Management, Maintenance and Strengthening of Concrete Structures fib Fédération internationale du béton, 2002-01-01 This report is the result of the work of the former FIP Commission 10 Management and strengthening of concrete structures which replaced to the former FIP Commission 10 Maintenance operation and use in 1995 The former CEB Commission V Operation and Use and in particular its Task Group 5 4 Assessment maintenance and repair also played a role in this report When in 1998 the FIP merged with the CEB to form the fib the well advanced writing was completed by a small editorial group The purpose of the report is twofold to give an overview of the issues relating to the management of concrete structures in general and to add details about assessment and remedial action as these are important technical aspects of management and maintenance systems The more general aspects of asset management are dealt with in Chapter 1 aimed at owners and decision makers Chapters 2 and 3 aimed at consultants and contractors deal with decision making in the assessment process A review of remediation techniques is given in Chapter 3 intended to help in the selection of remedial actions rather than in their execution The report also includes some significant appendices regarding load testing monitoring and fire and also special considerations related to seismic retrofitting Appendix 1 offers keywords that the various actors in this field could use for a common language

Acceptance of Stay Cable Systems Using Prestressing Steels fib Fédération internationale du béton, 2005-01-01 This fib Recommendation gives technical guidelines regarding design testing acceptance installation qualification inspection and maintenance of stay cable systems using prestressing steels strands wires or bars as tensile elements which can be applied internationally This Recommendation is applicable for cable stayed bridges and other suspended structures such as roofs It may also be used for hangers in arch structures and as suspension cables as appropriate This Recommendations has been formulated by an international working group comprising more than 20 experts from administrative authorities universities laboratories owners structural designers suppliers of prestressing steels and stay cable suppliers The text has been written to cover best construction practices around the world and to provide material specifications that are considered to be the most advanced available at the time of preparing this text For ease of use for client designer and cable supplier the complex content has been arranged thematically according to the system components into chapters focusing on performance characteristics requirements and acceptance criteria Requirements and comments have been specified for all parties involved in design and construction in order to aim for a uniform and high quality and durability The interfaces to the structural designer are highlighted The essential subjects are Design and detailing of stay cables including saddles and damping devices Durability requirements and corrosion protection

systems Requirements for the materials Testing requirements for the stay cables Installation tolerances qualification of companies and personnel Inspection maintenance and repair This Recommendation does not cover the technology of stay cables whose tensile elements are ropes locked coil cables etc or which consist of composite materials Nevertheless in many cases the specified performance criteria may also be applicable to these systems although numerical values given for the acceptance criteria may need to be adjusted For these systems it has been difficult to provide multiple protective layers similar to those specified for stay cables made from prestressing steel and therefore the quality of corrosion protection may not be equivalent While extradosed cables have similarities with stay cables generally agreed design and system acceptance criteria are not yet available and therefore this type of cable is not covered Maintenance of Brick and Stone Masonry Structures A.M. Civil Infrastructure Systems: Intelligent Renewal: Proceedings Of The Third International Symposium Franco
 Maceri,Mahendra P Singh,Pol Spanos,Fabio Casciati,1999-01-29 A civil infrastructure system CIS is better defined by its
 interactive effects and integration than by its individual components It transports people and goods delivers clean water
 electric power gas and liquid fuel preserves the environment from pollution facilitates communication and mitigates the
 impact of natural disasters Infrastructure systems are networks and or lifelines of which highways airports canals dams
 bridges embankments mass transit and telecommunication systems etc are important components The increasing demand for
 CIS availability while new constructions may be prevented from environmental considerations and in Europe from
 architectural motivations requires the improvement of the existing CIS In addition recent natural disasters have
 demonstrated the fragility of these systems and the devastating degree of socio economic loss that their failure can bring
 These trends are common in most industrial countries All these countries are in urgent need of cost effective strategies for
 planning design construction maintenance and retrofit of their respective CISs in order to enhance and sustain the current
