Explicit and Implicit Prosody in Sentence Processing Lyn Frazier, Edward Gibson, 2015-06-23 Top researchers in prosody and psycholinguistics present their research and their views on the role of prosody in processing speech and also its role in reading The volume characterizes the state of the art in an important area of psycholinguistics How are general constraints on prosody timing and intonation melody used to constrain the parsing and interpretation of spoken language How are they used to assign a default prosody intonation in silent reading and more generally what is the role of phonology in reading Prosody and intonation interact with phonology syntax semantics and pragmatics and thus are at the very core of language processes

New Work on Speech Acts Daniel Fogal, Daniel W. Harris, Matt Moss, 2018-07-04 Speech act theory is the interdisciplinary study of the wide range of things we do with words Originally stemming from the influential work of twentieth century philosophers including J L Austin and Paul Grice recent years have seen a resurgence of work on the topic On one hand a new generation of linguists philosophers and cognitive scientists have made impressive progress toward reverse engineering the psychological underpinnings that allow us to do so much with language Meanwhile speech act theory has been used to enrich our understanding of pressing social issues that include freedom of speech racial slurs and the duplicity of political discourse This volume presents fourteen new essays by many of the philosophers and linguists who have led this resurgence The topics span a methodological range that includes formal semantics and pragmatics foundational issues about the nature of linguistic representation and work on a variety of forms of indirect and or uncooperative speech that occupies the intersection of the philosophy of language ethics and political philosophy Several of the contributions demonstrate the benefits of integrating the methodologies and perspectives of these literatures The essays are framed by a comprehensive introductory survey of the contemporary literature written by the editors

Perspectives on information structure in Austronesian languages Sonja Riesberg, Asako Shiohara, Atsuko Utsumi, 2018 Information structure is a relatively new field to linguistics and has only recently been studied for smaller and less described languages This book is the first of its kind that brings together contributions on information structure in Austronesian languages Current approaches from formal semantics discourse studies and intonational phonology are brought together with language specific and cross linguistic expertise of Austronesian languages The 13 chapters in this volume cover all subgroups of the large Austronesian family including Formosan Central Malayo Polynesian South Halmahera West New Guinea and Oceanic The major focus though lies on Western Malayo Polynesian languages Some chapters investigate two of the largest languages in the region Tagalog and

different varieties of Malay others study information structural phenomena in small underdescribed languages The three overarching topics that are covered in this book are NP marking and reference tracking devices syntactic structures and information structural categories and the interaction of information structure and prosody Various data types build the basis for the different studies compiled in this book Some chapters investigate written texts such as modern novels cf Djenar s chapter on modern standard Indonesian or compare different text genres such as for example oral narratives and translations of biblical narratives cf De Busser s chapter on Bunun Most contributions however study natural spoken speech and make use of spoken corpora which have been compiled by the authors themselves The volume comprises a number of different methods and theoretical frameworks Two chapters make use of the Question Under Discussion approach developed in formal semantics cf the chapters by Latrouite Shiohara Riester Riesberg et al apply the recently developed method of Rapid Prosody Transcription RPT to investigate native speakers perception of prosodic prominences and boundaries in Papuan Malay Other papers discuss theoretical consequences of their findings Thus for example Himmelmann takes apart the most widespread framework for intonational phonology ToBI and argues that the analysis of Indonesian languages requires much simpler assumptions than the ones underlying the standard model Arka Sedeng ask the question how fine grained information structure space should be conceptualized and modelled e g in LFG Schnell argues that elements that could be analysed as topic and focus categories should better be described in terms of packaging and do not necessarily reflect any pragmatic roles in the first place

The Oxford Handbook of Information Structure Caroline Féry, Shinichiro Ishihara, 2016-08-25 This book provides linguists with a clear critical and comprehensive overview of theoretical and experimental work on information structure Leading researchers survey the main theories of information structure in syntax phonology and semantics as well as perspectives from psycholinguistics and other relevant fields Following the editors introduction the book is divided into four parts The first on theories of and theoretical perspectives on information structure includes chapters on focus topic and givenness Part 2 covers a range of current issues in the field including quantification dislocation and intonation while Part 3 is concerned with experimental approaches to information structure including language processing and acquisition The final part contains a series of linguistic case studies drawn from a wide variety of the world s language families This volume will be the standard guide to current work in information structure and a major point of departure for future research
