Plant Infection investigates interactions among pathogens host plants the environment time and space and their role in plant infection It describes the principles of infection particularly of the root stem or leaf as they apply to fungi bacteria or viruses It also highlights the dual nature of resistance and suggests theories of host resistance Organized into seven chapters this volume begins with an overview of the relation between the amount of inoculum and the amount of disease it causes It then turns to a discussion of the disease inoculum relations of tobacco mosaic virus how obligate synergism restricts the transmission of pathogens disease inoculum relations in root disease the independent action of spores as inoculum variable factors other than the amount of inoculum that affect plant disease and time as a determining factor of the degree of plant infection The reader is also introduced to endemic disease of plants the implications of endemism for plant resistance to disease the spread of disease via migration of pathogens and the genetics of host pathogen interactions Plant pathologists and plant breeders will gain valuable information from this book

The Gene Hunters Calestous Juma, 2014-07-14 The world is on the verge of receiving new life forms that will profoundly and irrevocably change the global economy the gene hunters who first cloned the gene in 1973 are now not only modifying existing species but also creating new plants and animals Ready or not for such awesome power the human race has put itself in a position to govern evolution What will we do with the abilities we now command asks this broad and stimulating book on the role of plant material in economic development Writing in a style that is easily understandable even to those with no background in biotechnology Calestous Juma begins by showing how the importation of plants strengthened the British Empire and brought the United States to global agricultural superiority He goes on to explore the current international competition for genetic material and the potential impact of biotechnology on the relationship of the developed and developing world Juma points out that biotechnology poses real dangers to the third world Often one of the few exportable resources that a developing country possesses is an unusual or rare crop but biotechnological techniques make possible the cultivation of many such crops outside their natural habitats potentially eliminating the need to import the crops from the countries in which they grow indigenously After discussing the threat of biotechnology Juma comes full circle and points out that it does not have to be a threat Actually tremendous benefits could accrue to the third world from biotechnology if and only if that new technology is adapted to its needs Originally published in 1989 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905
