Pulmonary Immunotoxicology:

Pulmonary Immunotoxicology Mitchell D. Cohen, Judith T. Zelikoff, Richard B. Schlesinger, 2012-12-06 Pulmonary Immunotoxicology is a comprehensive exploration of the effects of various inhaled materials upon the immune system of the respiratory tract. It will be useful to investigators in the field of pulmonary toxicology and immunotoxicology and to those involved in administration and regulation of matters related to inhaled materials. It can also serve as a textbook for a course in pulmonary immunotoxicology at graduate or advanced undergraduate level. Pulmonary Immunotoxicology comprises four sections. The first provides basic background concepts essential for understanding pulmonary immunotoxicology including discussions of the normal structure and function of the respiratory system, its basic immunology, and the manner by which inhaled particles and gases are removed from the air and deposited upon respiratory tract surfaces. The second section provides an overview of the major types of pathological consequences which can arise from immunomodulation within the respiratory tract including hypersensitivity and asthma, inflammation and fibrosis, as well as immunosuppression and autoimmunity. The third section, which comprises the largest portion of the book, deals specifically with major classes of airborne agents that are known to alter the immune function of the respiratory tract. These are arranged into major classes: organic agents, metals, gases, particles, biologics, and complex mixtures. The fourth and final section of the book explores the area of risk assessment, including discussions of the basic concepts of risk assessment as they apply specifically to immunotoxicologic effects upon the lungs and the use of biomarkers as indices of potential pulmonary immunotoxic responses to inhaled materials.

Pulmonary Immunotoxicology Mitchell D. Cohen, Judith T. Zelikoff, Richard B. Schlesinger, 2000-06-30 A reference for investigators in pulmonary toxicology and immunotoxicology and for people involved in administering and regulating matters related to inhaled materials and serviceable as a textbook for a graduate or advanced undergraduate course in pulmonary immunotoxicology. US researchers from academic and industrial laboratories provide information concerning the effects of various inhaled materials on the immune system of the respiratory tract. They cover basic background concepts including the normal structure and function of the respiratory system and its basic immunology, the major types of pathological consequences that can arise from immunomodulation within the respiratory tract, the specific major classes of airborne agents that are known to alter immune function, and risk assessment.
