Our Cosmic Universe:

Our Cosmic Universe John Kraus,1980 *Born With a Bang* Jennifer Morgan,2002-01-01 Presents a history of the universe from the Big Bang to the formation of Earth in the form of a letter written by the thirteen billion year old universe itself to an Earth child **Our Cosmic Story** Mathew Anderson,2017-01-06 Our cosmic story explores the potential our universe has for fostering life and civilization The book starts by looking back at the story of Earth and our civilization and then evaluates the idea that other sentient creatures in the cosmos may be doing the same [Our Cosmic Origins](#) A. H. Delsemme,1998 Our Cosmic Origins first published in 1998 traces the remarkable story of the emergence of life and intelligence right through the complex evolutionary history of the Universe Armand Delsemme weaves together a rich tapestry of science bringing together cosmology astronomy geology biochemistry and biology in this wide ranging book In following the complex chronological story we discover how the first elements formed in the early Universe how stars and planets were born how the first bacteria evolved towards a plethora of plants and animals and how the coupling of the eye and brain led to the development of self awareness and ultimately intelligence Professor Delsemme concludes with the tantalising suggestion that the existence of alien life and intelligence is likely and examines our chances of contacting it This provocative book provides the general reader with an accessible and wide ranging account of how life evolved on Earth and how likely it is to exist elsewhere in the Universe [The View From the Center of the Universe](#) Joel R. Primack,Nancy Ellen Abrams,2007-08-07 In this strikingly original book a world renowned cosmologist and an innovative writer of the history and philosophy of science uncover an astonishing truth Humans actually are central to the universe What does this mean for our culture and our personal lives The answer is revolutionary a science based cosmology that allows us to understand the universe as a whole and our extraordinary place in it **Our Cosmic Origin** Ismael Perez,2021-09-11 In this new and exciting book you ll find out the true history of earth as it connects to the suppressed history of our galaxy In a way where science philosophy and spirituality finally come together as one You ll come to understand the true origin of our species our cosmic ancestry as it relates to endless worlds other dimensions and multiple universes I will open up your eyes about earths place in the multiverse and about a greater organization of cosmos that is being orchestrated by the multiple councils that exist on every level from the central universe to the local planetary systems Most importantly you will have a better understanding of our reality in terms of evidence that is currently being suppressed by a controlled Academia and scientific consensus [Our Cosmic Universe](#) John D. Kraus,1980 **Our Cosmic Ancestry in the Stars** Chandra Wickramasinghe, Ph.D.,Kamala Wickramasinghe,Gensuke Tokoro,2019-05-14 An exploration of how acceptance of panspermia will soon change history Offers extensive scientific proof of panspermia that life arose on Earth via comets and that evolution is seeded by viruses arriving via comets and interstellar dust Explores the major philosophical psychological cultural religious and environmental ramifications of the acceptance of this new scientific worldview Mainstream consensus is that life arose on

Earth spontaneously out of primordial soup Yet this theory as well as the Darwinian survival of the fittest concept as it relates to major steps in evolution has no scientific basis or proof Where then did life come from As the authors show with conclusive scientific evidence life came from space a concept known as panspermia We humans and all other life on Earth evolved over millennia in response to viruses that arrived via comets and we continue to do so Exploring the philosophical psychological cultural and environmental ramifications of the acceptance of panspermia the authors show how the shift will be on par with the Copernican Revolution when it was finally accepted that the Earth was not the center of the Universe Explaining the origins of the panspermia theory in the work of the late Sir Fred Hoyle the authors reveal the vast body of evidence that has accumulated over the past 4 decades in favor of the cosmic origins of life including viral inserts found in DNA that have shaped our human genome over millions of years They show how the tiniest of viruses microscopic animals tardigrades and even seeds have been found to be natural cosmonauts The authors also show how space borne viruses play a crucial role in the positive evolution of life and that our entire existence on this planet is contingent on the continuing ingress of cosmic viruses Revealing how panspermia offers answers to some of humanity's longstanding questions about the origins of life the authors discuss the impact this shift in understanding will have on our relationship with the Earth and on culture history and religion And perhaps the most dramatic ramification of all is that acceptance of panspermia means acceptance that Earth is not unique that other life filled planets exist and intelligent life is common in the Universe Not only did we come from space but we are not alone

Our Cosmic Habitat Martin Rees, 2017-11-21 Our universe seems strangely biophilic or hospitable to life Is this happenstance providence or coincidence According to cosmologist Martin Rees the answer depends on the answer to another question the one posed by Einstein's famous remark What interests me most is whether God could have made the world differently This highly engaging book explores the fascinating consequences of the answer being yes Rees explores the notion that our universe is just a part of a vast multiverse or ensemble of universes in which most of the other universes are lifeless What we call the laws of nature would then be no more than local bylaws imposed in the aftermath of our own Big Bang In this scenario our cosmic habitat would be a special possibly unique universe where the prevailing laws of physics allowed life to emerge Rees begins by exploring the nature of our solar system and examining a range of related issues such as whether our universe is or isn't infinite He asks for example How likely is life How credible is the Big Bang theory Rees then peers into the long range cosmic future before tracing the causal chain backward to the beginning He concludes by trying to untangle the paradoxical notion that our entire universe stretching 10 billion light years in all directions emerged from an infinitesimal speck As Rees argues we may already have intimations of other universes But the fate of the multiverse concept depends on the still unknown bedrock nature of space and time on scales a trillion trillion times smaller than atoms in the realm governed by the quantum physics of gravity Expanding our comprehension of the cosmos **Our Cosmic Habitat** will be read and enjoyed by all those scientists and nonscientists alike who are as fascinated by

entangled fields n folding in neverending variation or enference The current planetary crisis has emerged due to an accidental evolutionary alignment narrowing and impoverishment of that matrix s indeterminacy that appeared gradually and eventually with bipedalism and which created an imbalance between the larger proprioceptive field and its brain and made the atrophied body extend itself technically in geometric fields gradually covering the planet along with its fears with disastrous consequences that are unleashing an unprecedented type of mass extinction and species suicide The reply to this crisis which is urgently due if we are to reduce even slightly the collapse coming up over the next decades is in recovering a lost sensorimotor plasticity which is also cognitive affective and relational plasticity through developing movement techne for cultivating Body Intelligence BI reversing and taking elsewhere the failed evolution culminating in AI stepping down from humanist supremacist pedestals undoing our dependency upon unsustainable killing machines of sedentary consumerism that impoverish experience stopping the reproduction of a species that has become plague by reversing heteronormative reproductive dogmas till we reach preagricultural population levels and recovering the joys of moving with the world in symbiotic mutation towards unprecedented evolutionary variations this is our cosmic responsibility for all life on Earth The book s structure expresses Enference Theory with regard to how processes of becoming have a triple movement an incipency unfolding the field Part I a condensation expansion where the field acquires full consistency Part II and a resonance or memory of the field relating to other fields Part III Part II subtitled R evolution Technologies includes Books 4 5 and 6 and is by far the longest volume elaborating in depth the book s proposals in a triple movement It first exposes the technologies of variation in nature Book 4 followed by the technologies of reduction in the Algoricene Book 5 and finally the possibilities for overcoming the reductive fold Book 6 Book 4 proposes a swarming chaomology as theory of orgiastic evolution culminating in the concept of metabiosis life as indeterminate symbiotic mutation Book 5 diagnoses the regimes that have formatted movement and presents the theory of the Algoricene or Age of Extinctions and Algorithms It exposes a kinetic ontology genealogy and dynamics of power An interlude discusses post trans and metahumanism and a second part of the book unfolds a radical critique of the Planetary Holocaust Book 6 unfolds metaformance aesthetics and metahuman politics including the theory of metaformativity the ontotacking pragmatics and a choral Dionysian ontology where the author also discusses at length his own techniques and art projects involving a radical challenge to human supremacism to face the extinction challenge now threatening all life on Earth toward an Earth liberation and regeneration
