Scott, 2020-02-01 In the years since the new mobilities paradigm burst onto the social scientific scene scholars from various disciplines have analyzed the social cultural and political underpinnings of transport contesting its long dominant understandings as defined by engineering and economics Still the vast majority of mobility studies and even key works that mention the good life and its dependence on the car fail to consider mobilities in connection with moral theories of the common good In Assembling Moral Mobilities Nicholas A Scott presents novel ways of understanding how cycling and driving animate urban space place and society and investigates how cycling can learn from the ways in which driving has become invested with moral value By jointly analyzing how driving and cycling reassembled the good city between 1901 and 2017 with a focus on various cities in Canada in Detroit and in Oulu Finland Scott confronts the popular notion that cycling and driving are merely antagonistic systems and challenges social scientific research that elides morality and the common good Instead of pitting bikes against cars Assembling Moral Mobilities looks at five moral values based on canonical political philosophies of the common good and argues that both cycling and driving figure into larger more important moral assemblages of mobility finally concluding that the deeper meta lesson that proponents of cycling ought to take from driving is to focus on ecological responsibility equality and home at the expense of neoliberal capitalism Scott offers a fresh perspective of mobilities and the city through a multifaceted investigation of cycling informed by historical lessons of automobility **The national portrait gallery [plates, with descriptive letterpress].** National portrait gallery, 1874
