Science Framework for California Public Schools, Kindergarten Through Grade Twelve California. State Board of Education, California. Science Curriculum Framework and Criteria Committee, 1990 This science framework is about connections Each section draws on and contributes to those that precede and follow it The framework opens with a discussion of the nature of science and the need for science educators to model the attributes of scientific investigation including objectivity testability and consistency The framework also calls for a thematic presentation of science concepts so that students appreciate the connections across science disciplines and learn how science relates to other subjects Three chapters address the content of science The repeated use of sidebars helps teachers appreciate the connections among the sciences The final part of the framework demonstrates how science education might be implemented in the 1990 s There are specific recommendations for the teaching of science and the restructuring of science education at the elementary middle and high school levels There are also suggestions for attracting into science classes students who historically have been underrepresented in those classes Finally the framework closes with ideas on how other facets of the system including staff development assessment and especially instructional materials need to be changed to help all students achieve scientific literacy Appendices include 1 Significant Court Decisions Regarding Evolution Creation Issues 2 Education Code Sections of Special Relevance to Science Educators and a list of 33 selected references CW SCIENTIFIC ATTITUDE, SCIENCE INTEREST AND ACHIEVEMENT IN SCIENCE OF SECONDARY SCHOOL STUDENTS Dr. Yendluri Chakradhara Singh, Science has revolutionised the face of the earth with its too many wonderful inventions and discoveries When seen in depth science touches all of us and our life at every step Science influenced the life of even the most primitive human being who thought of safety from the poisonous berry and who stored up some initial ideas about inventing how to make fire building a hut sharpening a spear and fishing in the waters This accumulation of experience distinguishes man from animal which has to rely on instinct Our life is completely dependent on science and its fruits surround us on all sides The process of applying science to the needs of the living has moved quickly to a great extent **What Girls Say About Their Science Education Experiences** Michael Papadimitriou, 2004-07-13 What Girls Say About Their Science Education Experiences describes the

science education experiences of 12 young ladies enrolled in advanced science courses in a Southeast Texas High School. What Girls Say includes profiles of each girl and topical chapters dealing with generalizations about the key elements of experience that the girls illuminated. Also a detailed review of the current literature related to girls and science is provided. The strength of the text lies in the use of the participants' words to describe their own experiences. Unfortunately, despite over 30 years of research related to gender and science education, females still are underrepresented in some upper level high school science courses, particular college science curricula and majors and many scientific careers. While boys and girls enter school with equal ability, girls are marginalized in science and math to the point that they trail males in science interest and participation by graduation time. However, such differences have decreased. While attitudes, achievement levels and the other components of the science education experience have been quantitatively examined, very little qualitative analysis exists to describe the educational experience of females in American high school classrooms from the perspective of the student. A description of this phenomenon as constructed through the experiences of female students represents a worthy pursuit. This book represents an attempt to describe this phenomenon as constructed through the experiences of female students. Very simply, the purpose of this book was to describe the essential elements of the current science education experience as constructed by female physics and advanced chemistry students. The construct of science education experience for females included perceived affective attitudes, b achievement and success, c ability, d cultural factors, e social psychological factors, f interpersonal factors and g instructional teacher factors. All of these topics are addressed in *What Girls Say About Their Science Education Experiences*. *America's Lab Report*, National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Board on Science Education, Committee on High School Laboratories: Role and Vision, 2005-12-20. Laboratory experiences as a part of most U.S. high school science curricula have been taken for granted for decades but they have rarely been carefully examined. What do they contribute to science learning? What can they contribute to science learning? What is the current status of labs in our nation's high schools as a context for learning science? This book looks at a range of questions about how laboratory experiences fit into U.S. high schools. What is effective laboratory teaching? What does research tell us about learning in high school science labs? How should student learning in laboratory experiences be assessed? Do all students have access to laboratory experiences? What changes need to be made to improve laboratory experiences for high school students? How can school organization contribute to effective laboratory teaching? With increased attention to the U.S. education system and student outcomes, no part of the high school curriculum should escape scrutiny. This timely book investigates factors that influence a high school laboratory experience, looking closely at what currently takes place and what the goals of those experiences are and should be. Science educators, school administrators, policy makers and parents will all benefit from a better understanding of the need for laboratory experiences to be an integral part of the science curriculum and how that can be accomplished.
