**The Flying Man**

Markus Raffel,Bernd Lukasch,2022-06-27 Of all the men who attacked the flying problem in the 19th century Otto Lilienthal was easily the most important His greatness appeared in every phase of the problem No one equaled him in power to draw new recruits to the cause no one equaled him in fullness and dearth of understanding of the principles of flight no one did so much to convince the world of the advantages of curved wing surfaces and no one did so much to transfer the problem of human flight to the open air where it belonged These words were spoken by Wilbur Wright who successfully accomplished the first powered flight together with his brother Orville in 1903 on the sand dunes of the Outer Banks off the coast of North Carolina Wilbur was talking about the most important of their predecessors Otto Lilienthal Lilienthal attracted worldwide attention due to the spectacular photographs showing him in flight made possible by technology that had only just been developed by him This fortuitous union between a pioneer of aviation and the pioneers of so called instantaneous photography is responsible for the immense contemporary popularity of Lilienthal s flights around the globe the first ever free flights performed by man This book traces the life of the German aviation pioneer focusing on the designs of his many aircraft and the photographic documentation that has survived The presentation ends with a remarkable research project

conducted by one of the authors right up to and including his own training exercises with Lilienthal's normal soaring apparatus and large biplane. This project offered new insight into Lilienthal's work and also led to a spectacular aerial meeting of Lilienthal's 1895 biplane and the Wright brothers' 1902 biplane at a historic location on the Outer Banks. The book provides access to video material largely stemming from this project.

### **Zwischen Evolution und Revolution - Der Werkstoffwandel im Flugzeugbau**

Philipp Hassinger, 2014-05-14 So you're telling me that people used to make airplanes out of wood out of lumber I don't believe you. You're kidding me. For the flugger to be either heavier or lighter than air, it must consist of materials that are best in the best case. As inappropriate, bamboo and cloth also caused suspicion of the manufacturer and user. The revolution of the aircraft technology system should have been from earlier from the most modern materials. It consists of completely different materials. It shows that they were indeed the most suitable. This dogma has lost its validity today. And today it causes problems due to this constraint to the most modern materials. The example of aircraft construction provides interesting answers to the question why certain technologies are not adopted. It proves how decisive and different the influence of the user on the development of a technology is.
