emerged as aesthetic objects promoted by a network of galleries collectors and institutions and how this changed the understanding of architecture Prior to the 1970s buildings were commonly understood to be the goal of architectural practice architectural drawings were seen simply as a means to an end But just as the boundaries of architecture itself were shifting at the end of the twentieth century the perception of architectural drawings was also shifting they began to be seen as autonomous objects outside the process of building In Drawing on Architecture Jordan Kauffman offers an account of how architectural drawings promoted by a network of galleries and collectors exhibitions and events emerged as aesthetic objects and ultimately attained status as important cultural and historical artifacts and how this was both emblematic of changes in architecture and a catalyst for these changes Kauffman traces moments of critical importance to the evolution of the

perception of architectural drawings beginning with exhibitions that featured architectural drawings displayed in ways that did not elucidate buildings but treated them as meaningful objects in their own right When architectural drawings were seen as having intrinsic value they became collectible and Kauffman chronicles early collectors galleries and sales He discusses three key exhibitions at the Leo Castelli Gallery in New York other galleries around the world that specialized in architectural drawings the founding of architecture museums that understood and collected drawings as important cultural and historical artifacts and the effect of the new significance of architectural drawings on architecture and architectural history Drawing on interviews with more than forty people directly involved with the events described and on extensive archival research Kauffman shows how architectural drawings became the driving force in architectural debate in an era of change

dimension of reality as well as our personal and inter personal perception and interaction with reality aggravates human separateness at the expense of human connectedness It shows how many urgent societal challenges are affected by an imbalance between spatial and the non spatial aspects and offers an analysis of the impoverishment of society both in spatial terms spatialisation and in informational terms digitalisation Drawing on insights from quantum physics and depth psychology it proposes an unorthodox view of the potential of humans and of reality in itself that was lost in this impoverishment I found this book hugely interesting highly original and very well written I haven't come across these ideas presented in quite this way and so the book could be considered a groundbreaking contribution Dr Stephan Harding Resident Ecologist Schumacher College Author of *Animate Earth* It rarely happens that we are invited by a scholarly text to look at reality in a basically different way than the one we are used to at least in a way that is seductive and compelling at the same time But this is precisely what the text of Pieter Brabers has done with me Dr John Rijsman Emeritus Professor of Social Psychology Tilburg University Pieter Brabers monumental treatise draws our attention to possibly the key problem that underlies all our problems the way we construct reality Brabers opens the way to a better reality construction and understanding this form could highlight even if not necessarily immediately resolve the problems generated by our faulty reality as he calls it I recommend this book to all serious students of the disconnect that marks the fault of the contemporary view of the world Dr Ervin Laszlo author of *The Akasha Paradigm* Pieter Brabers 1944 studied Architecture and worked as a Lecturer at Delft University of Technology the Netherlands He has lived for the last 20 years in the south of Spain *DK Eyewitness Travel Guide: Barcelona & Catalonia* Nick Inman, 2006-03-20 A highly illustrated guide to Barcelona and Catalonia in the award winning DK Eyewitness Travel series **How to Make Things Happen** Beatriz Muñoz-Seca, 2017-08-21 This book offers models and frameworks to analyze your service delivery systems as a whole It presents the framework to solve customer problems by delivering the right knowledge at the right time to the right place and take advantage of the efficiency that technology and algorithms offer Why do so many brilliant plans fail to deliver in practice Why can't your employees just do what you want them to do In most cases because the operations eco system in which those plans must be deployed fails to fully understand the problem that needs to be solved The fourth industrial revolution is seeing advances in Artificial Intelligence industrialize the service sector But despite the cost cutting that these advances offer firms are still struggling to stay competitive That is because they think that cost cutting delivers increased efficiency whereas it is the other way around increased efficiency cuts costs And the heart of efficiency in delivering services is people and their knowledge As industrialization drives ever more standardized offerings and ever little human contact it is in those rare moments of human interaction where the greatest opportunity to add or destroy value lies It is human brains and the knowledge they contain that are best suited to problem solving and individualizing client solutions The real competitive edge will become the ability to foresee and individualize problem solving To do this firms must start thinking of knowledge as inventory who knows what
