interpretation Themes and techniques are repeated across chapters with a progression in mathematical sophistication over the course of the book which helps the student get comfortable with the process of thinking in numbers This textbook includes references to source materials and suggested further reading making it user friendly for motivated undergraduate students The many detailed problems and worked solutions in the text and extensive appendices help the reader learn mathematical areas such as algebra functions graphs and probability End of chapter problem material provides practice for students and suggested projects are provided with each chapter A solutions manual is available online for instructors

The Nature of Mathematical Thinking Robert J. Sternberg, Talia Ben-Zeev, 2012-10-12 Why do some children seem to learn mathematics easily and others slave away at it learning it only with great effort and apparent pain Why are some people good at algebra but terrible at geometry How can people who successfully run a business as adults have been failures at math in school How come some professional mathematicians suffer terribly when trying to balance a checkbook And why do school children in the United States perform so dismally in international comparisons These are the kinds of real questions the editors set out to answer or at least address in editing this book on mathematical thinking Their goal was to seek a diversity of contributors representing multiple viewpoints whose expertise might converge on the answers to these and other pressing and interesting questions regarding this subject The chapter authors were asked to focus on their own approach to mathematical thinking but also to address a common core of issues such as the nature of mathematical thinking how it is similar to and different from other kinds of thinking what makes some people or some groups better than others in this subject area and how mathematical thinking can be assessed and taught Their work is directed to a diverse audience psychologists interested in the nature of mathematical thinking and abilities computer scientists who want to simulate mathematical thinking educators involved in teaching and testing mathematical thinking philosophers who need to understand the qualitative aspects of logical thinking anthropologists and others interested in how and why mathematical thinking seems to differ in quality across cultures and laypeople and others who have to think mathematically and want to understand how they are going to accomplish that feat *Mathematical Thinking in a Quantitative World* Nicholls, Linda R. Sons, 1990-07-01 These text materials are intended for a college course in quantitative reasoning The thrust of these materials is towards helping the student develop the use of mathematical thinking in his her life as an educated person The course for which these materials are intended seeks to develop in the student a competency in problem solving and analysis which is helpful in personal decision making in evaluating concerns in the community state and nation in setting and achieving career goals and in continued learning The text presupposes two years of college preparatory high school mathematics One year of college preparatory high school algebra is assumed along with a second year of mathematics which consists of college preparatory geometry or a second year of college preparatory algebra Elementary geometry is also assumed Pref to rev ed **ECGBL 2021 15th European Conference on Game-Based Learning** Panagiotis Fotaris, Cate

Grundy, Marcus Winter, 2021-09-23 **Discovering Mathematics** Richard N Aufmann, 2023-05-05 **Effective Grading** Barbara E. Walvoord, Virginia Johnson Anderson, 2011-01-13

The second edition of *Effective Grading* the book that has become a classic in the field provides a proven hands on guide for evaluating student work and offers an in depth examination of the link between teaching and grading. Authors Barbara E Walvoord and Virginia Johnson Anderson explain that grades are not isolated artifacts but part of a process that when integrated with course objectives provides rich information about student learning as well as being a tool for learning itself. The authors show how the grading process can be used for broader assessment objectives such as curriculum and institutional assessment. This thoroughly revised and updated edition includes a wealth of new material including Expanded integration of the use of technology and online teaching. A sample syllabus with goals outcomes and criteria for student work. New developments in assessment for grant funded projects. Additional information on grading group work portfolios and service learning experiences. New strategies for aligning tests and assignments with learning goals. Current thought on assessment in departments and general education using classroom work for program assessments and using assessment data systematically to close the loop. Material on using the best of classroom assessment to foster institutional assessment. New case examples from colleges and universities including community colleges. When the first edition of *Effective Grading* came out it quickly became the go to book on evaluating student learning. This second edition especially with its extension into evaluating the learning goals of departments and general education programs will make it even more valuable for everyone working to improve teaching and learning in higher education.

L Dee Fink author *Creating Significant Learning Experiences* Informed by encounters with hundreds of faculty in their workshops these two accomplished teachers assessors and faculty developers have created another essential text. Current faculty as well as graduate students who aspire to teach in college will carry this edition in a briefcase for quick reference to scores of examples of classroom teaching and assessment techniques and ways to use students classroom work in demonstrating departmental and institutional effectiveness.
