Stay Young at Heart, 1994 **Nutritional Elements and Clinical Biochemistry** Marge A. Brewster, 2012-12-06 The important role that the nutritional status exerts in determining the course of life from birth to death in the human being and especially its impact in disease states is only partially appreciated at this time Nutritional deficiencies are usually considered to be major problems only in under privileged or developing populations except for those occurring in specific diseases This attitude is incorrect as indicated by reports of Bestrian et al 1974 1976 and Merritt and Suskin 1979 and others who found evidence of nutritional depletion in as much as 50% of the patients in varied groups of hospitalized patients in the United States Other studies some of which are included in this book emphasized the existence of deficiencies of certain specific

nutrients Despite evidence of nutritional deficiencies occurring more frequently than previously appreciated there is no well established protocol of laboratory studies that the clinical chemist or scientist should provide to help the physician detect lack of essential nutrients before extensive and possibly irreparable damage has occurred to the individual patient Considerable research data are needed to determine the best biologic material i e erythrocytes leucocytes plasma serum urine cerebrospinal fluid lymph for analysis to determine accurately at an early stage metabolic deficiencies due to a specific nutritional element Improved techniques for analysis of key metabolites and nutrients are available in the research laboratory and many of them can be adapted to the clinical laboratory
