Main Currents In Western Environmental Thought:

Main Currents In Western Environmental Thought Peter Hay, 2002-02-01 *Main Currents in Western Environmental Thought* provides an inclusive and balanced survey of the major issues debated by Western environmentalists over the last three decades. Peter Hay examines issues in philosophy, religion, politics, and economics as presented or criticized by environmentalists. Topics covered include the roots of environmental philosophy, the development of ecophilosophy, deep ecology, and ecofeminism; how religion relates to environmental values; environmentalists' writings on science and epistemology; animal liberation; the role of place; the economic dimensions of environmental thought; environmental writing in various political traditions; and green writers' critiques of political movements. The work draws from the disciplines of philosophy, political science, psychology, sociology, and cultural studies. Clearly and accessibly written and including a comprehensive bibliography, *Main Currents in Western Environmental Thought* is well suited both as a handbook and guide to the large environmental literature and as a textbook for undergraduate and graduate courses in environmental studies.

Main Currents in Western Environmental Thought Peter Hay, 2002-02-21 Professor Hay, environmental studies U of Tasmania, must have been a patient and long-time follower of environmental debate over the last 35 years to have masterfully untangled the myriad and subtle contentions and changes of heart in ecophilosophy, ecofeminism, eco-religiosity, and spirituality; green critiques of science; green politics; philosophies of place and ecology's relationship to democracy and postmodernism. Hay's Tasmanian provenance seems less weakness than strength since he provides a more international perspective on environmentalism that includes Australia, North America, and Europe. Not only geographically wide-ranging, Hay is ideologically inclusive, bringing into the environmental forum without apology or pride discussions among animal rightists and their critics, and assertions that environmental concern is partially pre-rational. Reading Hay's environmental tome is likely to introduce even seasoned readers to new names: Deborah Slicer, John Rodman, Warwick Fox, Stephen Clark, Ariel Salleh, and so on. New arguments suitable as a primary or secondary text for an advanced undergraduate or graduate class in environmental thought. Annotation copyrighted by Book News Inc. Portland, OR

LaFreniere,2012-07 **Devoted to Nature** Evan Berry,2015-07-21

Devoted to Nature explores the religious underpinnings of American environmentalism tracing the theological character of American environmental thought from its Romantic foundations to contemporary nature spirituality During the Gilded Age and the Progressive Era religious sources were central to the formation of the American environmental imagination shaping ideas about the natural world establishing practices of engagement with environments and landscapes and generating new modes of social and political interaction Building on the work of seminal environmental historians who acknowledge the environmental movement s religious roots Evan Berry offers a potent theoretical corrective to the narrative that explained the presence of religious elements in the movement well into the twentieth century In particular Berry argues that an explicitly Christian understanding of salvation underlies the movement s orientation toward the natural world Theologically derived concepts of salvation redemption and spiritual progress have not only provided the basic context for Americans passion for nature but have also established the horizons of possibility within the national environmental imagination

Developing Place-responsive Pedagogy in Outdoor Environmental Education Alistair

Stewart, 2020-02-25 This book is a rhizomatic curriculum autobiography that charts the author's efforts to develop and promote Australian outdoor environmental education practices that are inclusive of and responsive to the places in which they are performed. Joining philosophical concepts created by Gilles Deleuze and Felix Guattari with William Pinar's autobiographical method for curriculum inquiry, the author re-considers the interrelated concepts, contexts, and complex conversations with colleagues, students, and others that have shaped his approach to curriculum, pedagogy, and research for fifteen years or more. Emphasising the complexity of developing curricula and pedagogies that engage in a respectful and generative way with the natural and cultural history of the Australian continent, the author explicates and enacts his attempts to think differently about the cultural, curricular, and pedagogical understandings that inform the practices of Australian outdoor environmental educators. Outdoor environmental education in Australia has historically been influenced by imported universalist ideas, particularly from the USA and the UK. However, during the last two decades, a growing number of researchers in this field have challenged the applicability of such taken-for-granted approaches and advocated the development of curricula and pedagogies informed by the unique biogeographical and cultural histories of the locations in which educational experiences take place. As this book demonstrates, Alistair Stewart is prominent among the vanguard of Australian outdoor environmental educators who have led such advocacy by combining practical experience with theoretical rigour.
