Our Evolving Earth Michael L. McKinney, Pearson Custom Publishing, Frederick K. Lutgens, Edward J. Tarbuck, 1995-08

The Asteroid Impact Connection of Planetary Evolution Andrew Y. Glikson, 2013-03-25 When in 1981 Louis and Walter Alvarez the father and son team unearthed a tell tale Iridium rich sedimentary horizon at the 65 million years old Cretaceous Tertiary boundary at Gubbio Italy their find heralded a paradigm shift in the study of terrestrial evolution Since the 1980s the discovery and study of asteroid impact ejecta in the oldest well preserved terrains of Western Australia and South Africa by Don Lowe Gary Byerly Bruce Simonson Scott Hassler the author and others and the documentation of new exposed and buried impact structures in several continents have led to a resurgence of the idea of the catastrophism theory of Cuvier previously largely supplanted by the uniformitarian theory of Hutton and Lyell Several mass extinction of species events are known to have occurred in temporal proximity to large asteroid impacts global volcanic eruptions and continental splitting Likely links are observed between asteroid clusters and the 580 Ma acritarch radiation end Devonian extinction end Triassic extinction and end Jurassic extinction New discoveries of 3.5 Ga old impact fallout units in South Africa have led Don Lowe and Gary Byerly to propose a protracted prolongation of the Late Heavy Bombardment 3.95 Ga in the Earth Moon system Given the difficulty in identifying asteroid impact ejecta units and buried impact structures it is likely new discoveries of impact signatures are in store which would further profoundly alter models of terrestrial evolution

Processes on the Early Earth W. U. Reimold, Roger Lawrence Gibson, 2006-01-01 This Special Paper presents a collection of 19 papers contributed to a joint Field Forum organized by the Geological Society of America and the Geological Society of South Africa in July 2004 in the Barberton Greenstone Belt and the Vredefort Dome South Africa The papers cover a wide variety of themes including Archean and Proterozoic crust formation and geodynamics with an appraisal of evidence of Archean subduction processes the significance of impacts in the evolution of the early Earth s crust traces of early life in Archean environments of Australia and South Africa and related studies of depositional environments and processes affecting the giant Witwatersrand gold deposit Publisher s website

Witness To A Changing Earth C. Hans Nelson, 2021-09-07 This book is of interest to all of you willing to gain perspective both in time and in depth about the global environmental crises we are facing in the Anthropocene as well as pondering potential solutions Humans are dominating the Earth s environment and causing global changes in the most recent geologic time called the Anthropocene Global changes are caused by both natural events like earthquakes and volcanic eruptions or caused by humans like global warming and pollution of air water and soil The author documents all types of global changes beyond climate change pointing out the risks for humanity when all these changes combine in time Hans Nelson describes global changes while traveling through an earth scientist s 60 year global journey Throughout his memoirs the author provides many humorous examples of adventures taking place during the scientific studies on land and at sea He makes suggestions for a sustainable planet and shows that humans worldwide in the

past and can in the future work together on solutions for global change problems Students can use this book to learn about the many aspects of global change and methods that marine geologists use to obtain data on geologic hazards resources and environmental changes Engineering Geology for a Habitable Earth: IAEG XIV Congress 2023 Proceedings, Chengdu, China Sijing Wang,Runqiu Huang,Rafiq Azzam,Vassilis P. California's Amazing Geology Donald R. Prothero, 2024-03-21 California has some of the most distinctive and unique geology in the United States It is the only state with all three types of plate boundaries an extraordinary history of earthquakes and volcanoes and many rocks and minerals found nowhere else The Golden State includes both the highest and lowest points in the continental US and practically every conceivable geological feature known This book discusses not only the important geologic features of each region in California but also the complex geologic four dimensional puzzle of how California was assembled beginning over two billion years ago The author provides an up to date and authoritative review of the geology and geomorphology of each geologic province as well as recent revelations of the tectonic history of California's past There are separate chapters on some of California's distinctive geologic resources including gold oil water coastlines and fossils An introductory section describes basic rock and mineral types and fundamental aspects of plate tectonics so that students and other readers can make sense of the bizarre wild and crazy jigsaw puzzle that is California's geological history In this second edition the book has an entirely new final section California's Environmental Hazards and Challenges with new chapters on California's landslides air and water pollution renewable energy and the future of climate change in California Key Features Thoroughly updates the market leading textbook on California's geology Is written by an author with 30 years of teaching geology and leading field trips in California Introduces California's unique geological history Covers fundamentals of geology Characterizes specific geographical regions of California Describes major geological resources of California Summarizes the paleontology of California Reviews the likely impact of climate change on California's environment Related Titles Hollocher K A Pictorial Guide to Metamorphic Rocks in the Field ISBN 978 11380 2630 8 Glavovic B et al Climate Change and the Coast Building Resilient Communities ISBN 978 04154 6487 1 **A Natural History of Time** Pascal Richet, 2009-10-15 The quest to pinpoint the age of the Earth is nearly as old as humanity itself For most of history people trusted mythology or religion to provide the answer even though nature abounds with clues to the past of the Earth and the stars In A Natural History of Time geophysicist Pascal Richet tells the fascinating story of how scientists and

philosophers examined those clues and from them built a chronological scale that has made it possible to reconstruct the history of nature itself Richet begins his story with mythological traditions which were heavily influenced by the seasons and almost uniformly viewed time cyclically The linear history promulgated by Judaism with its story of creation was an exception and it was that tradition that drove early Christian attempts to date the Earth For instance in 169 CE the bishop of Antioch for instance declared that the world had been in existence for 5 698 years and the odd months and days Until the mid eighteenth century such natural timescales derived from biblical chronologies prevailed but Richet demonstrates with the Scientific Revolution geological and astronomical evidence for much longer timescales began to accumulate Fossils and the developing science of geology provided compelling evidence for periods of millions and millions of years a scale that even scientists had difficulty grasping By the end of the twentieth century new tools such as radiometric dating had demonstrated that the solar system is four and a half billion years old and the universe itself about twice that though controversial questions remain The quest for time is a story of ingenuity and determination and like a geologist Pascal Richet carefully peels back the strata of that history giving us a chance to marvel at each layer and truly appreciate how far our knowledge and our planet have come

Abiotic Selection in Earth Surface Systems Jonathan D. Phillips, 2025-07-22 This book is about abiotic selection in Earth surface systems It demonstrates that seemingly purposeful or goal oriented phenomena in Earth's processes actually emerge from selection dynamics While many think of selection in the context of biological evolution it extends to abiotic processes crucial in understanding Earth's function and evolution The author delineates four forms of geophysical selection gradient resistance network and thermodynamic These selections manifest in various natural systems from fluid flows shaping landscapes to the efficient transport of mass and energy The book acknowledges the interplay of geophysical and ecological processes employing them as pedagogical tools Structured with an introduction to abiotic selection and its context the book delves into the application of key principles such as thermodynamics and flow dynamics to Earth surface systems Each subsequent chapter examines one of the four types of selection featuring diverse real world examples from climate dynamics to oceanography Geared toward researchers graduate students and practitioners in fields such as geophysics geology geography hydrology and ecosystem sciences it also appeals to those interested in evolutionary thinking beyond traditional life sciences

systems a prehistory scale of human development a survey of sequence stratigraphy and an extensive compilation of stable isotope chemostratigraphy This book is an essential reference for all geoscientists including researchers students and petroleum and mining professionals The presentation is non technical and illustrated with numerous colour charts maps and photographs The book also includes a detachable wall chart of the complete time scale for use as a handy reference in the office laboratory or field The most detailed international geologic time scale available that contextualizes information in one single reference for quick desktop access Gives insights in the construction strengths and limitations of the geological time scale that greatly enhances its function and its utility Aids understanding by combining with the mathematical and statistical methods to scaled composites of global succession of events Meets the needs of a range of users at various points in the workflow researchers extracting linear time from rock records students recognizing the geologic stage by their content

Controversy Catastrophism and Evolution Trevor Palmer, 2012-12-06 In Controversy Trevor Palmer fully documents how traditional gradualistic views of biological and geographic evolution are giving way to a catastrophism that credits cataclysmic events such as meteorite impacts for the rapid bursts and abrupt transitions observed in the fossil record According to the catastrophists new species do not evolve gradually they proliferate following sudden mass extinctions Placing this major change of perspective within the context of a range of ancient debates Palmer discusses such topics as the history of the solar system present day extraterrestrial threats to earth hominid evolution and the fossil record *Origin of the Earth and Moon* Robin M. Canup, Kevin Righter, 2000-11 The age old question of how our home planet and its satellite originated has in recent times undergone a minor revolution The emergence of the giant impact theory as the most successful model for the origin of the Moon has been difficult to reconcile with some aspects of the Earth and the development of an integrated model for the origin of the Earth Moon system has been difficult for this reason However recent technical advances in experimental and isotopic work together with intensified interest in the modeling of planetary dynamics have produced a wealth of new results requiring a rethinking of models for the origin of the Earth and Moon This book is intended to serve as a resource for those scientists working closely in this field while at the same time it provides enough balance and depth to offer an introduction for students or technically minded general readers Its thirty chapters address isotopic and chemical constraints on accretion the dynamics of terrestrial planet formation the impact triggered formation of the Earth Moon system differentiation of the Earth and Moon the origin of terrestrial volatiles and conditions on the young Earth and Moon Covering such subjects as the history and origin of the Moon s orbit water on the Earth and the implications of Earth Moon interactions for terrestrial climate and life the book constitutes a state of the art overview of the

most recent investigations in the field Although many advances have been made in our ability to evaluate competing models of the formation of the Earth Moon system there are still many gaps in our understanding This book makes great strides toward closing those gaps by highlighting the extensive progress that has been made and pointing toward future research

The Cnidaria, Past, Present and Future Stefano Goffredo,Zvy Dubinsky,2016-09-07 This volume presents a broad panorama of the current status of research of invertebrate animals considered belonging to the phylum Cnidaria such as hydra jellyfish sea anemone and coral In this book the Cnidarians are traced from the Earth s primordial oceans to their response to the warming and acidifying oceans Due to the role of corals in the carbon and calcium cycles various aspects of cnidarian calcification are discussed The relation of the Cnidaria with Mankind is approached in accordance with the Editors philosophy of bridging the artificial schism between science arts and Humanities Cnidarians encounters with humans result in a broad spectrum of medical emergencies that are reviewed The final section of the volume is devoted to the role of Hydra and Medusa in mythology and art **Catalogue...authors, Titles, Subjects, and Classes** Brooklyn Public Library,1880
