Reflecting on our Changing Climate, from Fear to Facts Constantin Cranganu, 2024-03-07 This book contains reflections about climate change an intrinsic reality of our planet's history over the past 4.6 billion years including both natural and anthropogenic variations More recently the phrase climate change has become a euphemism for carbon dioxide emissions While focusing on CO2 emissions is crucial for understanding climate change solely using this term in scientific discussions may lead to overlooking other complex factors contributing among other things to extreme weather events potentially affecting the quality of evidence analysis The shift towards using climate change interchangeably with carbon dioxide emissions within scientific circles while highlighting a key driver necessitates ensuring comprehensive discussions that encompass the diverse evidence related to all climate sub systems Therefore using the phrase like a changing climate opens a bigger umbrella that facilitates covering multiple and complex climate manifestations The book will be useful to students researchers and policy makers working and studying in the vast and often contentious landscape of climate change debates

Our Changing Climate Chad M. Kauffman,2015 **Changing Climate, Changing Worlds** Meredith Welch-Devine,Anne Sourdri1,Brian J. Burke,2020-04-07 This book explores how individuals and communities perceive and understand climate change using their observations of change in the world around them Because processes of climatic change operate at spatial and temporal scales that differ from those of everyday practice the phenomenon can be difficult to understand However flora and fauna which are important natural and cultural resources for human communities do respond to the pressures of environmental change Humans in turn observe and adapt to those responses even when they may not understand their causes Much of the discussion about human experiences of our changing climate centers on disasters and extreme events but we argue that a focus on the everyday on the microexperiences of change has the advantage of revealing how people see feel and make sense of climate change in their own lives The chapters of this book are drawn from Asia Europe Africa and South and North America They use ethnographic inquiry to understand local knowledge and perceptions of climate change and the social and ecological changes inextricably intertwined with it Together they illustrate the complex process of coming to know climate change show some of the many ways that climate change and our responses to it inflict violence and point to promising avenues for moving toward just and authentic collaborative responses
