Bank,2014-12-04 Development economics and policy are due for a redesign In the past few decades research from across the natural and social sciences has provided stunning insight into the way people think and make decisions Whereas the first generation of development policy was based on the assumption that humans make decisions deliberately and independently and on the basis of consistent and self interested preferences recent research shows that decision making rarely proceeds this way People think automatically when deciding they usually draw on what comes to mind effortlessly People also think socially social norms guide much of behavior and many people prefer to cooperate as long as others are doing their share And people think with mental models what they perceive and how they interpret it depend on concepts and worldviews drawn from their societies and from shared histories The World Development Report 2015 offers a concrete look at how these insights apply to development policy It shows how a richer view of human behavior can help achieve development goals in many areas including early childhood development household finance productivity health and climate change It also shows how a more subtle view of human behavior provides new tools for interventions Making even minor adjustments to a decision making context designing interventions based on an understanding of social preferences and exposing individuals to new experiences and ways of thinking may enable people to improve their lives The Report opens exciting new avenues for development work It shows that poverty is not simply a state of material deprivation but also a tax on cognitive resources that affects the quality of decision making It emphasizes that all humans including experts and policy makers are subject to psychological and social influences on thinking and that development organizations could benefit from procedures to improve their own deliberations and decision making It demonstrates the need for more discovery learning and adaptation in policy design and implementation The new approach to development economics has immense promise Its scope of application is vast This Report introduces an important new agenda for the development community

Opinion Dynamics and the Evolution of Social Power in Social Networks Mengbin Ye,2019-02-19 This book uses rigorous mathematical analysis to advance opinion dynamics models for social networks in three major directions First a novel model is proposed to capture how a discrepancy between an individual's private and expressed opinions can develop due to social pressures that arise in group situations or through extremists deliberately shaping public opinion Detailed theoretical analysis of the final opinion distribution is followed by use of the model to study Asch's seminal experiments on conformity and the phenomenon of pluralistic ignorance Second the DeGroot Friedkin model for evolution of an individual's social power self confidence is developed in a number of directions The key result establishes that an individual's initial social power is forgotten exponentially fast even when the network changes over time eventually an individual's social power depends only on the changing network structure Last a model for the simultaneous discussion of multiple logically interdependent topics is proposed To ensure that a consensus across the opinions of all individuals is achieved it turns out that the interpersonal interactions must be weaker than an individual's introspective cognitive process for establishing logical consistency among

the topics Otherwise the individual may experience cognitive overload and the opinion system becomes unstable Conclusions of interest to control engineers social scientists and researchers from other relevant disciplines are discussed throughout the thesis with support from both social science and control literature *Mutual Expectations* Govert Hartogh, 2002-05-31 The law persists because people have reasons to comply with its rules What characterizes those reasons is their interdependence each of us only has a reason to comply because he or she expects the others to comply for the same reasons The rules may help us to solve coordination problems but the interaction patterns regulated by them also include Prisoner's Dilemma games Division problems and Assurance problems In these games the rules can only persist if people can be expected to be moved by considerations of fidelity and fairness not only of prudence This book takes a fresh look at the perennial problems of legal philosophy the source of obligation to obey the law the nature of authority the relationship between law and morality and the nature of legal argument from the perspective of this conventionalist understanding of social rules It argues that since the resilience of such rules depends on cooperative dispositions conventionalism properly understood does not imply positivism
