A Natural History of Time Pascal Richet,2009-10-15 The quest to pinpoint the age of the Earth is nearly as old as humanity itself For most of history people trusted mythology or religion to provide the answer even though nature abounds with clues to the past of the Earth and the stars In *A Natural History of Time* geophysicist Pascal Richet tells the fascinating story of how scientists and philosophers examined those clues and from them built a chronological scale that has made it possible to reconstruct the history of nature itself Richet begins his story with mythological traditions which were heavily influenced by the seasons and almost uniformly viewed time cyclically The linear history promulgated by Judaism with its story of creation was an exception and it was that tradition that drove early Christian attempts to date the Earth For instance in 169 CE the bishop of Antioch for instance declared that the world had been in existence for 5 698 years and the odd months and days Until the mid eighteenth century such natural timescales derived from biblical chronologies prevailed but Richet demonstrates with the Scientific Revolution geological and astronomical evidence for much longer timescales began to accumulate Fossils and the developing science of geology provided compelling evidence for periods of millions and millions of years a scale that even scientists had difficulty grasping By the end of the twentieth century new tools such as radiometric dating had demonstrated

that the solar system is four and a half billion years old and the universe itself about twice that though controversial questions remain The quest for time is a story of ingenuity and determination and like a geologist Pascal Richet carefully peels back the strata of that history giving us a chance to marvel at each layer and truly appreciate how far our knowledge and our planet have come
