**Imperial Technoscience** Amit Prasad, 2014-03-14 A study of science and technology practices that shows how even emergent aspects of research and development remain entangled with established hierarchies In the last four decades during which magnetic resonance imaging MRI has emerged as a cutting edge medical technology and a cultural icon technoscientific imaginaries and practices have undergone a profound change across the globe Shifting transnational geography of tecchnoscientific innovations is making commonly deployed Euro West centric divides such as west versus non west or innovating north versus non innovating south increasingly untenable the world is indeed becoming flatter Nevertheless such dualist divides which are intimately tied to other dualist categories that

have been used to describe scientific knowledge and practice continue to undergird analyses and imaginaries of transnational technoscience Imperial Technoscience puts into broad relief the ambivalent and contradictory folding of Euro west centrism with emergent features of technoscience It argues Euro West centric historicism and resulting over determinations not only hide the vibrant albeit hierarchical transnational histories of technoscience but also tell us little about shifting geography of technoscientific innovations The book utilizes a deconstructive empirical approach to explore entangled histories of MRI across disciplines physics chemistry medicine etc institutions university hospitals industry etc and nations United States Britain and India Entangled histories of MRI it shows better explain emergence and consolidation of particular technoscientific trajectories and shifts in transnational geography of science and technology e g centers and peripheries

**Magnetic Resonance Imaging in Food Science** Brian Hills, 1998-04-17 Hills is probably the best person I can think of to write this book He has the deepest background combined with considerable experience in solving problems with food R G Bryant University of Virginia Food scientists have many

excellent tools at their disposal with which to study food at both the micro and macrostructural levels. But when it comes to analyzing dynamic structural changes in food during processing and storage, none can compare with magnetic resonance imaging (MRI). Still a very young approach, MRI food imaging has contributed greatly to recent advances in food science and promises to yield much more valuable information in the years ahead. Written by a leading pioneer in the field, *Magnetic Resonance Imaging in Food Science* covers the latest in MRI food imaging theory and practice. Written primarily for food scientists and engineers, the book offers a practical unified approach to the subject. Material is organized in three main parts corresponding to the distances of scale probed by MRI studies: namely, the macroscopic, microscopic, and macromolecular. Throughout, the emphasis is on ways in which studies of food undergoing processes can be modeled using the equations of heat, mass, and momentum transport and how those models can be used in process design optimization programs. *Magnetic Resonance Imaging in Food Science* provides researchers with the most up-to-date detailed coverage of traditional and cutting-edge MRI food imaging techniques and technologies, including STRAFI, gradient echo imaging, and functional imaging. Whole plant functional imaging, flow imaging, and rheology and other specialized MRI applications. The roles of food microstructure and molecular relaxation mechanisms in controlling moisture and heat transport. Techniques for modeling structural changes during food processing. *Magnetic Resonance Imaging in Food Science* is an important working resource for all researchers engaged in the never-ending struggle to produce safer, higher quality foods more efficiently.
