## **Our Living Earth An Exploration In Three Dimensions:**

Our Living Earth Gillian Osband, Richard Clifton-Dey, 1987      **The Publishers Weekly**, 1987      The Creation Edward O. Wilson, 2006 The Creation is a timely book about the survival of life on this planet which E O Wilson demonstrates is more endangered than ever before Drawing on his own personal experiences as a world leading biologist he prophesies that at least half the species of plants and animals on Earth could either be gone or fated for early extinction by the end of our present century Written in the form of an impassioned letter to a Southern Baptist pastor The Creation demonstrates that science and religion need not be warring antagonists **BOOK JACKET**      *Earth, Our Living Planet* Philippe Bertrand, Louis Legendre, 2021-04-21 Earth is to our knowledge the only life bearing body in the Solar System This extraordinary characteristic dates back almost 4 billion years How to explain that Earth is teeming with organisms and that this has lasted for so long What makes Earth different from its sister planets Mars and Venus The habitability of a planet is its capacity to allow the emergence of organisms What astronomical and geological conditions concurred to make Earth habitable 4 billion years ago and how has it remained habitable since What have been the respective roles of non biological and biological characteristics in maintaining the habitability of Earth This unique book answers the above questions by considering the roles of organisms and ecosystems in the Earth System which is made of the non living and living components of the planet Organisms have progressively occupied all the habitats of the planet diversifying into countless life forms and developing enormous biomasses over the past 3.6 billion years In this way organisms and ecosystems took over the Earth System and thus became major agents in its regulation and global evolution There was co evolution of the different components of the Earth System leading to a number of feedback mechanisms that regulated long term Earth conditions For millennia and especially since the Industrial Revolution nearly 300 years ago humans have gradually transformed the Earth System Technological developments combined with the large increase in human population have led in recent decades to major changes in the Earth's climate soils biodiversity and quality of air and water After some successes in the 20th century at preventing internationally environmental disasters human societies are now facing major challenges arising from climate change Some of these challenges are short term and others concern the thousand year evolution of the Earth's climate Humans should become the stewards of Earth      **The Creation: An Appeal to Save Life on Earth** Edward O. Wilson, 2010-11-29 The book that launched a movement Wilson speaks with a humane eloquence which calls to us all Oliver Sacks Called one of the greatest men alive by The Times of London E O Wilson proposes an historic partnership between scientists and religious leaders to preserve Earth's rapidly vanishing biodiversity      **Pop-up and Movable Books** Ann Rothwell Montanaro, 1993 For historians of printing and book design students of children's literature and book collectors this record of 19th and 20th century English language books containing movable illustrations identifies indexes and describes some 1 600 titles The volume is arranged alphabetically by title and has three separate indexes sorted by publication date
