Alpers, Anthony N. Kalloo, Neil Kaplowitz, Chung Owyang, Don W. Powell, 2011-10-13 Over the past twenty years thousands of physicians have come to depend on Yamada s Textbook of Gastroenterology Its encyclopaedic discussion of the basic science underlying gastrointestinal and liver diseases as well as the many diagnostic and therapeutic modalities available to the patients who suffer from them was and still is beyond compare This new edition provides the latest information on current and projected uses of major technologies in the field and a new section on diseases of the liver Plus it comes with a fully searchable CD ROM of the entire content **Biology and Physiology of the Blood-Brain Barrier** Pierre-Olivier Couraud, Daniel Scherman, 2013-06-29 The endothelial cells of the cerebral vasculature constitute together with perivascular elements astrocytes pcricytes basement membrane the blood brain barrier BBB which strictly

limits and specifically controls the exchanges between the blood and the cerebral extracellular space. The existence of such a physical enzymatic and active barrier isolating the central nervous system has broad physiological, biological, pharmacological and pathological consequences, most of which are not yet fully elucidated. The Cerebral Vascular Biology conference CVB 95 was organized and held at the Carre des Sciences in Paris on July 10-12, 1995. Like the CVB 92 conference held in Duluth, Minnesota three years ago, the objectives were to provide a forum for presentation of the most recent progresses and to stimulate discussions in the field of the biology, physiology and pathology of the blood-brain barrier. The Paris conference gathered more than 50 participants, including investigators, basic neuroscientists, physicians and students who actively contributed to the scientific program by their oral or poster presentations. This volume contains a collection of short articles that summarize most of the new data that were presented at the conference. Six thematic parts focus on physiological transports, drug delivery, multidrug resistance, P-glycoprotein, signal transduction at the BBB, interactions between the immune system and the cerebral endothelial cells, and the blood-brain barrier related pathologies in the central nervous system. In addition, two introductory articles present new insights in the rapidly evolving topics of cerebral angiogenesis and gene transfer to the brain.

Seminar on the Biology and Conservation of the Wildcat (Felis Silvestris) Council of Europe, 1993-01-01. In English/French. Parallel title: *Sinaire sur la biologie et conservation du chat sauvage*. *The biology of hypogean fishes*. Romero Aldemaro, 2001-12-31. Hypogean cave artesian fishes have fascinated researchers even before they were described in the scientific literature in 1842. Since then, a number of scientists have used them to justify their own evolutionary ideas, from neo-Lamarckism to neo-Darwinism, from neutral evolution to selectionist approaches. Research in recent years has shown that these fishes are much more complex in their adaptations to the subterranean environment than previously believed. There are those with features expected from living in total darkness: complete blindness and depigmentation, and poor in nutrients, extremely low metabolic rates; others differ very little, if any, from their epigean surface ancestors in their morphology and physiology, but not so in their behavior. Some of them even live in nutrient-rich environments. Actually, one of the most overlooked facets of these animals is that there are more species of hypogean fishes without troglomorphisms (blindness, depigmentation) than with troglomorphic ones. The study of these apparently unadapted fishes is providing new insights into our understanding of the evolution of phenotypic characters, founding effect, behavioral and physiological adaptations. The 86 species of troglomorphic fishes described so far belong to 18 different families, many of which would hardly fit the notion that they were preadapted to conquer the underground environment. Further, many troglomorphic species show very little genotypic differentiation when compared with their putative ancestors, indicating that massive phenotype changes can be achieved via little genetic reorganization, a reorganization that mostly affects regulatory genes. These and many other topics are discussed in this volume containing 29 papers written by 41 authors from 9 countries. Hopefully, this volume will convince many other researchers that hypogean fishes represent a unique opportunity to study a

concept in evolutionary biology that is only superficially understood convergent evolution Aquatic Biodiversity Koen Martens, 2012-12-06 In this age of increased fundamental and applied research on biodiversity no single volume was as yet devoted to the various temporal and spatial aspects of aquatic biodiversity The present book is published in honour of Professor Henri Dumont Ghent Belgium at the occasion of his retirement as Editor in Chief of Hydrobiologia The volume presents a selection of contributions on aquatic biodiversity written by colleagues from the editorial board fellow editors of aquatic journals and former students and collaborators Contributions deal with a wide spectrum of topics related to aquatic biodiversity and cover fields such as actual and palaeolimnology taxonomy and fundamental and applied limnology Even reconnaissance chapters on management and cultural impact of water bodies are included The book combines state of the art contributions in aquatic sciences **Evolutionary Biology** Max Hecht, 2012-12-06 Evolutionary Biology of which this is the nineteenth volume continues to offer its readers a wide range of original articles reviews and commentaries on evolution in the broadest sense of that term The topics of the reviews range from anthropology and behavior to molecular biology and systematics In recent volumes a broad spectrum of articles have appeared on such subjects as natural selection among replicating molecules in vitro mate recognition and the reproductive behavior in *Drosophila* evolution of the monocotyledons species selection and the communication network made possible among even distantly related genera of bacteria by plasmids and other transposable elements Articles such as these often too long for standard journals are the stuff of Evolutionary Biology The editors continue to solicit manuscripts on an international scale in an effort to see that everyone of the many facets of biological evolution is covered Manuscripts should be sent to anyone of the following Max K Hecht Department of Biology Queens College of the City University of New York Flushing New York 11367 Bruce Wallace Department of Biology Virginia Polytechnic Institute and State University Blacksburg Virginia 24061 Ghillian T Prance New York Botanical Garden Bronx New York 10458 The Editors vII Contents 1 Discontinuous Processes in the Evolution of the Bacterial Genome 1 Monica Riley Introduction 1 Internal Rearrangements 2 Large Scale Internal Rearrangements 2 Small Scale Rearrangements Divergence of Duplicate Genes 11 Interactions between Two Genomes 20 Transposons Jumping Genes 20 Plasmids Incorporation into Genomic DNA 23 Encyclopedia of Evolutionary Biology, 2016-04-14 Encyclopedia of Evolutionary Biology Four Volume Set is the definitive go to reference in the field of evolutionary biology It provides a fully comprehensive review of the field in an easy to search structure Under the collective leadership of fifteen distinguished section editors it is comprised of articles written by leading experts in the field providing a full review of the current status of each topic The articles are up to date and fully illustrated with in text references that allow readers to easily access primary literature While all entries are authoritative and valuable to those with advanced understanding of evolutionary biology they are also intended to be accessible to both advanced undergraduate and graduate students Broad topics include the history of evolutionary biology population genetics quantitative genetics speciation life history evolution evolution of sex and mating
