## **Maintenance Of Knowledge Based Systems:**

**Maintenance of Knowledge-based Systems** Frans Coenen, Trevor J. M. Bench-Capon, 1993 The practical take up of Knowledge Based Systems KBSs is usually described as disappointing One explanation of the reluctance of organisations to make a real commitment to these systems stems from the lack of well defined techniques to engineer them in an acceptable manner Without the assurance of quality that can be given by the use of a proven methodology the risk of investing substantially in these systems will remain a risk too great to be taken One of the chief manifestations of the lack of these techniques is that it is impossible to say with any assurance that it will be possible to maintain the systems so that their useful life can be extended This book is concerned with the maintenance of KBSs providing a balance between the academic and the practical and containing analysis of tools developed in a research project The intention of the book is to move from very general concerns available to all systems through to specific techniques and tools designed to address particular problems in particular representations before concluding with some more general remarks This book is essential reading for anyone whether in a commercial or academic environment who wishes to build a serious Knowledge Based System that will continue to be used over a period of time **SPECIAL FEATURES** Building a Knowledge Based System is not the end of the story the system must be used and during its period of use the knowledge on which it relies will change and develop A Knowledge Based System that is not to become rapidly obsolete must change and develop with it This book addresses this neglected area of maintenance emphasising the specific maintenance tasks required by a Knowledge Based System The book provides a balance between the academic and the practical and containing analysis of tools developed in a research project

If one were forced to use a single key word to describe the decade of the 1980s a very prominent one would be technology Leading the forefront of technology advancement were breakthroughs in electronics Devices that were uncommon or unknown in 1980 became commonplace and almost indispensable by 1989 This trend has continued into the 1990s and it does not seem to be abating in any way Microwave ovens video recorders telephone answering machines compact disc players computers and a host of smaller or less sophisticated devices now appear in most households The development of small and inexpensive computers i.e. personal computers has placed computing resources within reach of many more people In addition many traditional and largely mechanical devices have been enhanced by electronics For example specialized microprocessors are combined with arrays of electronic sensors to control and monitor sophisticated engineering components in most new automobiles In this and many other ways we are touched by the new electronics in almost every aspect of our daily lives Initially personal computers were little more than toys They contained only a small fraction of the computing power of their immediate ancestors the mini computers and mainframe computers However rapid improvements in integrated circuit design and chip manufacture produced regular reductions in size and cost of computer components During the same time processor speed and sophistication increased
