TREES OF LIFE - OUR FORESTS IN PERIL Brian E. Stout, 2013-12-06 The book challenges the current management of our remaining forestlands and proposes a different approach to our relationship with nature and the implications for the science of forestry It identifies the problem as a people problem resulting from the strong influence of cultural values on scientific principles The European Western culture and the Native American culture are compared to identify opportunities for future changes that can lead to a more eco friendly approach to managing our remaining valuable forested lands Current forest science focuses on the renewable resources to be extracted from the forests rather than the

requirement of maintaining health and diverse forest communities It is a call to observe the complexity of creation by identifying the multitude of relationships that are constantly evolving within each community The book documents the concerns with current management based on the authors personal experience during his 34 year career with one of the worlds leading public forest land managing Agencies the US Forest Service The book concludes with a call to action for all interests if we are to prolong human existence on this planet *Friends of Our Forests* Henry W.
