Otto Neurath Philosophy Between Science And Politics:

Otto Neurath Nancy Cartwright, Jordi Cat, Lola Fleck, Thomas E. Uebel, 1996-02-01 Four distinguished authors have been brought together to produce this elegant study of a much neglected figure The book is divided into three sections Neurath's biographical background and the economic and social context of his ideas his theory of science and the development of his role in debates on Marxist concepts of history and his own conception of science Coinciding with the emerging serious interest in logical positivism this timely publication will redress a current imbalance in the history and philosophy of science

Otto Neurath's Economics in Context Elisabeth Nemeth, Stefan W. Schmitz, Thomas E. Uebel, 2008-05-22 Otto Neurath 1882-1945 was a highly unorthodox thinker both in philosophy and economics He proposed a radically expanded scope of economic analysis that would facilitate a comparative and systematic study of the impact of a great variety of economic and political measures on a population's well-being Neurath regarded the controversial and widely misunderstood concept of calculation in kind as an indispensable instrument for anyone economist or politician who sought to analyze economic relationships from a wider perspective than that of price formation under market conditions What is the impact of alternative economic political or organisational measures on living conditions What are the appropriate methods to compare and to rationally choose among alternative measures In Neurath's opinion answers to these questions are crucial for every democratic government The contributions to this sparkling new book conclude that Neurath touched on many of the most critical problems of economic theory during its formative years as a modern discipline his economics provides insights into the foundational problems of modern economics and should encourage contemporary economic theorists to critically reflect their own hidden presumptions Neurath's arguments continue to challenge the foundations of today's neo-liberal approach to political economy They have also been rediscovered by researchers in the fields of ecological economics and of sustainable development as visionary and original His comprehensive theory of life conditions and life quality anticipated the questions development economists and the general public meet today *Epistemology and Political Thought in Interwar Germany and Austria (1914 - 1945)* Michael Dylan Rogers, 2025-09-08 This book offers a new perspective on the emergence of concepts that shaped the world set against the dramatic background of political upheaval and crisis of scientific knowledge that characterized interwar Germany and Austria On the one hand the political theoretical certainties of previous generations were rendered suddenly obsolete by the imperatives of total war On the other hand the old certainties of a reductive and

deterministic conception of scientific knowledge had likewise been destabilized in this case by the revolutionary discoveries of Relativity Theory and Quantum Mechanics Among the philosophically literate intelligentsia of interwar Germany and Austria the juxtaposition of such radical epistemic and political insecurity created fertile ground for the cross pollination of ideas across disciplines Using a network oriented approach this book traces key lines of influence following the development dissemination and reinterpretation of concepts from domains of political thought to epistemology and back again It is of interest and importance to a broad range of readers interested in learning how the ideas of physicist philosophers like Albert Einstein and Werner Heisenberg shaped the paradigms within which major theorists like Walter Benjamin and Carl Schmitt opened up new horizons for political thought

Levels of Organization in the Biological Sciences Daniel S. Brooks, James DiFrisco, William C. Wimsatt, 2021-08-24 Scientific philosophers examine the nature and significance of levels of organization a core structural principle in the biological sciences This volume examines the idea of levels of organization as a distinct object of investigation considering its merits as a core organizational principle for the scientific image of the natural world It approaches levels of organization roughly the idea that the natural world is segregated into part whole relationships of increasing spatiotemporal scale and complexity in terms of its roles in scientific reasoning as a dynamic open ended idea capable of performing multiple overlapping functions in distinct empirical settings The contributors scientific philosophers with longstanding ties to the biological sciences discuss topics including the philosophical and scientific contexts for an inquiry into levels whether the concept can actually deliver on its organizational promises the role of levels in the development and evolution of complex systems conditional independence and downward causation and the extension of the concept into the sociocultural realm Taken together the contributions embrace the diverse usages of the term as aspects of the big picture of levels of organization Contributors Jan Baedke Robert W Batterman Daniel S Brooks James DiFrisco Markus I Eronen Carl Gillett Sara Green James Griesemer Alan C Love Angela Potochnik Thomas Reydon Ilya T mkin Jon Umerez William C Wimsatt James Woodward

Natural Kinds and Classification in Scientific Practice Catherine Kendig, 2015-12-22 This edited

volume of 13 new essays aims to turn past discussions of natural kinds on their head. Instead of presenting a metaphysical view of kinds based largely on an unempirical vantage point, it pursues questions of kindness which take the use of kinds and activities of kinding in practice as significant in the articulation of them as kinds. The book brings philosophical study of current and historical episodes and case studies from various scientific disciplines to bear on natural kinds as traditionally conceived of within metaphysics. Focusing on these practices reveals the different knowledge-producing activities of kinding and processes involved in natural kind use, generation and discovery. Specialists in their field, the esteemed group of contributors use diverse empirically responsive approaches to explore the nature of kindhood. This groundbreaking volume presents detailed case studies that exemplify kinding in use. Newly written for this volume, each chapter engages with the activities of kinding across a variety of disciplines. Chapter topics include the nature of kinds, kindhood, kinding and kind making in linguistics, chemical classification, neuroscience, gene and protein classification, colour theory in applied mathematics, homology in comparative biology, sex and gender identity theory, memory research, race, extended cognition, symbolic algebra, cartography and geographic information science. The volume seeks to open up an as yet unexplored area within the emerging field of philosophy of science in practice and constitutes a valuable addition to the disciplines of philosophy and history of science, technology, engineering and mathematics.

European Modernism and the Information Society W. Boyd Rayward, 2017-05-15. Uniting a team of international and interdisciplinary scholars, this volume considers the views of early twentieth-century European thinkers on the creation, dissemination and management of publicly available information. Interdisciplinary in perspective, the volume reflects the nature of the thinkers discussed, including Otto Neurath, Patrick Geddes, the English Fabians, Paul Otlet, Wilhelm Ostwald and H. G. Wells. The work also charts the interest since the latter part of the nineteenth century in finding new ways to think about and to manage the growing body of available information in order to achieve aims such as the advancement of Western civilization, the alleviation of inequalities across classes and countries and the promotion of peaceful coexistence between nations. In doing so, the contributors provide a novel historical context for assessing widely held assumptions about today's globalized post-modern information society. This volume will interest all who are curious about the creation of a modern networked information society.

The Routledge Handbook of Logical Empiricism Thomas Uebel, Christoph Limbeck-Lilienau, 2021-12-27. Logical empiricism is a philosophical movement that flourished in the 1920s and 30s in Central Europe and in the 1940s and 50s in the United States. With its stated ambition to comprehend the revolutionary advances in the empirical and formal sciences of their day and to confront anti-modernist challenges to scientific reason itself, logical empiricism was never uncontroversial. Uniting key thinkers who often disagreed with one another but shared the aim to conceive of philosophy as part of the scientific enterprise, it left a rich and varied legacy that has only begun to be explored relatively recently. *The Routledge Handbook of Logical Empiricism* is an outstanding reference source to this challenging subject area and the first collection of its kind. Comprising 41 chapters,

written by an international and interdisciplinary team of contributors the Handbook is organized into four clear parts The Cultural Scientific and Philosophical Context and the Development of Logical Empiricism Characteristic Theses of and Specific Issues in Logical Empiricism Relations to Philosophical Contemporaries Leading Post Positivist Criticisms and Legacy Essential reading for students and researchers in the history of twentieth century philosophy especially the history of analytical philosophy and the history of philosophy of science the Handbook will also be of interest to those working in related areas of philosophy influenced by this important movement including metaphysics and epistemology philosophy of mind and philosophy of language *The Cambridge Companion to Logical Empiricism* Alan Richardson, Thomas

Uebel, 2007-09-03 If there is a movement or school that epitomizes analytic philosophy in the middle of the twentieth century it is logical empiricism Logical empiricists created a scientifically and technically informed philosophy of science established mathematical logic as a topic in and tool for philosophy and initiated the project of formal semantics Accounts of analytic philosophy written in the middle of the twentieth century gave logical empiricism a central place in the project The second wave of interpretative accounts was constructed to show how philosophy should progress or had progressed beyond logical empiricism The essays survey the formative stages of logical empiricism in central Europe and its acculturation in North America discussing its main topics and achievements and failures in different areas of philosophy of science and assessing its influence on philosophy past present and future *In Defense of Doctrine* Rhyne R. Putman, 2015-06-01 In Defense of

Doctrine is an apologetic for the ongoing constructive theological task in Protestant and Evangelical traditions It suggests that doctrinal development can be explained as a hermeneutical phenomenon and that insights from hermeneutical philosophy and the philosophy of language can aid theologians in constructing explanatory theses for particular theological problems associated with the facts of doctrinal development Joining the recent call to theological interpretation of Scripture Putman provides a constructive model that forwards a descriptive and normative pattern for reading Scripture and theological tradition together Dispositions and Causal Powers Bruno Gnanassounou, 2016-05-23 Dispositions are

everywhere We say that a wall is hard that water quenches thirst and is transparent that dogs can swim and oak trees can let their leaves fall and that acid has the power to corrode metals All these statements express attributions of dispositions be they physical physiological or psychological yet there is much philosophical debate about how far if at all dispositional predicates can have complete meaning or figure in causal explanations This collection of essays by leading international researchers examine the case for realism with respect to dispositions and causal powers in both metaphysics and science Among the issues debated in this book is whether dispositions can be analyzed in terms of conditionals whether all dispositions have a so called categorical basis and if they do what is the relation between the disposition and its basis

Scientific Pluralism Stephen H. Kellert, Helen E. Longino, C. Kenneth Waters, 2006 Scientific pluralism is an issue at the forefront of philosophy of science This landmark work addresses the question Can pluralism be advanced as a general

philosophical interpretation of science Scientific Pluralism demonstrates the viability of the view that some phenomena require multiple accounts Pluralists observe that scientists present various sometimes even incompatible models of the world and argue that this is due to the complexity of the world and representational limitations Including investigations in biology physics economics psychology and mathematics this work provides an empirical basis for a consistent stance on pluralism and makes the case that it should change the ways that philosophers historians and social scientists analyze scientific knowledge Contributors John Bell U of Western Ontario Michael Dickson U of South Carolina Carla Fehr Iowa State U Ronald N Giere U of Minnesota Geoffrey Hellman U of Minnesota Alan Richardson U of British Columbia C Wade Savage U of Minnesota Esther Mirjam Sent U of Nijmegen Stephen H Kellert is professor of philosophy at Hamline University and a fellow of the Minnesota Center for Philosophy of Science Helen E Longino is professor of philosophy at Stanford University C Kenneth Waters is associate professor of philosophy and director of the Minnesota Center for Philosophy of Science

For and Against Method Imre Lakatos, Paul Feyerabend, 2010-05-27 The work that helped to determine Paul Feyerabend's fame and notoriety Against Method stemmed from Imre Lakatos's challenge In 1970 Imre cornered me at a party Paul he said you have such strange ideas Why don't you write them down I shall write a reply we publish the whole thing and I promise you we shall have a lot of fun Although Lakatos died before he could write his reply For and Against Method reconstructs his original counter arguments from lectures and correspondence previously unpublished in English allowing us to enjoy the fun two of this century's most eminent philosophers had matching their wits and ideas on the subject of the scientific method For and Against Method opens with an imaginary dialogue between Lakatos and Feyerabend which Matteo Motterlini has constructed based on their published works to synthesize their positions and arguments Part one presents the transcripts of the last lectures on method that Lakatos delivered Part two Feyerabend's response consists of a previously published essay on anarchism which began the attack on Lakatos's position that Feyerabend later continued in Against Method The third and longest section consists of the correspondence Lakatos and Feyerabend exchanged on method and many other issues and ideas as well as the events of their daily lives between 1968 and Lakatos's death in 1974 The delight Lakatos and Feyerabend took in philosophical debate and the relish with which they sparred come to life again in For and Against Method making it essential and lively reading for anyone interested in these two fascinating and controversial thinkers and their immense contributions to philosophy of science The writings in this volume are of considerable intellectual importance and will be of great interest to anyone concerned with the development of the philosophical views of Lakatos and Feyerabend or indeed with the development of philosophy of science in general during this crucial period Donald Gillies British Journal for the Philosophy of Science on the Italian edition A stimulating exchange of letters between two philosophical entertainers Tariq Ali The Independent Imre Lakatos 1922-1974 was professor of logic at the London School of Economics He was the author of Proofs and Refutations and the two volume Philosophical Papers Paul Feyerabend 1924-1994 was educated in Europe and

held numerous teaching posts throughout his career Among his books are *Against Method* *Science in a Free Society* *Farewell to Reason* and *Killing Time* The Autobiography of Paul Feyerabend the last published by the University of Chicago Press

Critical Appraisal of Physical Science as a Human Enterprise Mansoor Niaz, 2009-02-07 It is generally believed that doing science means accumulating empirical data with no or little reference to the interpretation of the data based on the scientific method or presuppositions Holton 1969a has deplored the widely accepted myth of experimentalism according to which progress in science is presented as the inexorable result of the pursuit of logically sound conclusions from unambiguous experimental data Surprisingly some of the leading scientists themselves Millikan is a good example have contributed to perpetuate the myth with respect to modern science being essentially empirical that is carefully tested experimental facts free of a priori conceptions leading to inductive generalizations Based on the existing knowledge in a field of research a scientist formulates the guiding assumptions Laudan et al 1988 presuppositions Holton 1978 1998 and hardcore Lakatos 1970 of the research program that constitutes the imperative of presuppositions which is not abandoned in the face of anomalous data Laudan and his group consider the following paraphrase of Kant by Lakatos as an important guideline philosophy of science without history of science is empty Starting in the 1960s this historical school has attempted to redraw and replace the positivist or logical empiricist image of science that dominated for the first half of the twentieth century Among other aspects one that looms large in these studies is that of guiding assumptions and has considerable implications for the main thesis of this monograph Chapter 2
