1 Introduction

Let \mathcal{Q}^n be a subset of \mathcal{K}^n , the set of convex bodies in \mathbb{R}^n , and let \mathcal{A} be an abelian semigroup. A function $\Phi: \mathcal{Q}^n \rightarrow \langle \mathcal{A}, + \rangle$ is called a *valuation* if

$$\Phi(K \cup L) + \Phi(K \cap L) = \Phi(K) + \Phi(L) \quad (1.1)$$

for all $K, L \in \mathcal{Q}^n$ with $K \cup L, K \cap L \in \mathcal{Q}^n$. Valuations on convex bodies are a classical concept going back to Dehn's solution in 1900 of Hilbert's Third Problem. Probably the most famous result on valuations is Hadwiger's classification theorem of continuous rigid motion invariant valuations [19]. For detailed information and a historical account on valuations on convex bodies, see [10, 21, 45]. See also [1–3, 11–17, 20, 23–32, 41, 42] for some of the for more recent contributions.

Let K be a compact starshaped subset in \mathbb{R}^n . Its Minkowski functional $\|\cdot\|_K$ is defined by

Symplectic Methods in Harmonic Analysis and in Mathematical Physics Maurice A. de Gosson, 2011-07-30 The aim of this book is to give a rigorous and complete treatment of various topics from harmonic analysis with a strong emphasis on symplectic invariance properties which are often ignored or underestimated in the time frequency literature The topics that are addressed include but are not limited to the theory of the Wigner transform the uncertainty principle from the point of view of symplectic topology Weyl calculus and its symplectic covariance Shubin s global theory of pseudo differential operators and Feichtinger s theory of modulation spaces Several applications to time frequency analysis and quantum mechanics are given many of them concurrent with ongoing research For instance a non standard pseudo differential calculus on phase space where the main role is played by Bopp operators also called Landau operators in the literature is introduced and studied This calculus is closely related to both the Landau problem and to the deformation quantization theory of Flato and Sternheimer of which it gives a simple pseudo differential formulation where Feichtinger s modulation spaces are key actors This book is primarily directed towards students or researchers in harmonic analysis in the broad sense and towards mathematical physicists working in quantum mechanics It can also be read with

profit by researchers in time frequency analysis providing a valuable complement to the existing literature on the topic A certain familiarity with Fourier analysis in the broad sense and introductory functional analysis e g the elementary theory of distributions is assumed Otherwise the book is largely self contained and includes an extensive list of references
