Osteoporosis in Men Eric S. Orwoll, John P. Bilezikian, Dirk Vanderschueren, 2009-11-30. Since the publication of the first edition, the U.S. Surgeon General released the first ever report on bone health and osteoporosis in October 2004. This report focuses even more attention on the devastating impact osteoporosis has on millions of lives. According to the National Osteoporosis Foundation, 2 million American men have osteoporosis, and another 12 million are at risk for this disease. Yet, despite the large number of men affected, the lack of awareness by doctors and their patients puts men at a higher risk that the condition may go undiagnosed and untreated. It is estimated that one fifth to one third of all hip fractures occur in men. This second edition brings on board John Bilezikian and Dirk Vanderschueren as editors with Eric Orwoll. The table of contents is more than doubling with 58 planned chapters. The format is larger 8.5 x 11. This edition of *Osteoporosis in Men* brings together even more eminent investigators and clinicians to interpret developments in this growing field and describe state-of-the-art research as well as practical approaches to diagnosis, prevention, and therapy. Brings together more eminent investigators and clinicians to interpret developments in this growing field. Osteoporosis in Older Persons Gustavo Duque, Douglas P. Kiel, 2016-07-11. This new edition includes the most up-to-date information about the pathophysiology and new therapeutic alternatives for osteoporosis of advanced age. It is written by investigators, clinicians, and basic scientists in the field of aging bone research. It was just recently that a new syndrome, osteoporosis of advanced age, was recognized as a new entity with its own pathophysiology and potential treatments. Unfortunately, and despite the fact that hip fractures are mostly a consequence of this process, and apart from the first edition of this book, there are few publications about this subject. The first edition of this book demonstrated that there is a need to understand the particular features of osteoporosis in older persons, which is the main aim of this book. The institutions where the authors are affiliated are highly recognized as the main centers in aging bone research. As an innovation, the second edition includes some aspects of muscle and bone interaction, focusing on the impact of age-related muscle loss (sarcopenia) on the pathogenesis of falls and fractures in older persons. As in the previous edition, this book is expected to be the reference guide for geriatricians, gerontologists, and bone biologists, as well as medical trainees, in order to understand the mechanisms of senile osteoporosis with a practical approach to the treatment of its consequences.
