Murphy, 1971 Building Common Interests in the Arctic Ocean with Global Inclusion Paul Arthur Berkman, Alexander N. Vylegzhanin, Oran R. Young, David A. Balton, Ole Rasmus Øvretveit, 2022-05-07 This book contains an inclusive compilation of perspectives about the Arctic Ocean with contributions that extend from Indigenous residents and early career scientists to Foreign Ministers involving perspectives across the spectrum of subnational national international jurisdictions The Arctic

Ocean is being transformed with global climate warming into a seasonally ice free sea creating challenges as well as opportunities that operate short to long term underscoring the necessity to make informed decisions across a continuum of urgencies from security to sustainability time scales The Arctic Ocean offers a case study with lessons that are especially profound at this moment when humankind is exposed to a pandemic awakening a common interest in survival across our globally interconnected civilization unlike any period since the Second World War This second volume in the Informed Decisionmaking for Sustainability series reveals that building global inclusion involves common interests to address changes effectively for the benefit of all on Earth across generations

Towards Rethinking Politics, Policy and Polity in the Anthropocene Hans Günter Brauch, 2025-02-24 Humankind faces two anthropogenic threats to its survival that are closely linked The first is the end of the Holocene and the start of the Anthropocene which was marked by the test of a nuclear bomb on 16 July 1945 In the prevailing peace and security narrative nuclear weapons and the other country bloc or alliance pose a perceived threat to humankind s survival In the Anthropocene narrative we are the threat through our way of life and the burning of fossil fuels The start of the Anthropocene coincides with a change in the international order with the setting up of the UN and the Bretton Woods Institutions Three stages of this order are distinguished the Cold War bipolarity the post Cold War era unipolarity and the end of the rule based global liberal order multipolarity on 24 February 2022 In this book ten multidisciplinary perspectives discuss complexity Anthropocene geopolitics peace and security discourses and the debate on the Anthropocene planetary boundaries complex crises and integrative geography in the Anthropocene governance and

politics and the Patriacene and gender Both existential threats for humankind are illustrated by cover photos of the first nuclear weapons test on 16 July 1945 and by Category 5 Hurricane Otis an extreme weather event impacting on Acapulco in Mexico on 25 October 2023 The Anthropocene as a new epoch of Earth history coincides in 1945 with a change in the international order In the security and peace narrative the other and nuclear weapons pose an existential threat in the Anthropocene narrative This dual existential change requires a rethinking of politics policy and polity In the social sciences the Anthropocene is being discussed from multidisciplinary perspectives geography political science and peace security and gender studies This is an open access publication Legacies and Change in Polar Sciences Jessica M. Shadian, Monica Tennberg, 2016-04-22 Providing case study analyses of the politics of science in and around the International Polar Year of 2007 2008 this volume makes a distinct contribution to ongoing research focusing on the relationship between science international politics law and history The contributors combine both interdisciplinary and multi theoretical approaches to engage directly with the most recent debates in international relations scholarship to include discussions of arctic climate change governance issues reflections on the Antarctic Treaty and the science geopolitics interface amongst others This is the first comprehensive account to look explicitly at the relationship between global politics and science through an account of the International Polar Years *Handbook on the Politics of Higher Education* Brendan Cantwell, Hamish Coate, Roger King, 2018 Understanding the politics of Higher Education is becoming more important as the sector is increasingly recognised as a vital source of innovation skills economic prosperity and personal wellbeing Yet key political differences remain over such issues as who should pay for higher education how should it be accountable and how we measure its quality and productivity Particularly are states or markets the key in helping to address such matters The Handbook provides framing perspectives and perspectives chapters on funding governance and regulation and pieces on the political economy of higher education and on the increased role of external stakeholders and indicators **Great Powers and Geopolitical Change** Jakub J. Grygiel, 2007-02-01 Named by Foreign Affairs as a book to read on geopolitics In an era of high technology and instant communication the role of geography in the formation of strategy and politics in international relations can be undervalued But the mountains of Afghanistan and the scorching sand storms of Iraq have provided stark reminders that geographical realities continue to have a profound impact on the success of military campaigns Here political scientist Jakub J Grygiel brings to light the importance of incorporating geography into grand strategy He argues that states can increase and maintain their position of power by pursuing a geostrategy that focuses on control of resources and lines of communication Grygiel examines case studies of Venice the Ottoman Empire and China in the global fifteenth century all great powers that faced a dramatic change in geopolitics when new routes and continents were discovered The location of resources the layout of trade networks and the stability of state boundaries played a large role in the success or failure of these three powers Grygiel asserts that though many other aspects of foreign policy have changed throughout history

strategic response to geographical features remains one of the most salient factors in establishing and maintaining power in the international arena

Last War of the World-Island: The Geopolitics of Contemporary Russia Alexander Dugin, 2015-05-26 Alexander Dugin traces the geopolitical development of Russia from its origins in Kievan Rus and the Russian Empire through the peak of its global influence during the Soviet era and finally to the current presidency of Vladimir Putin Dugin sees Russia as the primary geopolitical pole of the land based civilizations of the world forever destined to be in conflict with the sea based civilizations At one time the pole of the seafaring civilizations was the British Empire today it is represented by the United States and its NATO allies Russia can only fulfill its geopolitical mission by remaining in opposition to the sea powers Today according to Dugin this conflict is not only geopolitical in scope but also ideological Russia is the primary representative and defender of traditional values and idealism whereas the West stands for the values of liberalism and the market driven society Whereas Russia began to lose sight of its mission during the 1990s and threatened to succumb to domination by the Western powers Dugin believes that Putin has begun to correct its course and return Russia to her proper place But the struggle is far from over while progress has been made Russia remains torn between its traditional nature and the temptations of globalism and Westernization and its enemies undermine it at every turn Dugin makes the case that it is only by remaining true to the Eurasian path that Russia can survive and flourish in any genuine sense otherwise it will be reduced to a servile and secondary place in the world and the forces of liberalism will dominate the world unopposed

Savage Ecology Jairus Victor Grove, 2019-08-16 Jairus Victor Grove contends that we live in a world made by war In *Savage Ecology* he offers an ecological theory of geopolitics that argues that contemporary global crises are better understood when considered within the larger history of international politics Infusing international relations with the theoretical interventions of fields ranging from new materialism to political theory Grove shows how political violence is the principal force behind climate change mass extinction slavery genocide extractive capitalism and other catastrophes Grove analyzes a variety of subjects from improvised explosive devices and drones to artificial intelligence and brain science to outline how geopolitics is the violent pursuit of a way of living that comes at the expense of others Pointing out that much of the damage being done to the earth and its inhabitants stems from colonialism Grove suggests that the Anthropocene may be better described by the term Eurocene The key to changing the planet's trajectory Grove proposes begins by acknowledging both the earth shaping force of geopolitical violence and the demands apocalypses make for fashioning new ways of living
