Narratives Spaces:

Infrastructures of Reality: Metaverse Stories, Spaces, Bodies Chris Hesselbein, Paolo Bory, 2025-08-09 This open access book focuses on two dimensions of the development of the metaverse that are crucial to reality namely spatiality and embodiment Metaversal technologies are thought to fundamentally affect both our spaces and bodies which are two central aspects of the constitution of social reality Both spatiality and embodiment are core elements of world making that are being pulled into the ambit of metaversal projects On the one hand metaversal technologies are profoundly spatial in the sense that they render space in virtual form or overlay digital layers onto pre existing physical spaces On the other hand metaversal technologies are directly geared towards the body in that they not only seek to extend or expand our embodied senses and emplace our bodies in virtual spaces but they also seek to capture their behaviours and actions on a far more granular level This can create new opportunities in terms of work social interaction and leisure but can also open our bodies up to new tech driven interventions and control Whether in the form of VR or AR such technologies not only reproduce space but also rely on making spaces more legible and open to automated interventions Taken together the metaversification of spaces and bodies gives rise to crucial questions about the goals and implications of metaversal developments by large technology companies and about the relationship between the developments of the metaverse and AI systems Drawing on our combined background and expertise in Science and Technology Studies and the History of Media and Communication we critically analyse the development of metaversal technologies and platforms by discussing a broad set of developments and examples from a wide range of technology and gaming companies Written in clear concise and accessible language and combining and applying novel theoretical frameworks and concepts to a currently emergent phenomenon this book will find a large audience not only within academic and professional circles but also in popular culture

The Ontology of Space in Biblical Hebrew

Narrative Luke Gartner-Brereton, 2014-12-18 The central premise of this book is that biblical Hebrew narrative in terms of its structure tends to operate under similar mechanical constraints to those of a stage play wherein space is central characters are fluid and objects within the narrative tend to take on a deep internal significance The smaller episodic narrative units within the Hebrew aesthetic tend to grant primacy to space both ideologically and at the mechanical level of the text itself However space as a determinate structural category has been all but overlooked in the field of biblical studies to date reflecting perhaps our own inability as modern readers to see beyond the dominant cinematic aesthetic of our times The book is divided into two major sections each beginning with a more theoretical approach to the function of narrative space and ending with a practical application of the previous discussion using Genesis 28 10 22 the Bethel narrative and the book of Ruth respectively as test cases

Heimat, Space, Narrative Friederike Ursula Eigler, 2014. Explores how contemporary novels dealing with flight and expulsion after the Second World War unsettle traditional notions of Heimat without abandoning place-based notions of belonging. At the end of the Second World War, millions of Germans and Poles fled or were expelled from the border regions of what had been their countries. This monograph examines how in Cold War and post-Cold War Europe, since the 1970s, writers have responded to memories or postmemories of this traumatic displacement. Friederike Eigler engages with important currents in scholarship on Heimat, the much-debated German concept of homeland, on the spatial turn in literary studies, and on German-Polish relations, arguing for a transnational approach to the legacies of flight and expulsion and for a spatial approach to Heimat. She explores notions of belonging in selected postwar and contemporary German novels with a comparative look at a Polish novel, Olga Tokarczuk's *House of Day, House of Night* (1998). Eigler finds dynamic manifestations of place in Tokarczuk's novel, in Horst Bienek's 1972/82 Gleiwitz tetralogy about the historical border region of Upper Silesia, and in contemporary novels by Reinhard Jirgl, Christoph Hein, Kathrin Schmidt, Tanja Dückers, Olaf Müller, and Sabrina Janesch. In a decisive departure from earlier approaches, Eigler explores how these novels foster an awareness of the region's multiethnic and multinational histories, unsettling traditional notions of Heimat without altogether abandoning place-based notions of belonging. Friederike Eigler is Professor of German at Georgetown University.

Space, Narrative, and Historical Imagination in Livy's Ab Urbe Condita Virginia Fabrizi, 2025-08-07. The surviving books of Livy's *Ab Urbe Condita*, written ca. 30–15 BCE, narrate the origins of Rome, the gradual growth of the city, and its rise to Mediterranean hegemony. This monograph reads Livy's work as, among other things, a narrative about space: the space of the city and the space of the world which Rome strives to conquer and control. Using a narratological approach, it analyses how the text constructs the settings of historical events through an interplay of historical information, literary or conventional elements, and spatial semantics. In this way, it sheds light on Livy's interpretation of politics, empire, conquest, and Roman identity.

Untold Stories in Organizations Michal Izak, Linda Hitchin, David Anderson, 2014-11-13. The field of organizational storytelling research is productive, vibrant, and diverse. Over three decades, we have come to understand how organizations are not only full of stories but also how stories are actively making, sustaining, and changing organizations. This edited collection contributes to this body of work by paying specific attention to stories that are neglected, edited out, unintentionally omitted, or deliberately left silent. Despite the fact that such stories are not voiced, they have a role to play in organizational analysis. The chapters in this volume variously explore how certain realities become excluded or silenced. The stories that remain below the audible range in organizations offer researchers an access to study political practices which marginalise

certain organisational realities whilst promoting others This volume offers a further contribution by paying heed to silence and the processes of silencing These silences influence the choice of issues on organisational agendas the choice of audience s to which these discourses are addressed and the ways of addressing them In exploring these relatively understudied terrains *Untold Stories in Organizations* comprises an important contribution to the organizational storytelling space opening paths for new trajectories in storytelling research

Narrative Space and Time Elana Gomel, 2014-02-18 Space is a central topic in cultural and narrative theory today although in most cases theory assumes Newtonian absolute space However the idea of a universal homogeneous space is now obsolete Black holes multiple dimensions quantum entanglement and spatio temporal distortions of relativity have passed into culture at large This book examines whether narrative can be used to represent these impossible spaces Impossible topologies abound in ancient mythologies from the Australian Aborigines dream time to the multiple layer universe of the Sumerians More recently from Alice s adventures in Wonderland to contemporary science fiction s obsession with black holes and quantum paradoxes counter intuitive spaces are a prominent feature of modern and postmodern narrative With the rise and popularization of science fiction the inventiveness and variety of impossible narrative spaces explodes The author analyses the narrative techniques used to represent such spaces alongside their cultural significance Each chapter connects narrative deformation of space with historical problematic of time and demonstrates the cognitive and perceptual primacy of narrative in representing imagining and apprehending new forms of space and time This book offers a comprehensive analysis of the connection between narratology cultural theory science fiction and studies of place

Storytelling and the Future of Organizations David M. American Dreams, Suburban Nightmares: Suburbia as a Narrative Space between Utopia and Dystopia in Contemporary American Cinema Melanie Smicek, 2014-10 The suburban landscape is inseparable from American culture Suburbia does not only relate to the geographical concept but also describes a cultural space incorporating people s hopes for a safe and prosperous life Suburbia marks a dynamic ideological space constantly influenced and recreated by both the events of everyday life and artistic discourse Fictional texts do not merely represent suburbia but also have a decisive role in the shaping of suburban spaces The widely held idealized image of suburbia evolved in the 1950s Today reality deviates from the concept of suburbs projected back then due to e g high divorce rates and an increase of crime Nevertheless the nostalgic view of the suburbs as the Promised Land has survived Postwar critics object to this perception considering the suburbs rather as depressing landscapes of mass consumption conformity and alienation This book exemplifies the dualistic representation of suburbs in contemporary American cinema by analyzing *Pleasantville* *The Truman Show* and *American Beauty* It examines how utopian concepts of suburbia are created culturally and psychologically

in the films and how the underlying anxieties of the suburban experience visualized by the dystopian narratives challenge this ideal

The Language of Stories Barbara Dancygier, 2011-10-13 How do we read stories How do they engage our minds and create meaning Are they a mental construct a linguistic one or a cultural one What is the difference between real stories and fictional ones This book addresses such questions by describing the conceptual and linguistic underpinnings of narrative interpretation Barbara Dancygier discusses literary texts as linguistic artifacts describing the processes which drive the emergence of literary meaning If a text means something to someone she argues there have to be linguistic phenomena that make it possible Drawing on blending theory and construction grammar the book focuses its linguistic lens on the concepts of the narrator and the story and defines narrative viewpoint in a new way The examples come from a wide spectrum of texts primarily novels and drama by authors such as William Shakespeare Margaret Atwood Philip Roth Dave Eggers Jan Potocki and Mikhail Bulgakov
