## **Punctuation A Programmed Approach:**

*Punctuation* W. E. Perkins, 1972      *A Structured Programming Approach to Data* COLEMAN, 2012-12-06 Much of current programming practice is basically empirical and ad hoc in approach Each problem is tackled without relation to those that have gone before experiences are made and stored as a series of fragments Now under the pressure of events this unsatisfactory state of affairs is coming to an end Programming is becoming a technology a theory known as structured programming is developing The purpose of a theory is to categorise and explain existing practice thus enabling it to be improved through the development of new and sharper techniques The resulting experiences have then to be fed back into the theory so that the process of enrichment may continue This dialectical relationship between theory and practice is essential to a healthy programming technology The lack of such a relationship in the 1950s and 60s and the accompanying software crisis certainly confirm the converse of this proposition My aim in writing this book has been to explain the current state of the theory of structured programming so that it may be used to improve the reader s practice The book deals with two facets of programming how to design a program in terms of abstract data structures and how to represent the data structures on real and bounded computers The separation between program design and data structure representation leads to more reliable and flexible programs      **Programmed Learning and Individually Paced Instruction** Carl H.
