EYE AND FACE PROTECTION

According to OSHA's eye and face protection standard, employers are responsible for ensuring that each affected employee uses the appropriate eye or face protection when exposed to eye or face hazards from flying particles, molten metal, liquid chemicals, acids or caustic liquids, chemical gases or vapors, or potentially injurious light radiation.

EMPLOYER RESPONSIBILITY

Employers are responsible for making sure the proper engineering controls are in place to reduce eye injuries and to protect against ocular infection exposures. They must also conduct a hazard assessment to determine the appropriate type of eye and face protective equipment that is needed for each task. They can do this by following OSHA's standards for eye and face protection.

PRESCRIPTION LENSES

Employees who wear prescription lenses must wear eye protection that incorporates the prescription into its design. Workers can also wear eye protection over the prescription lenses that does not interfere with the proper position of the prescription lenses or protective lenses.

ID AND SHADE NUMBER

Eye and face PPE must be distinctly marked to identify the manufacturer, and the employer must ensure that workers are using equipment with filter lenses that have a shade number that is appropriate for the work being performed and that will protect them from injurious light radiation.

LASER PROTECTION

Workers who are exposed to laser beams must use suitable laser safety goggles that protect against the specific wavelength of the laser and have the adequate optical density (O.D.). All protective goggles must have a label that identifies the laser wavelengths for which use is intended, the O.D. of those wavelengths, and the visible light transmission.

SIDE PROTECTION

Employees must use eye protection that provides side protection from flying object hazards. In these cases, detachable side protectors, such as clip-on or slide-on side shields, that meet the standard requirements are acceptable.

Spellman, 1998-10-02 Make your environmental lab and lab technicians work practices the safest possible Protect workers from hazardous material they handle on site Protect the civilian population from harm in a hazardous materials emergency Prevent accidents before they happen The purpose of Safe Work Practices for the Environmental Laboratory is twofold 1 For the person designated as the laboratory s Chemical Hygiene Officer or Safety Officer this text is a user friendly reference that will provide a format a template a guide to compliance with OSHA's Laboratory Standard 29 CFR 1910 145 and 2 for the person who is assigned to work in the environmental laboratory this user friendly text provides the information needed not only to perform routine laboratory tasks correctly but also to perform them safely The environmental lab is involved with performing analytical testing and sampling protocols relating to air soil

biosolids sludges drinking water wastewater groundwater stormwater waste characterization petroleum products and HRSD NPDES effluent studies Many wastewater treatment plants and water works have their own environmental laboratories These labs primarily perform analysis of process conditions to ensure optimization of the process However even these small labs a few are quite large perform environmental sampling and therefore are environmental labs. The actual genesis of the environmental laboratory can be attributed to the environmental regulations that have been generated by USEPA AOAC ASTM NIOSH OSHA and other regulatory and advisory entities The typical environmental laboratory contains several different types of hazards the lab worker must quard against This is the case even though modern environmental laboratories have been designed to take maximum advantage of engineering controls that work to engineer out most hazards The main hazard discussed in this text has to do with hazardous materials dangerous chemicals and compounds and the effect they can have on work practices OSHA is quite specific in regard to protecting the laboratory worker from harm that could result from handling hazardous materials these specifics are discussed in detail throughout this text It is important to point out that this text will provide the user with more than just a safety book For example this text provides the user with a sample Chemical Hygiene Plan it discusses various safe work practices for standard operating procedures normally performed in the environmental laboratory and it discusses procedures to use for emergency response activities such as clean up of chemical spills The bottom line is that probably the most important benefit to be derived from using this text is the exposure the user receives to the lessons and examples presented throughout the text these lessons learned and examples provide information on how to make your environmental laboratory and the performance of your individual work practices safer When you get right down to it isn t this what a safety text should be all about
