Galambos, John B. Black, Robert P. Abelson, 2013-08-21 First Published in 1986 This book marks a watershed in cognitive science activity at Yale University Over the past decade the cognitive science orientation has become more and more integrated into the mainstream of cognitive psychology and artificial intelligence workers now feel comfortable thinking about psychological experimentation This book collects in one place the research work which concentrates on covering topics in the representation processing and recall of meaningful verbal materials Several of the chapters are first reports of research others are specially prepared reviews and elaborations of research reported previously Here it is all together Studies of scripts plans and higher level knowledge structures analyses of knowledge structure activation of autobiographical memory of the phenomenon of reminding of the summarization of text of explanations for events and more Grounding in English and Arabic News Discourse Esam N. Khalil, 2000-01-01 Grounding in English and Arabic News Discourse explores the discourse notion of grounding viz the foreground background structure and examines it in the various structures that occur in short news texts A text level approach to grounding and the differentiation between several core concepts relating to the various textual and non textual structures distinguish the book from other approaches in the field A corpus based analysis focuses on sentence initial expressions and examines the grounding signalling function of several markers in both English and Arabic The analysis captures constraints on the occurrence of particular markers and the extensive illustrative examples explain the strategies that writers employ to cope with problems of recasting grounding values in news texts The author also shows how the failure to signal appropriate grounding values is likewise associated with the failure to deliver the appropriate type of text Grounding is a relatively unexplored area of investigation in Arabic text linguistics and the study identifies a series of previously unrecognized language features highlighting the discourse pragmatic function that syntax serves The book will be invaluable to researchers and students of discourse pragmatics contrastive rhetoric and communication It will also be of interest to all those involved in translation and intercultural studies SignGram Blueprint Josep Quer, Carlo Cecchetto, Caterina Donati, Carlo Geraci, Meltem Kelepir, Roland Pfau, Markus Steinbach, 2017-11-20 We gratefully acknowledge the financial support of COST European Cooperation in Science and Technology funded by the Horizon 2020 Framework Programme of the European Union Current grammatical knowledge about particular sign languages is fragmentary and of varying reliability and it appears scattered in scientific publications where the description is often intertwined with the analysis In general comprehensive grammars are a rarity The SignGram Blueprint is an innovative tool for the grammar writer a full fledged guide to describing all components of the grammars of sign languages in a thorough and systematic way and with the

highest scientific standards The work builds on the existing knowledge in Descriptive Linguistics but also on the insights from Theoretical Linguistics It consists of two main parts running in parallel the Checklist with all the grammatical features and phenomena the grammar writer can address and the accompanying Manual with the relevant background information definitions methodological caveats representative examples tests pointers to elicitation materials and bibliographical references The areas covered are Phonology Morphology Lexicon Syntax and Meaning The Manual is endowed with hyperlinks that connect information across the work and with a pop up glossary The SignGram Blueprint will be a landmark for the description of sign language grammars in terms of quality and quantity

**Teaching and Learning in History** Ola Hallden, 2012-10-12 Research on history instruction and learning is emerging as an exciting new field of inquiry The editors prepared this volume because the field is at an important moment in its development a stage where there is research of sufficient depth and breadth to warrant a collection of representative pieces The field of research on history teaching and learning connects with both traditional research on social studies and with recent cognitive analyses of domains such as mathematics and physics However the newer research goes beyond these activities as well Where traditional research approaches to social studies instruction and learning have focused on curriculum they have avoided the study of purely disciplinary features the textual components of history and the concomitant demands as well as the nature of various learners Where recent cognitive analyses of mathematics and physics have dealt with misconceptions and knowledge construction they have avoided topics such as perspective taking interpretation and rhetorical layerings The new work by contrast has been concerned with these issues as well as the careful analyses of the nature of historical tasks and the nature of disciplinary and instructional explanations The lines of research presented in these chapters are both compelling and diverse and include a range of topical questions such as What affects the quality of teaching How are historical documents interpreted in the writing of history How is history explained What are the classroom demands on an elementary school social studies teacher What does text accomplish or fail to accomplish in educational settings How do teachers think about particular topics for history teaching Although much of the research reflects a grounding in or the influence of cognitive psychology not all of it derives from that tradition Traditions of rhetoric curriculum analysis and developmental psychology are also woven throughout the chapters The editors envision this volume as a contribution to educational research in a subject matter and as a tool for practitioners concerned with the improvement of instruction in history They also anticipate that it will contribute to cognitive science

**Spontaneous Spoken Language** J. E. Miller, Regina Weinert, 1998 Jim Miller and Regina Weinert investigate syntactic structure and the organization of discourse in spontaneous spoken language Using data from English German and Russian they develop a systematic analysis of spoken English and highlight properties that hold across languages The authors argue that the differences in syntax and the construction of discourse between spontaneous speech and written language bear on various areas of linguistic theory apart from having obvious implications

for syntactic analysis In particular they bear on typology Chomskyan theories of first language acquisition and the perennial problem of language in education In current typological practice written and spontaneous spoken texts are often compared the authors show convincingly that typological research should compare like with like The consequences for Chomskyan and indeed all theories of first language acquisition flow from the central fact that children acquire spoken language but learn written language

**News As Discourse** Teun A. van Dijk, 2013-10-28 First Published in 1990 This book presents a new interdisciplinary theory of news in the press Against the background of developments in discourse analysis it is argued that news should be studied primarily as a form of public discourse Whereas in much mass communication research the economic social or cultural dimensions of news and news media are addressed the present study emphasizes the importance of an explicit structural analysis of news reports Such an analysis should provide a qualitative alternative to traditional methods of content analysis Also attention is paid to processes of news production by journalists and news comprehension by readers in terms of the social cognitions of news participants In this way news structures can also be explicitly linked to social practices and ideologies of news making and indirectly to the institutional and macro sociological contexts of the news media
