

SAFE LIFTING TECHNIQUES

1

Plan the Lift

Is this a solo or team task?
Do I need to clear the path?
Do I need to reduce the load?
Should I use a material handling device?
Are there steps, ledges or other obstacles?
Will I need to stop for rest?

2

Size up the Load

Check the load to see that it is stable and balanced.

Before lifting an object, test the weight of the object by lifting a corner.

If you are unsure of its weight, use a material handling device.

3

Establish a Base

Use a wide stance, with feet about shoulder's width apart, and one foot slightly in front of the other.

This staggered position gives you more stability and reduces the risk of falling.

4

Get a Good Grip

Use your palms to grip the object.

Make sure you have an adequate hold before moving.

5

Lift Steadily

Use your leg strength to lift in a smooth, controlled manner.

Keep your stomach muscles tight and your head and shoulders up.

Avoid jerking and twisting motions.

6

Keep it Close

The closer the load is to your body, the less strain on your back.

7

Move your Feet

Don't twist the trunk; move your feet to turn.
