Morphogenesis An Essay On Development:

Morphogenesis John Tyler Bonner, 1963 **Morphogenesis** John Tyler Bonner, 1965 **Essays on Form in Plants** Claude Wilson Wardlaw, 1968 *On Development* John Tyler Bonner, 1974

On Development is as John Tyler Bonner says a book on ideas the ideas at stake in the contest to unravel the mechanisms of life This fluent discussion of developmental biology synthesizes decades of intensive progress in specialized areas of the science from the dramatic deciphering of the genetic code to detailed analyses of animal behavior patterns Placing these discoveries in an evolutionary context Bonner explores the continuities and the transitoriness of individual lives and individual forms He begins by discussing the ubiquity among organisms of developmental cycles and their universal properties including senescence and death He argues that the life cycle itself is an object of natural selection and shows how in any species it reflects the evolutionary tradeoff between energy requirements of the individual and reproductive efficiency of the species Although nucleic acids are thought to be the ultimate and fundamental source of genetic regulation Bonner points out that a massive amount of information required for normal development is not directly controlled by nuclear DNA during the life cycle Each life cycle is governed by some immediate instructions from the genes and by many gene initiated instructions that were given in previous life cycles and have accumulated in various parts of the fertilized egg All of these instructions taken together govern the development of a new organism Acknowledging the great value of reductionist theories in biology Bonner constructs his synthetic view of development without resorting to vitalist concepts or to hand waving explanations He draws examples and evidence from more than half a century of biological research from sources as diverse as Spemann and Spiegelman Certain organisms such as the cellular slime molds upon which Bonner himself has conducted a number of original experiments and the social insects provide crucial examples of dramatic evolutionary increments in biological complexity and offer insight into the control mechanisms that make such advances possible

Cybernetics and Development Michael J. Apter, 2016-01-22 Cybernetics and Development deals with the ways in which growing and developing biological systems control themselves during development It is a preliminary attempt to apply some of the insights and techniques of cybernetics to the problem of understanding such development and its control The book begins with a discussion of the nature of cybernetics and its methods Separate chapters cover the use of cybernetics in the field of biological development previous work in the area of cybernetics related to automata theory and the application of information theory to development Subsequent chapters present models of development These include computer programs which continually replicate themselves and control the resulting development growing automata nets as models of development and a method that allows a system to control the relative sizes of its parts during development and afterwards during regeneration This book provides enough background material to make it understandable both to the biologist with little knowledge of cybernetics and the cybernetician with no great knowledge of developmental biology

Development and Evolution Stanley N. Salthe, 1993 Development and

Evolution surveys and illuminates the key themes of rapidly changing fields and areas of controversy that the redefining the theory and philosophy of biology It continues Stanley Salthe's investigation of evolutionary theory begun in his influential book *Evolving Hierarchical Systems* while negating the implicit philosophical mechanisms of much of that work Here Salthe attempts to reinitiate a theory of biology from the perspective of development rather than from that of evolution recognizing the applicability of general systems thinking to biological and social phenomena and pointing towards a non Darwinian and even a postmodern biology

The Study of Behavioral Development Joachim F. Wohlwill, 2013-10-22 The Child Psychology Series The Study of Behavioral Development concerns the formulation of general laws of development transcending the realm of the development of the individual from infancy to maturity This book provides a systematic treatment of problems of research design strategy and data analysis that relate specifically to the study of developmental changes in behavior The topics discussed include developmental psychology in the 1970s age variable in psychological research and programmatic view of the task of developmental psychology The problems of measurement and quantification in developmental psychology correlational methods in the study of developmental change and experimental manipulation of developmental change are also elaborated This publication is recommended for psychologists specialists and students learning the nature of behavioral change

The Nature of Order: The process of creating life Christopher Alexander, 2002 This four volume work allows the reader to form one picture of the world in which the perspectives from science beauty and grace and commonsense intuitions are interlaced

Organization Stability and Process C. H. Waddington, 2017-07-05 This is the third penultimate volume in the *Toward a Theoretical Biology* series The contributors agree that there is a major problem in finding methods of dealing with the great complexity of biological systems Molecular biology has given us considerable insight into the nature of the elementary units and processes of life but to understand how these are put together to form systems that are usually too complicated to be analysed completely but exhibit global properties of simplicity presents biologists with an intellectual challenge that physical sciences and chemistry must also face The problem is approached from several different angles quantum physics topology and statistical mechanics A stimulating discussion is recorded that the behaviour of randomly constructed networks exhibits simplicity Thoughtful analyses of complexities in such basic biological processes as the genetic control of differentiation evolution and ecology is also included Some of the questions dealt with are What kinds of theories should we wish to have in connection with developmental biology And have we got them The subject matter of *Organization Stability and Process* is defined as the basic concept of biology None of the contributors herein contained is a molecular biologist in the modern sense but molecular biology casts a shadow over this work at least in so far as they challenge its interpretative aggressiveness and its enthusiastic but unendearing self confidence and self sufficiency This volume inaugurates a new and authentic style of scientific literature The contributions are thoughtful imaginative illuminating and exceptionally well written

Biology Julius Sidney Greenstein, 1972 **A Century in Books** Princeton University Press Staff, 2021-10-12 It all began atop a drugstore in Princeton New Jersey in November 1905 From its modest beginnings Princeton University Press was to become one of the world's most important scholarly publishers embracing a wealth of disciplines that have enriched our cultural academic and scientific landscape Both as a tribute to our authors and to celebrate our centenary Princeton University Press here presents *A Century in Books* This beautifully designed volume highlights 100 of the nearly 8 000 books we have published Necessarily winnowed from a much larger list these books best typify what has been most lasting most defining and most distinctive about our publishing history from Einstein's *The Meaning of Relativity* 1922 to the numerous mathematical and other works that marked the Press's watershed decade of the 1940s including von Neumann and Morgenstern's *Theory of Games and Economic Behavior* from milestones of literary criticism by Erich Auerbach and Northrop Frye to George Kennan's Pulitzer Prize winning book on Soviet American relations from Milton Friedman and Anna Jacobson Schwartz's *A Monetary History of the United States 1867-1960* to more recent landmarks such as L Luca Cavalli Sforza Paolo Menozzi and Alberto Piazza's *The History and Geography of Human Genes* and Robert Shiller's *Irrational Exuberance* In addition to succinct descriptions of the 100 titles and a short introduction on the history of the Press the book features five essays by prominent scholars and writers Michael Wood discusses the impact on Princeton University Press of intellectuals who fled Nazi Germany and authored many influential books Anthony Grafton recounts our rich publishing tradition in history politics and culture Sylvia Nasar traces our evolution into a leading voice in economics publishing Daniel Kevles reflects on Einstein a figure of special importance to Princeton And Lord Robert May writes on our long standing tradition of publishing in mathematics and science *A Century in Books* is more than a celebration of 100 years of publishing at Princeton University Press it is a treasure trove of 100 years of books that have added to the richness of twentieth century intellectual life *The American Journal of Science* , 1958 **The Genesis of Living Forms** Raymond Ruyer, 2019-10-18 The philosophy of Raymond Ruyer was an important if subterranean influence on twentieth century French thought and explicitly engaged with by figures such as Maurice Merleau Ponty Georges Canguilhem Gilbert Simondon and Gilles Deleuze *The Genesis of Living Forms* is Ruyer's most focussed and forceful analysis of a central but apparently paradoxical biological phenomenon that also presents serious problems for philosophy embryogenesis When a cat develops from the early stages of fertilization to an adult what is it that makes it the same cat How is it that a living being can at once be the same and constantly changing Ruyer's answer to these questions unfolds through a detailed set of encounters with major scientific fields from particle physics to social psychology arguing that the paradox can only be dissolved by seeing the role that form plays in the ongoing development of living beings In Ruyer's view embryogenesis is a central problem not just in the life sciences every thing must possess a relation to a form that is characteristic of it from carbon atoms to embryos and to embryologists themselves **Comparative Ecology of Microorganisms and Macroorganisms** John H.

Andrews,2012-12-06 The most important feature of the modern synthetic theory of evolution is its foundation upon a great variety of biological disciplines G L STEBBINS 1968 p 17 This book is written with the goal of presenting ecologically significant analogies between the biology of microorganisms and macroorganisms I consider such parallels to be important for two reasons First they serve to emphasize that however diverse life may be there are common themes at the ecological level not to mention other levels Second research done with either microbes or macroorganisms has implications which transcend a particular field of study Although both points may appear obvious the fact remains that attempts to forge a conceptual synthesis are astonishingly meager While unifying concepts may not necessarily be strictly correct they enable one to draw analogies across disciplines New starting points are discovered as a consequence and new ways of looking at things emerge The macroscopic organisms macroorganisms include most representatives of the plant and animal kingdoms I interpret the term microorganism/microbe literally to mean the small or microscopic forms of life and I include in this category the bacteria the protists excluding the macroscopic green brown and red algae and the fungi Certain higher organisms such as many of the nematodes fall logically within this realm but are not discussed at any length **Dictionary of Theoretical Concepts in Biology** Keith E. Drosophila Eye Development Kevin Moses, 2012-12-06 1 Kevin Moses It is now 25 years since the study of the development of the compound eye in *Drosophila* really began with a classic paper Ready et al 1976 In 1864 August Weismann published a monograph on the development of Diptera and included some beautiful drawings of the developing imaginal discs Weismann 1864 One of these is the first description of the third instar eye disc in which Weismann drew a vertical line separating a posterior domain that included a regular pattern of clustered cells from an anterior domain without such a pattern Weismann suggested that these clusters were the precursors of the adult ommatidia and that the line marks the anterior edge of the eye In his first suggestion he was absolutely correct in his second he was wrong The vertical line shown was not the anterior edge of the eye but the anterior edge of a moving wave of patterning and cell type specification that 112 years later 1976 Ready Hansen and Benzer would name the morphogenetic furrow While it is too late to hear from August Weismann it is a particular pleasure to be able to include a chapter in this Volume from the first author of that 1976 paper Don Ready These past 25 years have seen an astonishing explosion in the study of the fly eye see Fig
