**Handbook of Radioactivity Analysis** Michael F. L'Annunziata, 2012-09-01 The updated and much expanded 3e of the Handbook of Radioactivity Analysis is an authoritative reference providing the principles practical techniques and procedures for the accurate measurement of radioactivity from the very low levels encountered in the environment to higher levels measured in radioisotope research clinical laboratories biological sciences radionuclide standardization nuclear medicine nuclear power and fuel cycle facilities and in the implementation of nuclear forensic analysis and nuclear safeguards The book describes the basic principles of radiation detection and measurement and the preparation of samples from a wide variety of matrices assists the investigator or technician in the selection and use of appropriate radiation detectors and presents state of the art methods of analysis Fundamentals of radiation properties radionuclide decay the calculations involved and methods of detection provide the basis for a thorough understanding of the analytical procedures The Handbook of Radioactivity Analysis 3e is suitable as a teaching text for university and professional training courses The only comprehensive reference that describes the principles of detection and practical applications of every type of radioactivity detector currently used The new 3e is broader in scope with revised and expanded chapters new authors and seven new chapters on Alpha Spectrometry Radionuclide Standardization Radioactive Aerosol Measurements Environmental Radioactivity Monitoring Marine Radioactivity Analysis Nuclear Forensic Analysis and Analytical Techniques in Nuclear Safeguards Discusses in detail the principles theory and practice applied to all types of radiation detection and measurement making it useful for both teaching and research *Handbook of Nuclear Chemistry* Attila Vértes, Sándor Nagy, Zoltán Klencsár, Rezso György Lovas, Frank Rösch, 2010-12-10 This revised and extended 6 volume handbook set is the most comprehensive and voluminous reference work of its kind in the field of nuclear chemistry The Handbook set covers all of the chemical aspects of nuclear science starting from the physical basics and including such diverse areas as the chemistry of transactinides and exotic atoms as well as radioactive waste management and radiopharmaceutical chemistry relevant to nuclear medicine The nuclear methods of the investigation of chemical structure also receive ample space and attention The international team of authors consists of scores of world renowned experts nuclear chemists radiopharmaceutical chemists and physicists from Europe USA and Asia The Handbook set is an invaluable reference for nuclear scientists biologists chemists physicists physicians practicing nuclear medicine graduate students and teachers virtually all who are involved in the chemical and radiopharmaceutical aspects of nuclear science The Handbook set also provides further reading via the rich selection of references **Energy, Waste and the Environment** R. Gieré, Peter Stille, 2004 This book provides incentives for further development of sustainable fuel cycles through a novel and interdisciplinary approach to an Earth science related topic The main focus is on geochemical concepts in immobilizing isolating or neutralizing waste derived from energy

production and consumption The book also addresses the issue of using some types of energy derived waste as alternative raw materials Moreover it highlights research on how certain wastes can be used for energy production an increasingly important aspect of modern integrated waste management strategies The main objectives are to a identify the most serious environmental problems related to various types of power generation and associated waste accumulation b present strategies based on natural analogue materials for the immobilization of toxic and radioactive waste components through mineralogical barriers c discuss modern procedures for reuse of waste or certain waste components and d review the importance of geochemical modelling in describing and predicting the interaction between waste and the environment Ionizing and

Non-ionizing Radiation Adelaja Osibote,2020-01-15 This book provides readers with comprehensive details on the management and measures to protect health against risks to people and environments generated by the use of ionizing and non ionizing radiation This book is divided into three sections namely Radiation Protection and Measurement Radiation Therapy and Radioactivity The first section covers ionizing radiation protection population exposure to non ionizing density and the system of dosimetry quantities for use in emergency preparedness and response to nuclear or radiological accidents The second section covers various planning techniques for spinal stereotactic body radiotherapy and the application of radiation technology in the development of a malaria vaccine The third section discusses environmental radioactivity monitoring using efficient measurements and the assessment of radiation exposure to humans Also in this section is the evaluation of the effects of chronic radiation exposure on the testes of mice after a nuclear power plant accident **Book**

Gillmore,F.E. Perrier,R.G.M. Crockett,2018-05-01 This volume draws together the final outputs of the five year UNESCO IUGS IGCP Project 571 and presents new data on radon in the built and natural environments radon as a diagnostic tool of

geophysical phenomena reflections and recommendations on the future of radon research and a critique of radon's asserted use as a therapy. By considering all the aspects of radon as a health hazard and potential indicator of natural hazards, the project brought together the dispersed research from universities, governmental and non-governmental bodies as well as commercial companies on radon within an interdisciplinary context to facilitate scientific advancement and understanding. Through the establishment of working groups at regional and local levels and the development of research networks, a variety of international meetings were organized and a number of journal special issues published to disseminate the results. The scale of the project was global: scientists from over 20 European countries plus countries in the Americas, Asia and the Middle East have been participants of the project. This volume results from UNESCO IUGS IGCP Project 571 Radon Health and Natural Hazards. Radon has significant socio-economic relevance in the developed and developing worlds, primarily in terms of the indoor radon hazard but also certain geohazards. This volume presents a broad range of papers including methodological, technological and interpretative aspects as well as case study material.
