Presents cutting edge studies of helicities from different research fields. Helicities play essential roles in numerous geophysical, astrophysical, and magnetohydrodynamic phenomena; thus, they are studied from various disciplinary viewpoints. *Helicities in Geophysics, Astrophysics, and Beyond* draws together experts from different research fields to present an interdisciplinary and integrated approach to helicity studies. This synthesis advances understanding of the fundamental physical processes underlying various helicity-related phenomena. Volume highlights include:

- Concise introduction to fundamental properties of helicities
- Recent developments and achievements in helicity studies
- Perspectives from different fields including geophysics, space physics, solar physics, plasma physics, atmospheric and nonlinear sciences
- A cohesive mathematical, physical, observational, experimental, and numerical strategy for helicity studies
- A synthesized framework for the application of helicity to real-world problems

The American Geophysical Union promotes discovery in Earth and space science for the benefit of humanity. Its publications disseminate scientific knowledge and provide resources for researchers, students, and professionals.

Astronomy and Astrophysics Abstracts, which has appeared in semi-annual volumes since 1969, is devoted to the recording, summarizing, and indexing of astronomical publications throughout the world. It is prepared under the auspices of the International Astronomical Union according to a resolution adopted at the 14th General Assembly in 1970. *Astronomy and Astrophysics Abstracts* aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics. Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months. This time interval is near to that achieved by monthly abstracting journals compared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user. Volume 17 contains literature published in 1976 and received before August 15, 1976; some older literature which was received late and which is not recorded in earlier volumes is also included. We acknowledge with thanks contributions to this volume by Dr J. Bouska, who surveyed journals and publications in the Czech language and supplied us with abstracts in English, and by the Commonwealth Scientific and Industrial Research Organization (CSIRO) Sydney for providing titles and abstracts of papers on radio astronomy. We want to acknowledge valuable contributions to this volume by Zentralstelle für Atomkernenergie Dokumentation, Leopoldshafen, which supported our abstracting service by sending us retrospective literature searches.
