Mortality Of Fish Escaping Trawl Gears Fao Fisheries Technical Paper 478:

Mortality of Fish Escaping Trawl Gears Petri Suuronen, 2005-01-01 Progress has been made in reducing bycatch and discards through improving the selectivity of fishing gear. This publication examines the key factors affecting the stress, injury and mortality of fish arising from fishing processes, particularly when fish escape from trawl equipment. It seeks to identify improved methodological approaches and practices and to consider the design of fishing gears and operations that reduce or eliminate such deaths and to assess the problems associated with estimating the impact of unaccounted fish mortality.

Mortality of Fish Escaping Trawl Gears Petri Suuronen, 2005 Selective fishing has a large potential to reduce bycatch and discards, but it can be justified only if significant numbers of escaping fish survive. Many factors affect the survival of fish escaping from fishing gears, and few studies have adequately explained the full range of stress, injury and mortality that can occur when fish escape from trawl codends under commercial fishing conditions. There are various options available to improve the survival of escapees. Installing escape panels or other sorting devices at strategic positions in a fishing gear can enhance escape and the survival of juveniles and non-target species. Facilitating the voluntary escape of fish through various constructional and operational solutions would increase the likelihood of their survival. In some cases, use of other fishing methods may be an appropriate approach to reducing unaccounted mortality associated with escape. Book jacket

Performance assessment of bycatch and discards governance by regional fisheries management organizations, A third assessment of global marine fisheries discards Food and Agriculture Organization of the United Nations, 2019-02-19 This third update of FAO's global discard estimate adopted the fishery-by-fishery approach employed in the second discards assessment published in 2005. The update included publicly available discard data in the last 20 years to establish a baseline of a time series of global marine fisheries discards. This is essential for monitoring the status and trends of discard management, which is the first step of the ecosystem approach to fisheries management cycle. In addition, the study developed a new fisheries data table incorporating landings data from the FAO Global Capture Production dataset FishStat J from 2010 to 2014, which allocated the landings to over 2 000 fisheries worldwide. The current study estimated that the annual discards from global marine capture fisheries between 2010 and 2014 was 9.1 million tonnes (95% CI 6.7–16.1 million tonnes). About 46 percent (4.2 million tonnes) of total annual discards were from bottom trawls that included otter trawls, shrimp trawls, pair bottom trawls, twin otter trawls and beam trawls. The study included a synthesis of estimates of bycatch and discards of endangered, threatened and protected ETP species. Substantial advances have been made in quantifying fisheries interactions with such species so as to make informed decisions on their protection. However, many challenges remain, especially for small-scale fisheries. The development of standardized data collection techniques, risk-based sampling and sharing of data across agencies and regions will help to identify management priorities and allow implementation and enforcement of mitigation measures. A review of previous research showed that discard practices were often related to a wide range of factors, so it is

difficult to assess the effectiveness of fishery management actions on the amount and practice of discards Many regulations are inconsistently enforced and their implementation is often less strict than intended Piecemeal approaches in many bycatch and discards management measures can result in unintended cross taxa conflicts where regulations designed to reduce bycatch and or discards of one species or species group may increase bycatch and or discards of another Examination of approaches to accounting for and mitigating against pre catch post capture and ghost fishing mortalities demonstrates that an understanding of the relative importance of factors affecting indirect fishing mortality is necessary for estimating total fishing induced mortality and for designing and implementing mitigation measures *Advances in Fisheries Bioeconomics*

Juan Carlos Seijo,Jon G. Sutinen,2018-04-17 Efforts to effectively conserve and manage marine resources are facing increasing complexity of environmental and governance challenges To address some of these challenges this book presents advancements in fisheries bioeconomics research that provides significant ideas for addressing emerging environmental and fisheries management issues *Advances in Fisheries Bioeconomics* gives insights into innovative approaches dealing with these issues as well as novel ideas on changes in fisheries management paradigms With contributions from leading experts in the field this book offers an examination of a number of topics including ecosystem based fisheries management by catch management and discard bans the number of players in the fisheries game the effects of ocean acidification and the trends and impacts of eco labeling and eco certification of fisheries Through integrating resource biology and ecology with the economics of fishers behaviour the authors provide valuable analysis of the current issues in fisheries management This book will be of interest to those on advanced courses in fisheries science natural resource biology and ecology and environmental and natural resource economics It will also appeal to researchers policy makers and advocacy groups around the world

Options to Mitigate Bottom Habitat Impact of Dragged Gears John Willy Valdemarsen,Terje Jørgensen,Arill Engås,2007-01-01 Bottom trawling is a diversified fishing method which uses numerous types of gear designs sizes rigging and operational methods Therefore impact on the bottom habitat will differ among the various bottom trawl fisheries and also to a large extent depend on the bottom conditions in the area fished This document describes the basic principles that can be used to reduce the impact of trawling some of which are already developed as practical solutions and implemented in commercial fisheries Overall however there are presently few examples of low bottom impact trawl gears in use in commercial fisheries These basic mitigation measures aim at reducing pressure on the bottom of various trawl components and minimizing the impacted area while trawling **Challenges and Opportunities for the EU Common Fisheries**

Policy Application in the Mediterranean and Black Sea Simone Libralato,Francesco Colloca,Ali Cemal Gücü,Christos D. Maravelias,Cosimo Solidoro,Sebastián Villasante,Massimiliano Cardinale,2019-01-11 The application of the Common Fisheries Policy CFP in the Mediterranean and Black Sea faces several challenges also because of large ecological economic political and institutional differences across the basin The challenge of CFP application is exacerbated by the legal

administrative situation with large areas outside national EU jurisdictions by the different development of fisheries that result in fleet capacities highly different on opposite shores of some sub basins as well as by uneven monitoring and data availability across the basins that result in situations that hamper sustainable management This book collates analyses related to the application of the principles included in the CFP in Mediterranean and Black Sea including assessments of current status scenario analyses visions of best solutions evaluation of critical hot spots and effects of regionalization of fisheries management The eBook tackles from local to transboundary issues and solutions and provides a broad vision of problems together with important practical solutions for CFP application in the Mediterranean and Black Sea

The Welfare of Fish Tore S. Kristiansen, Anders Fernö, Michail A. Pavlidis, Hans van de Vis, 2020-07-01 This book investigates how fish experience their lives their amazing senses and abilities and how human actions impact their quality of life The authors examine the concept of fish welfare and the scientific knowledge behind the inclusion of fish within the moral circle and how this knowledge can change the way we treat fish in the future In many countries fish are already protected by animal welfare legislation in the same way as mammals but in practice there is still a major gap between how we ethically view these groups and how we actually treat them The poor treatment of fish represents a massive animal welfare problem in aquaculture and fisheries both in terms of the number of animals affected and the severity of the welfare issues Thanks to its interdisciplinary scope this thought provoking book appeals to professionals academics and students in the fields of animal welfare cognition and physiology as well as fisheries and aquaculture management
