare earth and actinide metals and their compounds In the second half we have collected the topics more loosely connected with the main stream such as statistical and thermodynamic aspects of various models spin phonon interaction and others

Physics of Magnetism and Magnetic Materials K.H.J Buschow, F.R. de Boer, 2007-05-08 In this book the fundamentals of magnetism are treated starting at an introductory level The origin of magnetic moments the response to an applied magnetic field and the various interactions giving rise to different types of magnetic ordering in solids are presented and many examples are given Crystalline electric field effects are treated at a level that is sufficient to provide the basic knowledge necessary in understanding the properties of materials in which these effects play a role Itinerant electron magnetism is presented on a similar basis Particular attention has been given to magnetocrystalline magnetic anisotropy and the magnetocaloric effect Also the usual techniques for magnetic measurements are presented About half of the book is devoted to magnetic materials and the properties that make them suitable for numerous applications The state of the art is presented of permanent magnets high density recording materials soft magnetic materials Invar alloys and magnetostrictive materials Many references are given

Recent Advances In Magnetism Of Transition Metal Compounds: Festschrift In Honour Of Professor K Motizuki Akio Kotani, Naoshi Suzuki, 1993-03-18 This book is a Festschrift in honour of Professor Kazuko Motizuki on the occasion of her retirement from Osaka University She has been active in a variety of branches of solid state physics and in particular has made an important contribution to the theory of magnetism The book reviews recent advances in magnetism of transition metal compounds both for itinerant electron systems and localized spin systems For the former systems band calculational methods correlation effects and theoretical aspects of photoemission spectroscopy are reviewed generally and then recent progress in the theoretical and experimental understanding of magnetic properties of various kinds of intermetallic compounds and

intercalation compounds of transition metal dichalcogenides are reviewed in detail For the latter systems attention is focused on quantum effects frustration and competing interaction in low dimensional systems Main subjects treated in the book are Haldane gap systems singlet ground state systems triangular spin systems and quantum spin chains with competing interactions

Handbook of Magnetic Materials K.H.J. Buschow, 2001 Volume 13 of the Handbook of Magnetic Materials as the preceding volumes has a dual purpose As a textbook it is intended to be of assistance to those who wish to be introduced to a given topic in the field of magnetism without the need to read the vast amount of literature published As a work of reference it is intended for scientists active in magnetism research To this dual purpose Volume 13 of the Handbook is composed of topical review articles written by leading authorities In each of these articles an extensive description is given in graphical as well as in tabular form much emphasis being placed on the discussion of the experimental material in the framework of physics chemistry and material science In Chapter 1 of this volume a general review of the experimental work on interlayer exchange coupling is presented along with a discussion of the current understanding of this field There exists an extensive amount of scientific efforts devoted to 4f and 5f systems including experimental and theoretical as well as basic and applied research Chapter 2 aims at reviewing a part of these efforts from the viewpoint of microscopic theory Special attention is paid to the many new developments in the field One of the intentions is to bring to the fore the darker areas of DFT theory applications A review of novel experimental results and first principle energy band calculations of MOKE spectra will be presented in Chapter 3 Conventional co operative phenomena such as long range order and elementary excitation have realisations in nonmagnetic situations This applies also to the phenomena of geometrical frustration In Chapter 4 this topic is addressed by developing the basic principles underlying the magnetic phenomena

Compounds with Polar Metallic Bonding Constantin Hoch, 2019-07-01 The Special Edition Compounds with Polar Metallic Bonding is a collection of eight original research reports presenting a broad variety of chemical systems analytical methods preparative pathways and theoretical descriptions of bonding situations with the common aim of understanding the complex interplay of conduction electrons in intermetallic compounds that possess different types of dipoles Coulombic dipoles introduced by electronegativity differences electric or magnetic dipoles polarity induced by symmetry reduction all the possible facets of the term polarity can be observed in polar intermetallic phases and have their own and in most cases unique consequences on the physical and chemical behaviour Elucidation of the structure property relationships in compounds with polar metallic bonding is a modern and growing scientific field which combines solid state physics preparative chemistry metallurgy modern analytic methods crystallography theoretical calculations of the electronic state and many more disciplines
