X-Planes: Pushing the Envelope of Flight Steve Pace, 2003. **Vulcan Test Pilot** Tony Blackman, 2007-08-19. In this memoir, the author of *Nimrod: Rise and Fall* details his experience testing the UK's strategic bomber while flying for Avro during the Cold War. In 2007, a restored Avro Vulcan Mark 2 XH558 took to the skies to help commemorate the 25th anniversary of the Falklands conflict. To coincide with this, the memoirs of one of its test pilots, Tony Blackman, was published to great acclaim. Tony flew no less than 105 of the 136 built, logging 850 flights at over 13,277 hours. His book describes in layman's terms what it was like to tame the first prototypes of the monumental delta-wing aircraft and to master the unusual characteristics necessitated by the Vulcan's shape. Although Tony puts the developments, demonstrations, incidents and accidents in their political and historical context, his story is a highly personal one. He explains how this awesome aircraft became a national treasure and captured the imagination of the whole country. His words, descriptions and photographs will make people feel as he did the excitement of handling such an incredibly powerful monster, always in the knowledge that he had to be always in complete control of the monster as it could and did bite back. Praise for *Vulcan Test Pilot*: Highly readable, keeping both the technical reader interested without perplexing the layman. A fine book for both. Logbook. Fascinating, gracefully written and superbly knowledgeable. *Air and Space Magazine*.

Safety in Aviation and Astronautics Simon Ashley Bennett, 2021-11-25. Aviation safety and astronautics safety are taught as technical subjects informed for the most part by quantitative methods. Here as in other fields safety is often framed as an engineering problem requiring mathematics informed solutions. This book argues that the socio technical approach encompassing theories grounded in sociology and psychology such as active learning, high reliability organising, mindfulness, leadership, followership and empowerment has much to contribute to the safety performance of these vital industries. It sets out to inspire professionals to embed the whole system approach into design and operation regimen and describes the reputational and financial benefits to manufacturers and operators that accrue from adopting a whole system approach to design and operation. The book defines the socio technical approach to risk assessment and management in aviation and astronautics. Astronautics is taken to mean the design and operation of vehicles for use beyond the earth's atmosphere. Then demonstrates the strengths and weaknesses of this approach through case studies of for example the Boeing 737 MAX 8 accidents and the loss of the SpaceShipTwo orbiter. Grounding the discourse in familiar case studies engages busy aviation and astronautics professionals. The book's arguments are explained in such a way that they are readily comprehensible to non experts. Key concepts are defined within a glossary. Photographs, charts and diagrams illustrate key points. Written for a practitioner audience specifically aviation and astronautics professionals, this book provides a valuable and accessible social sciences perspective on safety that will be directly relevant to their roles. *Commercial Launch Vehicles: NASA Taking Measures to Manage Delays and Risks: Testimony Before the Subcommittee on Space and Aeronautics, Committee on Science, Space and Technology, U.S. House of Representatives*, **The First Jet Pilot** Lutz Warsitz, Geoffrey Brooks, 2009-04-21. The Comet's Legacy: A Tale of Aviation and Innovation Pasquale De Marco, The DH 106 Comet was the world's first commercial jet airliner. It was a revolutionary aircraft that changed the way people traveled and helped to usher in the jet age. The Comet was developed by de Havilland, a British aircraft manufacturer, in the late 1940s. The aircraft was designed to be a fast, efficient, and comfortable way to travel. It had a sleek, streamlined design and was powered by four de Havilland Ghost turbojet engines. The Comet was also one of the first aircraft to be pressurized, which allowed passengers to fly at higher altitudes without experiencing discomfort. The Comet made its maiden flight in 1949 and quickly entered commercial service. It was an instant success, and airlines around the world began to order the aircraft. The Comet was used to fly passengers on routes across Europe, the Middle East, and Africa. It was also used by the Royal Air Force for military transport. However, the Comet's success was short-lived. In 1954, two Comets crashed within a few months of each other. The cause of the crashes was eventually traced to a design flaw in the aircraft's wings. The Comet was grounded while the problem was fixed, but it never regained its former popularity. Despite its tragic end, the Comet left a lasting legacy on aviation. It was the first commercial jet airliner and helped to usher in the jet age. The Comet also showed the world the potential of jet aircraft and inspired other manufacturers to develop their own jet airliners. Today, the Comet is remembered as a pioneering aircraft that helped to shape the future of aviation. It is a testament to the human spirit of innovation and the desire to explore the skies.
