best new business models fail when they aren't supported by moral competence and how to bake integrity in from the very beginning. Entrepreneurs rarely launch ventures with an explicit moral focus. Their most costly missteps are frequently moral, not strategic or operational. When entrepreneurs lack consistent moral competence, their businesses usually falter or fail completely. Even exceptional business models can't survive without morally competent leadership. **MALAPY 2022** Sitti Hartinah, Elchin Ghasimov, Arif Zainudin, Habibullah Akhmad, Purwo Susongko, Menza Mam Mesfin, 2022-08-15. The best performing companies have leaders who actively apply moral values to achieve enduring personal and organizational success. Lennick and Kiel extensively identify the moral components at the heart of the recent financial crisis and illuminate the monetary and human costs of failed moral leadership in global finance, business, and government. The authors begin by systematically defining the principles of moral intelligence and the behavioral competencies associated with them. Next, they demonstrate why sustainable optimal performance on both an individual and organizational level requires the development and application of superior moral and emotional competencies. Using many new examples and real case studies and new interviews with key business leaders, they identify connections between moral intelligence and higher levels of trust, engagement, retention, and innovation. Readers will find specific guidance on moral leadership in both large organizations and entrepreneurial ventures as well as a new practical step-by-step plan for measuring and strengthening every component of moral intelligence from integrity and responsibility to compassion and forgiveness. The authors also provide practical ways for readers to develop their own moral and emotional competencies. **Building Moral Intelligence** Michele Borba, 2001-05-29. The Complete Plan For Raising Good Kids From 3-15. **Perspectives on Spiritual Intelligence** Marius Dorobantu, Fraser Watts, 2024-07-29. The topic of intelligence involves questions that cut deep into ultimate concerns and human identity, and the study of intelligence is an ideal ground for dialogue between science and religion. This volume investigates the notion of spiritual intelligence from a variety of perspectives, bringing together contributions from theology, computer science, linguistics, psychology, biology, and cognitive science. It defines spiritual intelligence as processing things differently, not processing different things, and aims to describe it in naturalistic terms. Spiritual intelligence is not regarded as a separate mental module or a magical ability to interact with the supernatural, but rather as a specific, more spiritual way of engagement with reality which has observable cognitive, phenomenal, and linguistic characteristics. The book is valuable reading for those working at the interface between science and spirituality. **Moral**

Overcoming Managerialism Robert Spillane,Jean-Etienne Joullié,2022-05-09 Managerialism has often been defined as an ideology according to which the effective and efficient running of commercial firms not for profit organizations and public administrations is delivered by individuals who possess superior formal knowledge and expertise in management Arguing to their exclusive education managers deprive employers and employees of decision making power and ensconce themselves systematically in the power structure of workplaces to advance their own interests and agenda The central thesis of Overcoming Managerialism is that resisting and overcoming managerialism necessitates the re establishing of the conceptual

distinction between power and authority Second it requires the rehabilitating of authoritative management as a protection against authoritarian practices Authority properly conceived redirects power to technical experts and professionals and thereby limits managerial power The authors discuss ten contentions which taken together represent a theory of the foundation of management in which authority power and rhetoric are central concepts This book combines academic scholarship with a readable critique of managerialism It will be of interest to both management scholars and students

Automation, Innovation and Work Jon-Arild Johannessen, Helene Sætersdal, 2020-03-11 Artificial intelligence will not necessarily create a super intelligent human robot however it is very probable that intelligent robots and intelligent informats will bring about a form of super globalization in which money and goods are prioritized over people and democracy and where the widespread use of casual labour that is short term contracts will become the most common form of employment relationship It is also very likely that artificial intelligence will bring about what is known as singularity This term is used to describe a situation where intelligent robots from a rational and logical perspective are smarter than humans i e the development of AI This book explores the impact that these intelligent robots and intelligent informats will have on social and societal development The author tackles the question of singularity from three distinct standpoints technological singularity the intelligence of machines compared to that of humans which he argues will bring about a qualitatively new labour market economic singularity the consequences for work relationships value creation and employment which he asserts will promote full automation result in precarious contracts with low salaries and in some countries possibly lead to the introduction of a universal basic income and social singularity the consequences of technological and economic singularity for democratic processes bureaucratic procedures for exercising authority and control and the direction in which society will develop in addition to the emergence of new social institutions which Johannessen says will promote a transition from representative democracy to genuine democracy The book will appeal to academics researchers and students of economic sociology and political economy as well as those focusing upon the emerging innovation economy It will also find an audience among professionals and policymakers keen to understand the impact the Fourth Industrial Revolution will have on organizations individuals and society at large

Ethics at the Cinema Ward E. Jones, Samantha Vice, 2011-01-07 This volume of contributed previously unpublished essays focuses on general theoretical meta ethical and aesthetic issues in philosophy and the ways in which they manifest themselves in film *Empirically Informed Ethics: Morality between Facts and Norms* Markus Christen, Carel van Schaik, Johannes Fischer, Markus Huppenbauer, Carmen Tanner, 2013-10-07 This volume provides an overview of the most recent developments in empirical investigations of morality and assesses their impact and importance for ethical thinking It involves contributions of scholars both from philosophy theology and empirical sciences with firm standings in their own disciplines but an inclination to step across borders in particular the one between the world of facts and the world of norms Human morality is complex and probably even messy and this clean distinction

becomes blurred whenever one looks more closely at the various components that enable and influence our moral actions and ethical orientations. In that way, morality may indeed be located between facts and norms, and an empirically informed ethics that is less concerned with analytical purity but immerses into this moral complexity may be an important step to make the contributions of ethics to this world more valuable and relevant.

Artificial Intelligence, Automation and the Future of Competence at Work Jon-Arild Johannessen, 2020-12-07. Artificial intelligence and the autonomous robots of the Fourth Industrial Revolution will render certain jobs and competences obsolete but will also create new roles which in turn require new sets of skills. They will also transform how we produce, distribute and consume, as well as how we think. Rather than a linear understanding of evolutionary processes, we will develop a more interactive and circular interpretation. This book offers a unique and holistic perspective on the future of work in the context of industry 4.0. It discusses the globalization of capital markets, how artificial intelligence can help organizations to be more competitive, and the new role of leadership in this technological landscape. The author argues that there are four categories of competences which will be required in order to maintain the relevance of human skills and expertise in the innovation economy. The new jobs that come into being will lend themselves to a particular set of skills. General competences will be necessary for roles involving the 4Cs of communication, creativity, collaboration and change. Specific or STEM competences will be called for across the science, technology, engineering and mathematics sectors. Human competences will lend themselves to positions comprising the SELC framework of social, emotional, leadership and cultural skills. Critical or REVE competences will be in demand for roles

embracing reflection ethics values and the environment The book provides a human centric view of the current technological advancements of artificial intelligence and robotics and offers a positive outlook for human actors seeking continued relevance It will appeal to scholars and students of the innovation economy the knowledge society and the coming Fourth Industrial Revolution
