Mainstreams of Biology Gairdner Bostwick Moment, Helen Margaret Habermann, 1977 **Mainstreams of Biology** Gairdner B. Moment, Helen Haberman, 1977-02-01 *The American Biology Teacher*, 1938 Includes section Books

Pamphlets on Biology, 1889 *Biology pamphlets. supplement*, 1929 *Contributions to Biology from the Hopkins Laboratory of Biology*, 1897 *Biology Pamphlets*, 1901 **Contributions to Biology** Hopkins Marine Station, 1897

Reprints from various scientific periodicals **Life and Process** Spyridon A. Koutroufinis, 2014-05-21 Alfred North Whitehead is arguably the most original 20th century philosopher of nature and metaphysics In recent decades a number of physicists have produced ground breaking new theories in fundamental physics influenced by his process philosophy In contrast few biologists are even aware that Whitehead's radical rethinking of the Cartesian assumptions implicit in 19th century sciences might be relevant to their enterprise This book seeks to fill this gap by exploring how Whitehead's process ontology might provide a new philosophical foundation for the biosciences of the 21st century The central premise shared by all of the volume's authors is the idea that all living processes are irreducible processes Each chapter focuses on assumptions implicit in some of the core concepts of biology such as organism evolution information and teleology that play crucial explanatory roles in the biosciences but as metaphysical concepts fall outside its purview The authors each identify important shortcomings implicit in contemporary biological paradigms and show how an approach grounded in a process oriented metaphysics can avoid them **Biocivilisations** Predrag B. Slijepcevic, 2023-05-18 2024 Nautilus Book Award Gold Medal Winner Restorative Earth Practices A brilliant book that shows a way out of the destructive trap of Anthropocentric arrogance Vandana Shiva author of *Terra Viva* An unusually thought provoking and ambitious book Dr James A Shapiro author of *Evolution A View from the 21st Century* Biocivilisations is an important original rethinking of the mystery of life and its deep uncertainty exploring the complex civilisations that existed on Earth long before humans What is life Many scientists believe life can be reduced to mechanistic factors such as genes and information codes Yet there is a growing army of scientists philosophers and artists who reject this view The gene metaphor is not only too simplistic but deeply misleading If there is a way to reduce life to a single principle that principle must acknowledge the creativity of life turning genetic determinism on its head The term biocivilisations is the acknowledgement of this uncertainty of life as opposed to a quasi certainty of the human position governed by a narrow time window of the scientific revolution Life existed without humans for more than 99.99 percent of the Earth's existence Life will also continue without humans long after our inevitable extinction In Biocivilisations Dr Predrag Slijepcevic shows how bacteria amoebas plants insects birds whales elephants and countless other species not only preceded human beings but demonstrate elements of how we celebrate human civilisation complex communication agriculture science art medicine and more Humans must try to adopt this wisdom from other biocivilisations that have long preceded our own By rethinking the current scientific paradigm Dr Slijepcevic makes clear that

a transformation from a naive young species into a more mature species in tune with its surroundings will save us from our own violence and the violence we inflict on the rest of our living planet Read this book if you would like to understand the intelligence of living systems Dr Denis Noble University of Oxford

Language, Science, and Structure Ryan M. Nefdt, 2023 This work provides a new framework for understanding some of the most profound theories of human language Ryan M Nefdt touches on philosophical questions of what languages are how they evolved and what the science of language should be He takes insights and results from the natural and formal sciences and translates them into a new domain His book offers the reader new ways of appreciating how the most unique of human traits our ability to process and produce natural language has been and can be studied from a scientific point of view [The Mathematics of Life](#) Ian Stewart, 2011-06-07 Biologists have long dismissed mathematics as being unable to meaningfully contribute to our understanding of living beings Within the past ten years however mathematicians have proven that they hold the key to unlocking the mysteries of our world and ourselves In *The Mathematics of Life* Ian Stewart provides a fascinating overview of the vital but little recognized role mathematics has played in pulling back the curtain on the hidden complexities of the natural world and how its contribution will be even more vital in the years ahead In his characteristically clear and entertaining fashion Stewart explains how mathematicians and biologists have come to work together on some of the most difficult scientific problems that the human race has ever tackled including the nature and origin of life itself

Machines as Agency Christoph Lischka, Andrea Sick, 2015-07-15 This book supports and deepens the existing interfaces between art science and technology transgressing traditional principles and styles of research and selectively overcoming the side by side coexistence in favour of an integrated laboratory of the future Instead of relying on traditional dualisms like nature culture subject object as well as man and machine heterogeneous networks with humans and non humans Latour are opened in shared contexts of agency New momentary propositions are developed meeting the complexity of discovering exploring and inventing things things which do not exist just as given beings The artists and theoreticians can pursue using the tools and techniques of science actively not only to comment them but also to fathom their possibilities and employ them in their artistic and scientific projects *Machines as Agency* is an artistic perspective

The Evolution Delusion Bart Rask, 2021-09-01 Does the field of evolution differ from other sciences The author a reviewer for a major medical journal scrutinized hundreds of scientific references in evolutionary literature adopting the same standards used for studies submitted for medical publication The data show that there are two types of evolution microevolution and macroevolution with a clear boundary between them based upon the presence and absence of empirical evidence respectively The surprising results show that there is a universal disconnect between the data and the conclusions that claim to show the larger changes of macroevolution The author reveals patterns of deviations from standard scientific methods in these studies For the first time evolutionary data have been summarized to describe both what evolution can and cannot accomplish The author shows the reader how to recognize the

different ways in which the evidence for microevolution within and between some species differs from the unsupported macroevolution of most species Previous critiques of macroevolution have been debunked by advocates who have cited a multitude of scientific studies This book goes beyond previous critiques by directly addressing the data from these studies to see if they do in fact support macroevolution focused conclusions Many expert counterarguments against this book's thesis are presented and examined in the context of scientific research to reassure the reader that the author has left no stone unturned in the macroevolution debate A theory is proposed as to why there may be no empirical evidence for macroevolution The book concludes with a section entitled What we see differently There the author shows the reader the differences in perspective between the evolutionist and macroevolution critic as they look at and interpret the very same set of data
