up to the mesosphere and lower thermosphere They contribute significantly to atmospheric physics and chemistry as well as climate change research SCIAMACHY is one of the major current Earth Observation undertakings of Germany The Netherlands and Belgium accomplished in cooperation with the European Space Agency ESA Many scientific groups at various institutes in Europe and abroad were and are actively involved in the analysis of the data This book is a comprehensive summary describing the entire SCIAMACHY mission from the very first ideas to the current results It illustrates how the measurements are performed how the trace gas concentrations are derived from the measured spectra and how the unique data sets are used to improve our understanding of the changing Earth s atmosphere The targeted readership is not only the existing and potentially new SCIAMACHY data users from undergraduate student level up to researchers new in the fields of atmospheric chemistry and remote sensing but anyone who is keen to learn about SCIAMACHY s efforts to study the atmosphere and its responses to both natural phenomena and anthropogenic effects
