Brian Greene

Pull Of Negative Gravity:

Pulling G Erik Seedhouse, 2012-09-26 Performing in a high G environment is extremely demanding on the body pulling G forces blood to the body's extremities putting the pilot astronaut or driver at risk of G Induced Loss of Consciousness G LOC In Pulling G Erik Seedhouse describes what it feels like to pull 7 G in a fighter plane and the G pressures on the body when driving a Formula 1 car and many other gravity defying vehicles The book relates for the first time the effects of G in both hyper gravity and microgravity It describes the human response to increased and decreased G and the potentially dangerous effects of high G with particular reference to dynamic injuries sustained in high acceleration environments Pulling G provides an overview of G related research and the development of intervention methods to mitigate the effects of increased and reduced G As well as relating the training required to overcome G forces on the Formula 1 track Erik Seedhouse looks at the G forces encountered in such G environments as ejection from an aircraft launch re entry and zero G The book also considers how artificial gravity can be used to prevent bone demineralization and to reduce the effects of de conditioning in astronauts Erik Seedhouse is eminently qualified to describe the effects of large accelerations on the body In addition to being the author of several previously published Springer Praxis books he has developed astronaut training protocols and is the training director for Astronauts for Hire A4H He is also the Canadian Forces High Risk Acceleration Training Officer
