*The Other Arms Race* Geoffrey Kemp,1975      START and the Future of Deterrence Michael J. Mazarr,1990-06-18  
Examining the future of nuclear deterrence in the 1990s and beyond this book outlines aspects of the evolving strategic environment It also projects the likely future of deterrence strategies and strategic force postures Other topics such as the Soviet nuclear doctrine are also covered      **Technology and Terrorism** Paul Wilkinson,2012-12-06 This volume will be of interest to all students of terrorism policymakers and security practitioners involved in combating terrorism from government officials law enforcement military and intelligence agencies to specialists in industrial security including the aviation and nuclear power sectors      **Limited War Revisited** Robert E. Osgood,2019-03-08 The strategy of limited war has transformed the American approach to the use of force and played a key role in U S foreign policy since World War II As the mainstay of containment it was designed to deter and fight wars effectively at a tolerable cost and risk in the nuclear age by providing the United States with a flexible and controlled response to a variety of military threats The strategy met a severe challenge in the Vietnam war it has nevertheless continued to prevail as a doctrine if not necessarily with its former utility by adapting to the changing domestic and international environment after Vietnam Robert E Osgood critically examines the success ambiguities and flaws of the strategy in its expanding application to postwar military policy He interprets its impact on the Vietnam war and vice versa extends his analysis to the new challenges posed by changes in technology and the military balance that affect U S security and concludes with a searching inquiry into the problems of limited war where its utility as an instrument of foreign policy is now most in doubt the Third World      **Tooling for War** Elwood L. White,1994      **American Military Technology** Barton C. Hacker,Margaret Vining,2007-11-29 The growth of American engineering and science has affected military technology organization and practice from the colonial era to the present day even as military concerns have influenced and often funded domestic engineering programs and scientific development American Military Technology traces the interplay of technology and science with the armed forces of the United States in terms of what Hacker and Vining view as epochs 1840 1865 the introduction of modern small arms steam power and technology science and medicine 1900 1914 the naval arms race torpedoes and submarines and the signal corps and the airplane and 1965 1971 McNamara s Pentagon technology in Vietnam guided missiles and smart bombs The book is an excellent springboard for understanding the complex relationship of science technology and war in American history  
The Politics of Nuclear Consultation in NATO 1965-1980 Paul Buteux,2011-07-21 This important study contributes to the understanding of the issues and policies of the nuclear arms control questions      **Review of Current Military Literature** ,1989      **Professional Journal of the United States Army** ,1989      Quarterly Review of Military Literature ,1976  
Aerospace power : the case for indivisible application Grover E. Myers,1986 Air power doctrine is comprised of both a formal literature such as the Army s Field Manual 100 20 Command and Employment of Air Power published during World

War II or today's Air Force Manual 1-1 Basic Aerospace Doctrine of the United States Air Force and an informal and uncodified set of doctrinal perceptions that although they are not in the official literature affect the way our military forces do business. This second category, the unofficial doctrine, represents a sort of corporate consensus of how we really do business and is generally based on a combination of real world observations and political necessity. This study addressed just such an unofficial doctrine. A persistent legacy of the World War II era of strategic bombardment and the postwar requirement for nuclear deterrence is the association of long range combat aircraft bombers with the strategic nuclear mission and conversely the assumption that the far more likely nonnuclear conflicts will be handled by the tactical elements of our aerospace forces, our fighters. This study offers a serious alternative to this aerospace folklore. The proposals put forth here are based on the indivisible air power concept which suggests that strategic and tactical classifications are purely transitory and depend on how a weapon is used, not on its size, speed, range, payload, employment medium, space or air or service or command affiliation. The doctrinal framework presented in this study, if applied to all our aerospace systems, should result in a far more flexible aerospace force structure, one that gets the most from our increasingly expensive and limited assets. More important, it should improve our ability to rapidly respond to global crisis and conflict and to apply the appropriate level of force at the right place and the right time.

**Other People's Wars** Brent L. Sterling, 2021-03-01 Other People's Wars explores key US efforts involving direct observation missions and post conflict investigations throughout its history. Sterling shows how initiatives to learn from other nations' wars can yield significant benefits, emphasizing comprehensive qualitative learning to foster better military preparedness and adaptability.

**Defense Manpower Planning** William J. Taylor, Eric T. Olson, Richard A. Schrader, 2013-10-22 Defense Manpower Planning discusses the important set of national security issues related to defense manpower for the 1980s. The topics in the text focus on the problems of manpower acquisition and retention. The historical background and description of the military power during the 1970s and 1980s are given in detail. A military manpower chronology is provided. The book enumerates some of the manpower issues and debates. Such salient issues as the quantity, quality, socio-economic factors, and the issue of cost, combat effectiveness, and readiness factors are carefully considered. After listing the issues, solutions are then presented. The variants of the all-volunteer force, of conscription, and of combining volunteers and conscripts are suggested. A part of the book focuses on active duty forces. The issue of employing women in the military is fully addressed. A description of combat is also tackled. A section of the text explains the relationship between precision-guided munitions and the volunteer force. The book will provide useful information to defense military planners, historians, and students of history.

Sechser,Neil Narang,Caitlin Talmadge,2021-11-28 Technology has always played a central role in international politics it shapes the ways states fight during wartime and compete during peacetime Today rapid advancements have contributed to a widespread sense that the world is again on the precipice of a new technological era Emerging technologies have inspired much speculative commentary but academic scholarship can improve the discussion with disciplined theory building and rigorous empirics This book aims to contribute to the debate by exploring the role of technology both military and non military in shaping international security Specifically the contributors to this edited volume aim to generate new theoretical insights into the relationship between technology and strategic stability test them with sound empirical methods and derive their implications for the coming technological age This book is very novel in its approach It covers a wide range of technologies both old and new rather than emphasizing a single technology Furthermore this volume looks at how new technologies might affect the broader dynamics of the international system rather than limiting the focus to a stability The contributions to this volume walk readers through the likely effects of emerging technologies at each phase of the conflict process The chapters begin with competition in peacetime move to deterrence and coercion and then explore the dynamics of crises the outbreak of conflict and war escalation in an environment of emerging technologies The chapters in this book except for the Introduction and the Conclusion were originally published in the Journal of Strategic Studies **Military Development In Africa** Bruce E. Arlinghaus,2019-03-04 Increases in the number and improvements in the quality of arms transferred to sub Saharan African nations clearly will affect those nations economic development and political stability both

immediately and in the long term Problems of technology absorption manpower development and the diversion of financial and human resources occasioned by such transfers become more and more critical as the demand for military modernization by African governments grows and the industrial nations compete to meet the demand Dr Arlinghaus evaluates conflicting assessments of the costs and benefits of military development from the perspective that it would be best for African nations to allocate resources for defense on the basis of socioeconomic considerations as well as their military and political goals
