Hake,2009-01-16 Maize is one of the world s highest value crops with a multibillion dollar annual contribution to agriculture  
The great adaptability and high yields available for maize as a food feed and forage crop have led to its current production on  
over 140 million hectares worldwide with acreage continuing to grow at the expense of other crops In terms of tons of cereal  
grain produced worldwide maize has been number one for many years Moreover maize is expanding its contribution to non  
food uses including as a major source of ethanol as a fuel additive or fuel alternative in the US In addition maize has been at  
the center of the transgenic plant controversy serving as the first food crop with released transgenic varieties By 2008 maize  
will have its genome sequence released providing the sequence of the first average size plant genome the four plant genomes  
that are now sequenced come from unusually tiny genomes and of the most complex genome sequenced from any organism  
Among plant science researchers maize has the second largest and most productive research community trailing only the  
Arabidopsis community in scale and significance At the applied research and commercial improvement levels maize has no  
peers in agriculture and consists of thousands of contributors worthwhile A comprehensive book on the biology of maize has  
not been published The Handbook of Maize the Genetics and Genomics center on the past present and future of maize as a  
model for plant science research and crop improvement The books include brief focused chapters from the foremost maize  
experts and feature a succinct collection of informative images representing the maize germplasm collection *The Plant*
